## PREDGOVOR

Monografija “Nalazi novca sa viminacijumske nekropole Pećine i njihova uloga u pogrebnom ritualu” predstavlja studiju nastalu u okviru projekta IRS – Viminacium, rimski grad i legijski vojni logor - istraživanje materijalne i duhovne kulture stanovništva primenom najsavremenijih tehnologija daljinske detekcije, geofizike, GIS-a, digitalizacije i 3D vizualizacije (Projekat III 47018) – Ministarstvo prosvete, nauke i tehnološkog razvoja Republike Srbije.

Autori zahvalnost duguju u prvom redu mr. Bojani Borić-Brešković i dr. Miloju Vasiću na nesebičnoj pomoći i korisnim savetima prilikom obrade materijala i izrade monografije. Zahvaljujemo se, takođe, Narodnom muzeju u Požarevcu na ustupljenom materijalu, kao i koleginicama Dragani Spasić-Đurić i Jasmini Živković na njihovom angažovanju prilikom izrade ove studije.

Veliku zahvalnost dugujemo i svim članovima “viminacijumske ekipe”, u prvom redu dr. Miomiru Koraću i dr. Snežani Golubović, na podršci koju su nam pružili.

Autori

## FOREWORD

The monograph “Coin Finds from the Viminacium Necropolis of Pećine and Their Role in Funerary Ritual” presents a study originated within project “Viminacium, roman city and military legion camp – research of material and non-material of inhabitants by using the modern technologies of remote detection, geophysics, GIS, digitalization and 3D visualization” (Project III 47018) – of the Ministry of Education, Science and Technological development of the Republic of Serbia.

Authors owe their gratitude to Bojana Borić-Brešković and Miloje Vasić on their unselfish help and valuable advice during material analyse and publication preparation. We are also gratefull to the Regional Museum of Požarevac on the material they provided, as well as colleagues Dragana Spasić-Đurić and Jasmina Živković on their engagement while producing this study.

We owe enormous gratitude to the members of the Viminacium research team, primarily to Miomir Korać and Snežana Golubović on all support they provided.

Authors

**UVOD\***

Studija predstavlja kontinuitet u sistematskom publikovanju nalaza novca sa viminacijumskih južnih nekropola i pokušaja da se rekonstruiše njihova uloga u pogrebnim ritualima na osnovu različitih kriterijuma. Nakon publikovanja numizmatičkih nalaza sa najstarije nekropole Više Grobalja,<sup>1</sup> logičan sled bio je analiza novca sa nekropola na lokalitetu Pećine. U okviru ovog areala uočene su tri nekropole. Najstarija, istovremena sa nekropolom Više Grobalja, formirana je sredinom 1. veka i na njoj je praktikovano istovremeno sahranjivanje kremiranih i inhumiranih pokojnika. Na drugoj nekropoli sahranjivani su samo spaljeni pokojnici, sa izuzetkom pojave gorbova sa inhumacijom, koji su u svim slučajevima bili dečji. Formirana je na prelazu iz 1. u 2. vek i korišćena je do sredine 3. veka. Do promene pogrebnog rituala, odnosno napuštanja obreda kremacije pokojnika i prestanka korišćenja ovih grobljanskih areala došlo je sredinom 3. veka.<sup>2</sup> Od tada je jedini oblik sahranjivanja na Viminacijumu predstavljala inhumacija. U to vreme formirana je najmlađa nekropola na Pećinama koja je korišćena do sredine 5. veka.<sup>3</sup>

Radi potreba izgradnje TE Kostolac 2 na području južnih nekropola Viminacijuma su od kraja 70-tih do 1990. godine prošlog veka obavljena obimna zaštitna arheološka istraživanja. Tokom pomenutih istraživanja na nekropolama lokaliteta Pećine otkriveno je ukupno 3865 primeraka novca.<sup>4</sup> Od ovog broja za obradu bilo je dostupno 3497 komada (Tabela 1), koji se kreću u rasponu od 32./31. g.s.e. (Marko Antonije) do 423. g.n.e. (Teodosije II).<sup>5</sup> Carsko kovanje zastupljeno je

\* Studija predstavlja rezultat rada na projektu: IRS – Viminacijum, rimski grad i legijski vojni logor – istraživanje materijalne i duhovne kulture, stanovništva, primenom najsavremenijih tehnologija daljinske detekcije, geofizike, GIS-a, digitalizacije i 3D vizualizacije (br. 17018) – Ministarstvo prosvete i obrazovanje Republike Srbije.

**INTRODUCTION\***

The study represents a continuation of the systematic publication of coin finds from Viminacium's southern necropolises and an attempt to reconstruct their role in funerary rituals based on different criteria. After the publication of numismatic finds from the oldest, Više Grobalja necropolis,<sup>1</sup> the next logical step was the analysis of coins from the necropolises at the site of Pećine. Within this area, three necropolises have been noted. The oldest, which is concurrent with the necropolis of Više Grobalja, was established in the mid-1<sup>st</sup> century, where cremation and inhumation burials were simultaneously practised. The second necropolis consisted only of cremation burials, with the exception of some graves containing the inhumed remains of children. It was formed at the turn of the 1<sup>st</sup> and the 2<sup>nd</sup> century and was used until the mid-3<sup>rd</sup> century. The change in the funerary ritual, that is, the abandonment of cremation and the desertion of these cemetery grounds occurred in the mid-3<sup>rd</sup> century.<sup>2</sup> From then, inhumation represented the only form of burial at Viminacium. At that time, the youngest necropolis was established at Pećine, which was in use until the mid-5<sup>th</sup> century.<sup>3</sup>

Due to the required construction of TPP Kostolac 2, from the end of the '70s until 1990, large-scale rescue archaeological investigations were conducted in the area comprising the southern necropolises of Viminacium. In the course of the aforementioned investigations at the necropolises of the site of Pećine, a total of 3,865 specimens were discovered.<sup>4</sup> Of this number, 3,497 coins were available for processing

Table 2 – Distribution of coins at the necropolis based on the location of finding.

sa 84,38% a provincijalno sa 15,58% (Grafikon 1). Poređenjem istih rezultata sa nekropole Više Grobalja uočava se manja razlika u procentima, koji tamo iznose 79,61% (carsko) i 20,30% (provincijalno).<sup>6</sup>

## MESTO NALAZA NOVCA U OKVIRU NEKROPOLE

Na tri nekropole lokaliteta Pećine otkriveno je ukupno 5626 grobova inhumiranih (označenih sa G) i 1153 grobova kremiranih pokojnika (označenih sa G1). Od ukupnog broja numizmatičkih nalaza (3865) u 840 grobova inhumiranih pokojnika pronađeno je 1388 novčića, dok je u 457 grobova kremiranih pokojnika otkriven 541 primerak novca. Iz slojeva, u međuprostoru grobova i sa žrtvenih površina nastalih iznad pojedinačnih ili grupe grobova, potiče 1936 primeraka novca (Tabele 2-3). Usled pomenutog rasipanja novca,<sup>7</sup> u Katalogu je obrađen 1261 primerak novca iz 722 groba inhumiranih i 477 novčića iz

(Table 1), ranging from 32/31 BC (Marcus Antonius) to 423 AD (Theodosius II).<sup>5</sup> Imperial coinage comprises 84.38% and provincial 15.58% (Graph 1). Comparing the same results from the necropolis of Više Grobalja, a small percentage difference is observed, with 79.61% (imperial) and 20.30% (provincial).<sup>6</sup>

## LOCATION OF COIN FINDS WITHIN THE NECROPOLIS

A total of 5,626 inhumation burials (marked as G) and 1,153 cremation burials (marked as G1) were discovered at the three necropolises of the site of Pećine. Of the total number of numismatic finds (3,865), 1,388 coins were recorded in 840 inhumation burials, and 541 coins in 457 cremation burials. 1,936 coins originate from layers, which comprise the spaces between the graves and sacrificial areas formed above individual or groups of graves (Tables 2–3). Due to

istraživanja popisan je tokom 2005. i 2006. godine u Narodnom muzeju u Požarevcu (M. Vojvoda, D. Spasić-Đurić). Konstatovano je da je izvestan broj primeraka izgubljen ili je propao tokom procesa konzervacije (367 kom.). Slično stanje, zatečeno prilikom popisa, zapaženo je i među primercima sa nekropole Više Grobalja – po terenskoj dokumentaciji bilo je pronađeno 3161 primerak, od čega je sačuvano 2736 (cf. Vojvoda, Mrđić 2015: 10, ref. 6). Ovom prilikom ljubazno se zahvaljujemo kolegini Dragani Spasić-Đurić na ustupljenom materijalu i angažmanu.

6 Vojvoda, Mrđić 2015: 10, Tabela 1.

7 Cf. *supra* ref. 5.

5 The entire numismatic material from the aforementioned rescue investigations was inventoried during 2005 and 2006 at the National Museum in Požarevac (M. Vojvoda, D. Spasić-Đurić). It was ascertained that a number of specimens had been lost or were ruined during the process of conservation (367 coins). A similar situation, as encountered during the inventorying, was also observed among specimens from the Više Grobalja necropolis – based on the fieldwork documentation, 3,161 specimens were discovered, of which 2,736 were preserved (cf. Vojvoda, Mrđić 2015: 10, ref. 6). On this occasion kind thanks are due to our colleague Dragana Spasić-Đurić for the material provided and her cooperation.

6 Vojvoda, Mrđić 2015: 10, Table 1.

Pećine	Br. grobova / Number of graves	Broj grobova koji sadrže novac / Number of graves with coins	% grobova koji sadrže novac / % of graves with coins
G	5626	840	14,93
G1	1153	457	39,63
<b>Ukupno / Total</b>	6779	1297	19,13

Tabela 3 – Zastupljenost novca u grobovima.  
Table 3 – Incidence of coins in graves.

411 grobova kremiranih pokojnika, kao i 1759 primeraka iz slojeva sa nekropole.<sup>8</sup>

Od ukupnog broja otkrivenih grobova (6779) na nekropolama lokaliteta Pećine, u njih 1297 konstatovani su novčići kao prilozi. Na taj način procenat zastupljenosti grobova koji su sadržavali numizmatičke nalaze iznosi 19,13% (Tabela 3). Zapaža se da je ovaj procenat daleko manji nego što je to slučaj na nekropoli Više Grobalja, gde iznosi 33,74%.<sup>9</sup>

Posmatrajući odvojeno inhumacije i kremacije uočava se daleko veća procentualna zastupljenost numizmatičkih nalaza kao priloga u grobovima kremiranih pokojnika: 39,63% prema 14,93% u inhumacijama (Tabela 3. Grafikon 2). Analizirajući podatke sa nekropole Više Grobalja dobili smo približno iste procenat zastupljenosti novca u grobovima sa kremacijama (42,82%). Međutim, uočljivo je daleko veće odstupanje kod grobova sa inhumiranim pokojnicima, od kojih je na nekropoli Više Grobalja čak 28,02% sadržavalo novac kao prilog.<sup>10</sup> Zastupljenost grobova (G i G1) u kojima je pronađen novac na nekropoli Pećine (19,13%) kreće se u prosečnim u odnosu na analogne nekropole čije su nam analize poznate.<sup>11</sup> Ovo nije slučaj sa nekropolom

the loss of coins,<sup>7</sup> 1,261 coins from 722 inhumation burials and 477 coins from 411 cremation burials were processed in the Catalogue, including 1,759 specimens recovered from the layers of the necropolis.<sup>8</sup>

Of the total number of discovered graves (6,779) at the necropolises of the Pećine site, coins as grave goods were noted in 1,303 graves. Thus, the percentage of graves that contained numismatic finds amounts to 19.13% (Table 3). It is observed that this percentage is far lower than in the case of the Više Grobalja necropolis, where it amounts to 33.74%.<sup>9</sup>

When observing separately inhumations and cremations, a much higher percentage of numismatic finds as grave goods is seen in cremation burials: 39.63% compared to 14.93% in inhumations (Table 3, Graph 2). Analysing the data from the necropolis of Više Grobalja, about the same percentage of incidence of coins in cremation burials was obtained (42.82%). However, a far greater deviation is observed in inhumation burials, out of which at the necropolis of Više Grobalja 28.02% contained coins as grave goods.<sup>10</sup> The occurrence of graves (G and G1) in which coins were discovered at the Pećine necropolis (19.13%) is within an average range in rela-

8 Prilikom analiza u ovoj studiji koristili smo podatke iz terenske dokumentacije sa ukupnim brojem pronađenih numizmatičkih nalaza (3865) u svim aspektima gde to bude moguće. U svim ostalim analizama koristili smo samo podatke koji su dobijeni obradom preostalog materiala (3497).

9 Vojvoda, Mrđić 2015: 12, Tabela 3.

10 Vojvoda, Mrđić 2015: 12-13, Tabela 3, Grafikon 1.

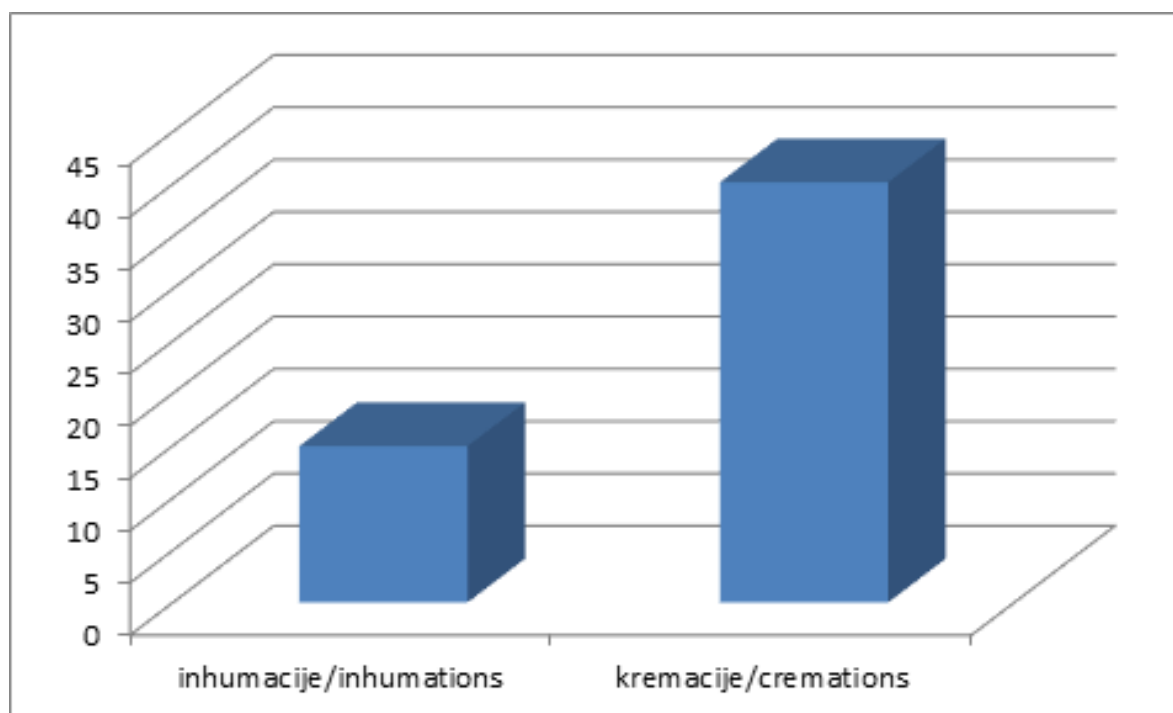

11 Na nekropolama u Brigetiju (Brigetio) se ovaj procenat kreće (za tri nekropole) od 19,54 – 29,46 %; što prosečno

7 Cf. *supra* ref. 5.

8 During the analyses in this study, data from the fieldwork documentation, with the total number of recorded numismatic finds (3,865), was used in all aspects where possible. In all other analyses, only data obtained by processing the remaining material (3,497) was used.

9 Vojvoda, Mrđić 2015: 12, Table 3.

10 Vojvoda, Mrđić 2015: 12-13, Table 3, Graph 1.

Grafikon 2 – Procentualna zastupljenost novca u grobovima.  
/Graph 2 – Percentages of coins in graves.

Više Grobalja gde je ovaj procenat daleko iznad prosečnih (33,74%). Na osnovu toga zaključeno je da je običaj stavljanja novca u grob na Viminacijumu bio poštovan od dela populacije ili približno trećine.<sup>12</sup>

tion to analogous necropolises whose analyses are familiar to us.<sup>11</sup> This is not the case with the Više Grobalja necropolis, where this percentage (33.74%) is far above the average. Based on this it has been concluded that the custom of depositing coins in the grave was practised at Vimina-cium by a part, or approximately a third, of the population.<sup>12</sup>

iznosi 20,16% (cf. Găzduc-Alföldy, Găzduc 2009: 162, Fig. I). Na Emonskim (Emona) nekropolama ova zastupljenost iznosi 14,40% (cf. Petru 1972; Plesničar-Gec 1972; Miškec 2012: 135). Na zapadnim Ptujskim (Petovio) nekropolama ovaj procenat iznosi 18,17% (cf. Istenič 2000: 14-259). U antičkom Singidunumu ovaj procenat iznosi 12,59 (cf. Simić 1997: 46; Pop-Lazić 2002: 19-39). U primeru poslednje tri nekropole navedene procenat treba uzeti sa izvesnom rezervom, s obzirom na nedostatke i nejasnoće dokumentacije sa starih iskopavanja, na koje su naišli potonji istraživači prilikom publikovanja nekropola.

<sup>12</sup> Vojvoda, Mrđić 2015: 13.

<sup>11</sup> At the necropolises at Brigetio, this percentage ranges (for three necropolises) between 19.54 and 29.46%, which, on average, amounts to 20.16% (cf. Găzduc-Alföldy, Găzduc 2009: 162, Fig. I). At the necropolises of Emona, it is 14.40% (cf. Petru 1972; Plesničar-Gec 1972; Miškec 2012: 135). In the western necropolises of Ptuj (Poetovio), this percentage is 18.17% (cf. Istenič 2000: 14-259). In ancient Singidunum, this percentage is 12.59% (cf. Simić 1997: 46; Pop-Lazić 2002: 19-39). In the case of the last three necropolises, the given percentages should be interpreted with some caution due to the deficient and ambiguous documentation from earlier excavations, which subsequent researchers encountered in the process of publishing the necropolises.

<sup>12</sup> Vojvoda, Mrđić 2015: 13.

## ZASTUPLJENOST CARSKOG I PROVINCIJALNOG NOVCA U GROBOVIMA

Ako posmatramo ukupnu zastupljenost carskog i provincijalnog kovanja u grobovima (G i G1), dobijamo da je u najvećoj meri prisutan novac drugog veka, potom četvrtog, trećeg, prvog v.n.e. i prvog v.s.e. (Tabela 4, Grafikon 3).<sup>13</sup> Delimično netačnu sliku zastupljenosti novca 4. v. stvara ukupan broj novčića iz grobova koji je ovde uzet u obzir. Naime od 544 primeraka datovanih u 4. v., čak 331 potiče iz 12 ostava pronađenih u grobovima i jednoj iz slojeva. Uzimajući u obzir izneto, treba istaći da su u tom slučaju ipak u blagoj prednosti grobovi 1. v. (odnos broja grobova i novčića u njima). Ukoliko bi izuzeli novac 4 v. koji potiče iz navedenih 13 ostava, dobili bi smo sliku zastupljenosti po vekovima sličniju onoj na Više Grobalja (2 v. – 1. v. – 3. v. – 4.v.).<sup>14</sup> Odstupanje u ovom poređenju dve nekropole odnosilo bi se na nešto veću ukupnu zastupljenost novca 3. v. na Pećinama u odnosu na Više Grobalja. Sa druge strane, treba istaći, da postojanje ostava koje susrećemo u grobovima 4. v. na Pećinama, nisu registrovane na Više Grobalja.<sup>15</sup> Izvesnu konfuziju u izračunima unosi i činjenica da je terenska dokumentacija tokom istraživanja vođena u celini za Pećine, a ne posebno za svaku od tri uočene nekropole na ovom prostoru. Iz tog razloga velika većina novčića 4. v. sa Pećina potiče ustvari sa najmlađe nekropole formirane sredinom 3. v. koja je bila u upotrebi do sredine 5. v.<sup>16</sup>

13 Izračuni u Tabeli 4 učinjeni su na osnovu sačuvanih i obrađenih primeraka novaca iz grobova (1738).

14 Vojvoda, Mrđić 2015: 13, Grafikon 2.

15 Na nekropoli Više Grobalja zabeležen je samo jedan grob kremiranog pokojnika sa 5 primeraka novca, tri groba inhumiranih pokojnika sa po 7 novčića, jedan sa 8 i jedan sa 13 komada (cf. Vojvoda, Mrđić 2015: 18, Tabela 5).

16 Tokom zaštitnih arheoloških istraživanja na Pećinama terenska dokumentacija (dnevnicu iskopavanja, terenski inventari, kartoni grobova, itd.) i otkriveni material tretirani su kao jedna celina, bez izdvajanja dokumentacije i matrijala za svaku od tri nekropole. Areali tri nekropole uočeni su tokom istraživanja kada je sistem dokumentovanja već bio uveliko korišćen, pa je kao takav i zadržan. Numizmatički material, kao i svi drugi nalazi i danas se čuvaju tematski prema terenskim inventarima, koji ne prate areale tri nekro-

## INCIDENCE OF IMPERIAL AND PROVINCIAL COINS IN GRAVES

Observing the overall incidence of imperial and provincial coinage in graves (G and G1), it can be seen that 2<sup>nd</sup>-century coins are predominant, followed by those from the 4<sup>th</sup>, 3<sup>rd</sup> and 1<sup>st</sup> century AD and the 1<sup>st</sup> century BC (Table 4, Graph 3).<sup>13</sup> A partially inaccurate picture of the incidence of 4<sup>th</sup>-century coins is created by the total number of coins from graves which is here taken into account. Namely, out of 544 specimens dated to the 4<sup>th</sup> century, 331 come from 12 hoards found in graves and one in the layers. Considering this situation, it should be noted that in this case, however, 1<sup>st</sup>-century graves have a slight advantage (the ratio of the number of graves and coins in them). If the 4<sup>th</sup>-century coins from the aforementioned 13 hoards were excluded, the obtained picture of incidence according to century would be more similar to that at Više Grobalja (2<sup>nd</sup> c. – 1<sup>st</sup> c. – 3<sup>rd</sup> c. – 4<sup>th</sup> c.).<sup>14</sup> The discrepancy in this comparison of the two necropolises would relate to a somewhat larger overall incidence of 3<sup>rd</sup>-century coins at Pećine compared to Više Grobalja. On the other hand, it should be noted that the existence of hoards, which are encountered in 4<sup>th</sup>-century graves at Pećine, was not recorded at Više Grobalja.<sup>15</sup> A certain amount of confusion in the calculations is introduced by the fact that field documentation during the investigations was kept for the entirety of Pećine, and not separately for each of the three identified necropolises in the area. In fact, the vast majority of 4<sup>th</sup>-century coins from Pećine actually originate from the youngest necropolis, established in the mid-3<sup>rd</sup> century and in use until the mid-5<sup>th</sup> century.<sup>16</sup>

13 The calculations presented in Table 4 were obtained based on the preserved and processed coins from graves (1,738).

14 Vojvoda, Mrđić 2015: 13, Graph 2.

15 At the necropolis of Više Grobalja, only one cremation grave was noted with 5 coins and, in inhumation graves, three with 7, one with 8 and one with 13 coins (cf. Vojvoda, Mrđić 2015: 18, Table 5).

16 During the rescue archaeological investigations at Pećine, the fieldwork documentation (excavation records, field inventories, grave cards, etc.) and discovered material were treated as one, without separating documentation and

Tabela 4 – Zastupljenost carskog i provincijalnog novca u grobovima po vekovima.  
Table 4 – Incidence of imperial and provincial coins from graves, according to centuries.

Analizirajući izdvojeno carsko kovanje i njegovu zastupljenost po vekovima uočava se procentualni odnos identičan onome na Više Grobalja: 2 v. – 1. v. – 4. v. – 3. v. (u primeru isključivanja iz izračuna novca 4. v. koji potiče iz ostava).<sup>17</sup> Primerci provincijalnog kovanja na nekropoli Pećine pojavljuju se od 1. do 3. veka, sa najvećom zastupljenošću novca 3. v. (83,26%), slede primerci 2. v. (7,40%), 1. v. (3,50%) i neodređeni 1.-3. v. (5,84%). U ovom slučaju beležimo izvesno odstupanje u odnosu na rezultate sa nekropole Više Grobalja gde je provincijsko kovanje 1. v. zastupljeno u većem procentu nego 2. v.<sup>18</sup>

Velika zastupljenost provincijalnog novca u odnosu na carski tokom 3. v. ponovo potvrđuje

pole, već sve tri kao celinu. Istraživanja su obavljanja istovremeno i terenski inventari dnevno određivani po *numerus currens*.

<sup>17</sup> Vojvoda, Mrđić 2015: 15, Grafikon 3.

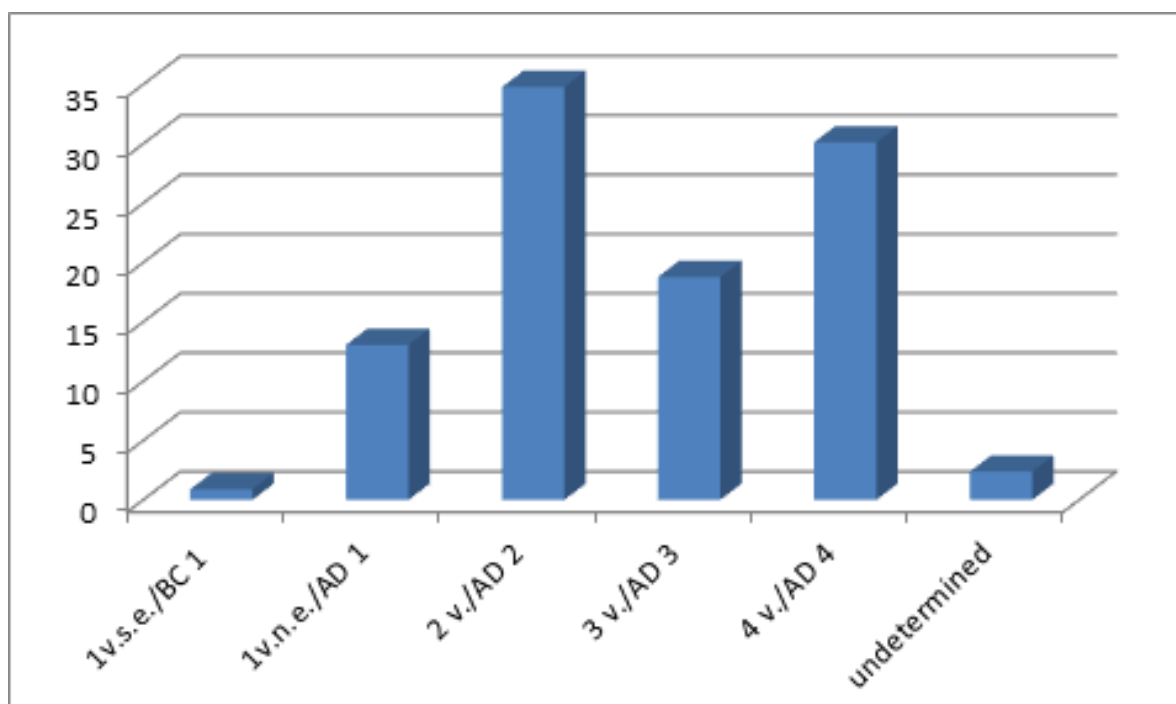

<sup>18</sup> Vojvoda, Mrđić 2015: 15, Grafikon 4.

By separately analysing imperial coinage and its incidence by century, the percentage ratio discerned is identical to that of Više Grobalja: 2<sup>nd</sup> c. – 1<sup>st</sup> c. – 4<sup>th</sup> c. – 3<sup>rd</sup> c. (in the example where 4<sup>th</sup>-century coins from hoards are excluded from the calculation).<sup>17</sup> Specimens of provincial coinage at the necropolis of Pećine appear from the 1<sup>st</sup> to the 3<sup>rd</sup> century, with the highest incidence being that of 3<sup>rd</sup>-century coins (83.26%), followed by specimens from the 2<sup>nd</sup> century (7.40%), 1<sup>st</sup> century (3.50%) and those undetermined from

material for each of the three necropolises. The areas of the three necropolises were observed during the investigations, when the documenting system had already been widely used so, consequently, it was retained. The numismatic material, as well as all other finds, is still kept thematically according to field inventories, which do not follow the individual areas of the three necropolises, but all three as a whole. The investigations were simultaneously conducted and the field inventories determined daily according to *numerus currens*.

<sup>17</sup> Vojvoda, Mrđić 2015: 15, Graph 3.

Grafikon 3 – Procentualna zastupljenost novca (carskog i provincijalnog) iz grobova po vekovima./  
Graph 3 – Percentages of coins (altogether, imperial and provincial) from graves, according to centuries.

više puta iznetu tvrdnju o pomanjkanju sitnog bronzanog novca rimske kovnice u opticaju balkanskih provincija.<sup>19</sup> Ova pojava posebno je bila izražena u Gornjoj Meziji i Donjoj Panoniji počev od Karakaline pa do vladavine Gordijana III. Najveći priliv provincijalnog bronzanog novca zabeležen je u doba Aleksandra Severa, pri čemu je po zastupljenosti na prvom mestu novac bitinijske kovnice Nikeje. Na nekropoli Više Grobalja zabeležena su kovanja 10 maloazijskih i balkanskih provincija sa ukupno 23 kovnice i 555 primeraka. Na nekropoli Pećine između 545 primeraka registrovali smo novac 13 provincija i 27 kovnica: Bitinija – Nikeja (170 kom.), Nikomedija (8), Juliopolis (2), Kalhedon (1); Mizija – Pergam (1); Azija – Taba (3), Antiohija (1); Jonija – Efes (3); Kapadokija – Cezarea (2); Lidija – Atalea (1); Egipat – Aleksandrija (1); Trakija – Serdika (2), Anhial (2), Pautalia (4), Deultum

19 Borić-Brešković 2011: 417-418, ref. 34-49; Војвода, Петровић 2011: 288-289; Војвода, Јесретић 2012: 121-122; Војвода 2013: 159-160; Vojvoda, Mrđić 2015: 14-17, ref 10-13.

the 1<sup>st</sup>-3<sup>rd</sup> century (5.84%). In this case, a certain discrepancy is noted regarding the results from the necropolis of Više Grobalja, where 1<sup>st</sup>-century provincial coinage is more prevalent than that from the 2<sup>nd</sup> century.<sup>18</sup>

The significant occurrence of provincial coins compared to imperial during the 3<sup>rd</sup> century again confirms the repeatedly expressed assertion concerning the deficiency of small bronze coins from the mint of Rome in circulation in the Balkan provinces.<sup>19</sup> This was particularly pronounced in Upper Moesia and Lower Pannonia starting from the reign of Caracalla to the reign of Gordian III. The highest influx of provincial bronze coinage is noted at the time of Alexander Severus, while first place in terms of incidence is taken by coins of the Bithynian mint of Nicaea. At the necropolis of Više Grobalja, coinage of ten Asia Minor and

18 Vojvoda, Mrđić 2015: 15, Graph 4.

19 Borić-Brešković 2011: 417-418, ref. 34-49; Војвода, Петровић 2011: 288-289; Војвода, Јесретић 2012: 121-122; Војвода 2013: 159-160; Vojvoda, Mrđić 2015: 14-17, ref. 10-13.

(1), Bizant (1), Hadrianopolis (3), Filipopolis (2), Perint (2); Donja Mezija – Nikopolis na Dunavu (2); Ahaja – Argos (1); Makedonija – Autonomno kovanje (12), Amfipolis (1), Filipi (1), Stobi (42); Gornja Mezija – Viminacijum (99); Dakija – Sarmizegetuza (3); neodređena kovnica (147); teško oštećeni verovatno provincijalni (27).

Pomenuti nedostatak sitnog bronzanog novca u opticaju nakon zatvaranja kovnice u Stobima u vreme Karakale, bio je i jedan od glavnih razloga za otvaranje provincijske kovnice novca u Viminacijumu 239. g. i nešto kasnije 246. g. kovnice u Dakiji.<sup>20</sup> Periodu do otvaranja kovnice u Viminacijumu pripada 253 primeraka novca sa nekropole Pećine, dok je vremenu od 239. do 255. g. pripisan 181 primerak provincijalnog kovanja.<sup>21</sup> U najvećoj meri prisutan je novac bitinijske kovnice Nikeje (170 kom. ili 32,81% od provincijalnog kovanja), slede primerci kovnice Viminacijum (99 kom. ili 19,11%). Na nekropoli Više grobolja zabeležena je daleko veća procentualna zastupljenost nikejskih izdanja koja iznosi čak 52,25% od provincijalnog kovanja i 10,59% od svih numizmatičkih nalaza sa nekropole. Nikejska izdanja su bez sumnje najčešća provincijska kovanja sa kojima se susrećemo ne samo na Viminacijumu već i u čitavoj Gornjoj Meziji, od druge do četvrte decenije 3. veka. Dosadašnjim proučavanjem nalaza novca Nikeje na teritoriji Srbije, pokazalo se da je njegova najveća koncentracija vezana za Viminacijum, njegovu širu okolinu i Dunavski limes.<sup>22</sup> Pokazuje se da numizmatički nalazi sa Viminacijuma svojim velikim uzorkom, kao i sigurnim mestom nalaza, u najvećoj meri doprinose razrešavanju pitanja granica cirkulacije provincijalnog novca u Carstvu.<sup>23</sup>

Kada je u pitanju zastupljenost carskih kovnica, u okviru identifikovanih primeraka, do vladavine Septimija Severa svi primerci potiču iz rimske kovnice. Računajući primerke novca

Balkan provinces was noted, with a total of 23 mints and 555 coins. At the necropolis of Pećine, among 545 specimens, coins from 13 provinces and 27 mints were recorded: Bithynia – Nicaea (170 coins), Nicomedia (8), Juliopolis (2), Kalchedon (1); Mysia – Pergamon (1); Asia – Tabae (3), Antioch (1); Ionia – Ephesus (3); Cappadocia – Caesarea (2); Lydia – Attalea (1); Egypt – Alexandria (1); Thrace – Serdica (2), Anchialos (2), Pautalia (4), Deultum (1), Byzantium (1), Hadrianopolis (3), Philippopolis (2), Perinthos (2); Lower Moesia – Nicopolis on the Danube (2); Achaia – Argos (1); Macedonia – Autonomous coinage (12), Amphipolis (1), Philippi (1), Stobi (42); Upper Moesia – Viminacium (99); Dacia – Sarmizegetusa (3); undetermined mint (147); badly damaged, probably provincial (27).

The aforementioned lack of small bronze coins in circulation after the closure of the mint in Stobi at the time of Caracalla was one of the main reasons for the opening of a provincial mint in Viminacium in 239 and another, somewhat later, in 246, in Dacia.<sup>20</sup> 253 coins from the necropolis of Pećine belong to the period prior to the opening of the mint in Viminacium, while 181 specimens of provincial coinage are attributed to the period between 239 and 255.<sup>21</sup> The most prevalent are those from the Bithynian mint of Nicaea (170 coins or 32.81% of provincial coinage), followed by specimens of the Viminacium mint (99 coins or 19.11%). At the necropolis of Više Grobalja, a far greater percentage of Nicaean issues was noted, amounting to 52.25% of provincial coinage and 10.59% of all numismatic finds from the necropolis. Nicaean issues are undoubtedly the most common provincial coinage encountered not only at Viminacium but throughout Upper Moesia from the second to the fourth decade of the 3<sup>rd</sup> century. The research conducted so far on Nicaean coin finds in the territory of Serbia has shown that their greatest concentration is connected to Viminacium, its wider surroundings and the Danube Limes.<sup>22</sup> Numismatic finds from Viminacium, with its large sample, as well as the secure find location, have proved to contribute largely

20 Борић-Брешковић 1976: 8; Црнобрња 1981:5-6.

21 Za 84 primeraka provincijalnog kovanja nesigurno je kojem periodu pripadaju.

23 O zastupljenosti provincijalnog novca na nekropolama u susednih provincija, pre svega zapadnih, cf. Fitz 1980: 29-31, Tab. C-D; Istenič 2000: 71, Grob 185; Simić 1997: 46; Pop-Lazić 2002: 19-39.

20 Борић-Брешковић 1976: 8; Црнобрња 1981:5-6.

21 84 specimens of provincial coinage cannot be attributed to any specific period.

22 Војвода, Петровић 2011: 288-289; Војвода, Јесретих 2012: 121-122; Војвода 2013: 159-160; Војвода, Mrđić 2015: 14-17.

od 193. g. i čitav 3. v. registrovano je 11 kovnica, među kojima su ponovo najbolje zastupljene emisije rimske kovnice sa 69,05%. Slede kovnice Siscija (12,18%), Mediolanum (6,09%), Serdika (3,55%) i Kizik sa (3,05%), dok su kovnice Antiohija, Viminacijum, Ticinum, Harkleja, Lugdunum i Tesalonika zastupljeni sa 2 ili manje procenata (Grafikon 4). Među primercima 4. v. registrovano je 13 kovnica, od kojih su daleko najbolje zastupljene emisije kovnice Siscija sa 42,70%, a potom i kovnice Tesalonika sa 28,94%. Slede kovnice Sirmium (6,00%), Konstantinopolj (4,57%), Kizik (4,00%), Herakleja i Akvileja (sa po 3,48%), Rim (2,57%), dok su kovnice Antiohija, Ticinum, Arl, Trijer i Aleksandrija zastupljene sa manje od 2% (Grafkon 4). Od primeraka 5. v. samo je u primeru jednog novčića Teodosija II određena kovnica (Kizik).

## ZASTUPLJENOST NOVCA RAZLIČITIH NOMINALA NA NEKROPOLI

Od ukupnog broja obrađenih novčića (3497) bronzani primerci, uključujući carsko i provincijalno kovanje, zastupljeni su sa 90,20% a srebrni sa 9,80% (Grafikon 5).<sup>24</sup> Među nalazima iz grobova u najvećoj meri prisutni su dupondijusi i asi (41,75%), slede frakcije folisa (22,67%),<sup>25</sup> bronzani provincijalni primerci (15,58%), antoninijani (6,75%), folisi (5,86%), denari i denari suberati (3,00%), sestercijusi (2,91%), dok se ostali nominali (kvadransi, medaljoni, kvinar, silikva) javljaju u malim procentima (Tabela 5). Prisustvo denara i antoninijana, posmatrano po vekovima, narasta od 9 kom. (1. vek), preko 31 (2. vek), do 300 (3. vek). Treba skrenuti pažnju da su u G – 5571 bila pronađena i 4 zlatnika Valentinijana I, koja su nažalost prilikom pljačke Narodnog muzeja u Požarevcu nestala.<sup>26</sup>

24 Izračuni su rađeni na osnovu sačuvanog broja primeraka (3497).

25 Treba skrenuti pažnju da su frakcije folisa (AE2, AE3, AE4) najzastupljeniji nominali u ostavama pronađenim u okviru grobova, te se iz tog razloga pojavljuju u krajnjem zbiru u ovako velikom broju.

26 U pitanju je bio grob slobodno ukopanog pokojnika, položen na leđa, sa rukama prekrštenim na karlici. Pored leve butne kosti i levog skočnog zgloba postavljen je na-

to the resolution of the question of boundaries of provincial coinage circulation in the Empire.<sup>23</sup>

In terms of the incidence of imperial mints, among the identified coins, until the reign of Septimius Severus all specimens originated from the mint of Rome. Taking into account coins from 193 and the entire 3<sup>rd</sup> century, 11 mints were recorded, of which the issues from the mint of Rome are again the most prevalent with a percentage of 69.05%. They are followed by the mints of Siscia (12.18%), Mediolanum (6.09%), Serdica (3.55%) and Cyzicus (3.05%), while the mints of Antioch, Viminacium, Ticinum, Heraclea, Lugdunum and Thessalonica make up 2% or less (Graph 4). Among the 4<sup>th</sup>-century specimens, 13 mints were recorded, of which by far the most dominant are the issues of the mint of Siscia with 42.70%, then those of the mint of Thessalonica with 28.94%, followed by the mints of Sirmium (6.00%), Constantinople (4.57%), Cyzicus (4.00%) Heraclea and Aquileia (with 3.48% each) and Rome (2.57%), while the mints of Antioch, Ticinum, Arles, Trier and Alexandria account for less than 2% (Graph 4). Of the 5<sup>th</sup>-century specimens, the mint was determined only in the case of one coin of Theodosius II (Cyzicus).

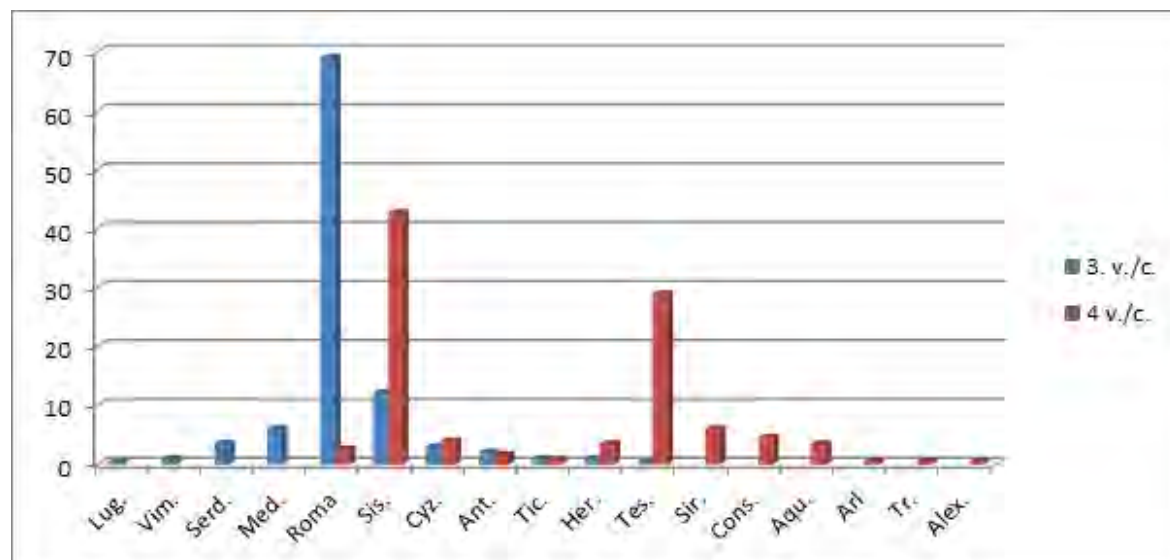

## INCIDENCE OF COINS OF DIFFERENT DENOMINATIONS AT THE NECROPOLIS

Of the total number of coins processed (3,497), bronze specimens, including both imperial and provincial coinage, make up 90.20%, while silver coins amount to 9.80% (Graph 5).<sup>24</sup> Among the finds from graves, the most prevalent are dupondii and asses (41.75%), followed by follis fractions (22.67%),<sup>25</sup> bronze provincial specimens (15.58%), antoniniani (6.75%), folles (5.86%),

23 For the incidence of provincial coinage at necropolises in neighbouring provinces, primarily western, cf. Fitz 1980: 29-31, Tab. C-D; Istenič 2000: 71, Grave 185; Simić 1997: 46; Pop-Lazić 2002: 19-39.

24 The calculations were made based on the preserved number of specimens (3,497).

25 It should be noted that follis fractions (AE2, AE3, AE4) are the most prevalent denominations in hoards discovered within graves, and for this reason comprise such a large proportion of the final total.

Grafikon 4 – Procentualna zastupljenost kovnica tokom 3. i 4. veka.

Graph 4 – Percentage of the Mints during 3<sup>rd</sup> and 4<sup>th</sup> century.

Poredeći zastupljenost nominala u grobnim celinama (G i G1) dobili smo u većini približno iste odnose kao kod računanja ovih procenata uključujući sve numizmatičke nalaze sa nekropole Pećine (G, G1 i sloj). Odstupanja se uočavaju u manjoj prisutnosti denara i sestercijusa u grobovima u odnosu na nalaze iz slojeva na nekropoli. U odnosu na nekropolu Više Grobalja, osim u činjenici da su i na Pećinama najprisutniji dupondijusi i asi, dobili smo sasvim različitu zastupljenost nominala.<sup>27</sup> Na Više Grobalja dupondijusi i asi u grobovima prisutni su sa čak 84,32%, dok je naročito velika razlika uočljiva u znatno manjoj zastupljenosti antoninijana 1,24%, denara i denara suberata 2,14% (Više Grobalja). Takođe je uočljiva daleko veća prisutnost folisa i njegovih frakcija na Pećinama u odnosu na Više Grobalja. Ovi podaci idu u prilog tvrdnji o lociranju najmlađe nekropole na Pećinama, sa čijeg areala očito potiče i najveći broj primeraka novca 4. i početka 5. veka.

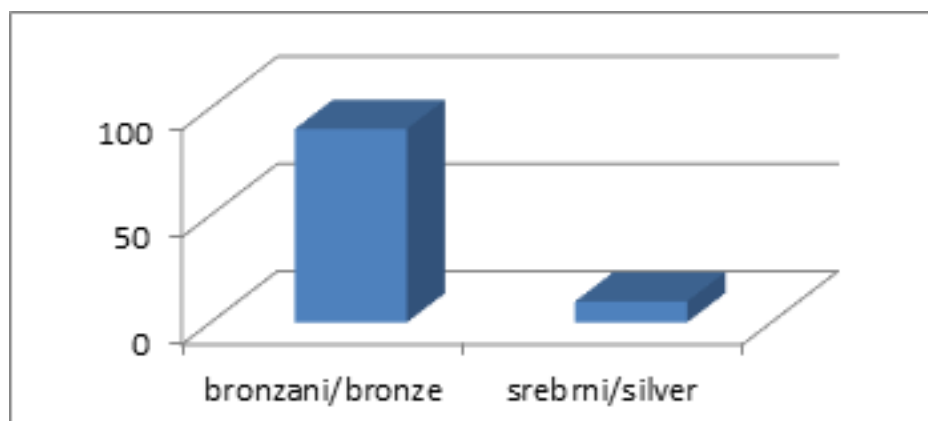

denarii and denarii subaerati (3.00%) and sestertii (2.91%), while other denominations (quadrantes, medallions, quinarii, siliquae) are present in a small percentage (Table 5). The number of denarii and antoniniani, observed by century, increases from 9 coins (1<sup>st</sup> century), to 31 (2<sup>nd</sup> century), and then to 300 (3<sup>rd</sup> century). It should be noted that 4 gold coins of Valentinian I were discovered in G – 5571, which were, unfortunately, later stolen from the National Museum in Požarevac.<sup>26</sup>

Comparing the incidence of denominations in graves (G and G1), approximately the same ratios were obtained as in the calculation of the percentages including all numismatic finds from the necropolis of Pećine (G, G1 and layers). Discrepancies are observed in the less frequent occurrence of denarii and sestertii in graves when compared to the finds from layers at the necropolis. Compared to the necropolis of Više Grobalja, except for the fact that the most prevalent are dupondii and asses at Pećine as well, a completely different picture of the incidence of denomina-

satično po jedan kamen zelenac. Nakon podizanja skeleta, ispod leve polovine karlice pronađeno je četiri zlatnika Valentinijana I. To su ujedno bili i jedini prilozi u grobu (cf. dnevnik terenskih istraživanja: 3761, 3763).

27 Cf. Vojvoda, Mrđić 2015: 18, Tabela 4.

26 This was the grave of an individual interred without a coffin, laid on the back, with the arms crossed on the pelvis. One green-coloured stone was placed edgewise next to the left thigh and one next to the left ankle. After lifting the skeleton, under the left half of the pelvis, four gold coins of Valentinian I were discovered. These were the only grave goods in the grave (cf. fieldwork diary: 3761, 3763).

Grafikon 5 – Procentualna zastupljenost srebrnog i bronзанog novca na nekropoli (carskog i provincijalnog).

Graph 5 – Percentages of the silver and bronze coins at the necropolis (altogether, imperial and provincial).

### **BROJ NOVČIČA KAO PRILOGA U POJEDINAČNIM GROBOVIMA I NJIHOV POLOŽAJ U ODNOSU NA POKOJNIKA**

Na nekropoli Pećine otkriveno je 5626 grobova sa inhumiranim pokojnicima (G), dok je u 840 grobova pronađen novac kao prilog (ukupno 1388 novčića, Tabela 3). U većini grobova koji su sadržavali novac (726) pronađen je po jedan primerak, u 67 grobova otkriveno je po dva novčića, u 17 grobova po tri novčića, u osam grobova po četiri i u pet grobova po pet novčića. Osobnost grobova sa inhumiranim pokojnicima na Pećinama predstavljaju mini ostave i ostave novca druge polovine 3. v. i 4. v. Tako je u dva groba pronađeno po 6 novčića, u po jednom grobu 7 i 8, u tri groba po 9, u po jednom grobu po 10, 11 i 12, u dva groba po 13 novčića, u po jednom grobu 23, 25, 49, 86 i 22 + 88 primeraka novčića (Tabela 6).<sup>28</sup> Pronađena je i jedna ostava od 49 bronžanih novčića koja ne pripada grobnim celinama već slojevima na nekropoli. Na nekropoli Više Grobalja u grobovima inhumiranih pokojnika pronađeno je samo (osim grobova sa 2 do 5 novčića) tri groba sa 7, i po jedan sa 8 i 13 novčića.<sup>29</sup>

28 Od navedenih u pet grobnica u jednoj su pronađene 2 ostave i dodatno pojedinačni nalazi: G – 3971 (22 + 88 + 2). U sledećim grobnicama pored ostava nađeno je još od 2 do 4 kom. novčića: G – 5089 (49 + 4 kom.); G – 4006 (13 + 2); G – 3904 (8 + 3 kom.); G – 4816 (9 + 2).

29 Cf. Vojvoda, Mrđić 2015: 18, Tabela 5.

tions was obtained.<sup>27</sup> At Više Grobalja, dupondii and asses in graves represent 84.32%, while a significant difference is discernable in the much smaller incidence of antoniniani with 1.24% and denarii and denarii subaerati with 2.14% (Više Grobalja). Also, a far greater presence of the follis and its fractions is noticeable at Pećine than at Više Grobalja. This data supports the assertion with regard to the location of the youngest necropolis at Pećine, from where clearly the largest number of coins from the 4<sup>th</sup> and the beginning of the 5<sup>th</sup> century originate.

### **NUMBER OF COINS AS GRAVE GOODS IN INDIVIDUAL GRAVES AND THEIR POSITION IN RELATION TO THE DECEASED**

At the necropolis of Pećine, 5,626 inhumation burials (G) were discovered, and coins as grave goods were noted in 840 graves (total of 1,388 coins, Table 3). In most graves that contained coins (726), a single specimen was found, in 67 graves two coins were discovered, 17 graves had three coins, eight graves had four and five graves contained five coins each. A peculiarity of inhumation graves at Pećine are mini-hoards and hoards of coins from the second half of the 3<sup>rd</sup> and 4<sup>th</sup> century. Thus, two graves contained 6

Tabela 5 – Procentualna zastupljenost nominala iz grobova i slojeva .  
Table 5 – Percentage of coin denominations in graves and layers.

Ukupno je otkriveno 1153 groba sa kremiranim pokojnicima (G1), od kojih je u 457 primera pronađen novac kao prilog (ukupno 541 novčić). U 394 grobu pronađen je jedan novčić kao prilog, u 51 grobu po dva, u 9 grobova po tri i u jednom grobu po 4, 5 i 9 novčića (Tabela 6).

Iz Tabele 6 proizilazi da se na nekropoli Pećine kao prilog u grobovima najčešće pojavljuje po jedan primerak novca, kako u inhumacijama, tako i u kremacijama (86,42% u G i 86,22% u G1). Što je identično rezultatima sa Više Grobalja. Razlika između dve nekropole pojavljuje se kod dva, tri i četiri primerka novca u grobovima, koji su na Više Grobalja osetno bolje zastupljeni u kremacijama nego u inhumacijama.

Analizi položaja novca u grobovima u odnosu na pokojnika, logično bili smo ograničeni samo na grobove sa inhumacijama (G). Pri označavanju položaja novca u grobovima opredelili smo se, kao i u slučaju nekropole Više Grobalja, za svedeni metod koji je predložio Klark (Clarke).<sup>30</sup> On je odredio osam položaja: A – na/oko glave; B – u ustima; C – na/blizu desne ruke i u desnoj šaci; D – na/blizu torzoa; E – na/blizu leve ruke i u levoj šaci; F – na/blizu karlice; G – na/blizu desne noge; H – na/blizu l. noge. Ovoj sistematizaciji položaja dodali smo deveti (G/H – kod/između nogu/stopala) u slučajevima kada je novac pronađen između kolena ili potkolenica pokojnika ili gde na osnovu terenske dokumentacije nije bilo jasno pored koje noge je pronađen novac.<sup>31</sup>

Ako posmatramo posebno grobove koji su sa državali jedan novac kao prilog, proizilazi da je u najvećem broju slučajeva taj novac bio postavljen u usta pokojnika (položaj B – 24,20%). Ako

coins each, one grave was with 7 and one with 8, three graves had 9, one grave each had 10, 11 and 12, two graves were with 13 and one grave each with 23, 25, 49, 86 and 22 + 88 coins (Table 6).<sup>28</sup> A hoard of 49 bronze coins was also discovered, which does not belong to graves, but layers at the necropolis. At the necropolis of Više Grobalja, in inhumation burials (except for those with 2 to 5 coins) only three graves with 7, one with 8 and one with 13 coins were discovered.<sup>29</sup>

A total of 1,153 cremations burials (G1) were found, of which 457 contained coins as grave goods (total of 541 coins). 394 graves had one coin in their inventory, 51 graves contained two, 9 graves had three, one grave was with 4, one grave with 5 and one with 9 coins (Table 6).

As shown in Table 6, at the necropolis of Pećine, a single coin is most commonly encountered as grave goods, in both inhumations and cremations (86.42% in G and 86.22% in G1), which is identical to the results obtained from Više Grobalja. The difference between the two necropolises occurs in the cases of two, three or four coins in graves, which are, at Više Grobalja, noticeably more common in cremations than in inhumations.

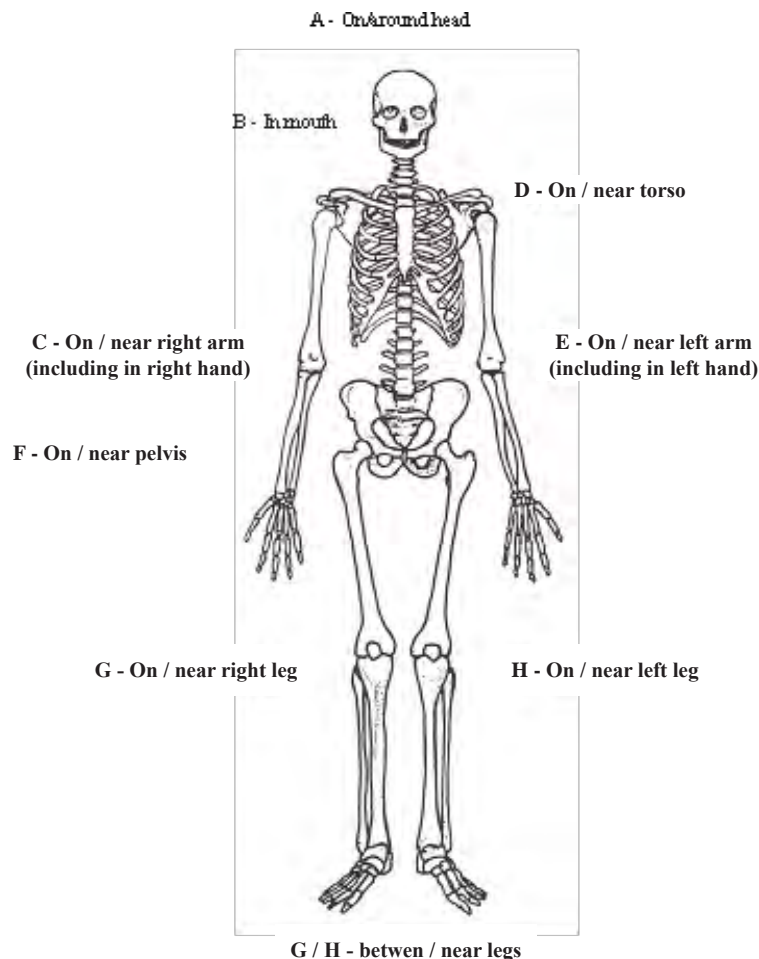

The analysis of the position of coins in graves in relation to the deceased was logically restricted to inhumation graves (G). To mark the position of coins in graves, as in the case of the Više Grobalja necropolis, a reduced method proposed by Clarke

28 Of five tombs, in one, 2 hoards were found along with individual finds: G – 3971 (22 + 88 + 2 + 2). In the other tombs, besides the hoards, an additional 2 to 4 coins were discovered: G – 5089 (49 + 4 coins); G – 4006 (13 + 2); G – 3904 (8 + 3); G – 4816 (9 + 2).

1 Položaji A-H su preuzeti od Klarka (Clarke), dok je položaj G/H, ovom prilikom, dodat sistematizaciji.

2 Položaji A-H su preuzeti od Klarka (Clarke), dok je položaj G/H, ovom prilikom, dodat sistematizaciji.

za sada izuzmemo novac sa nepoznatim mestom nalaza, nakon položaja B sledi po svojoj zastupljenosti novac koji je bio postavljen na ili oko glave pokojnika (položaj A – 15,35%). Proizilazi da je 39,55% nalaza novca u grobovima bilo vezano za područje glave pokojnika.<sup>32</sup> Položaj D (torzo) pojavljuje se sa 10,92%, dok je položaj F (karlica) zastupljen sa 7,34% (Grafikon 6). Ovo su odnosi koji se podudaraju sa analizom grobova sa jednim novcem kao prilogom na nekropoli Više Grobalja (B – A – D – F). Veća razlika

32 Na nekropoli Više Grobalja ovaj procenat je daleko veći i iznosi 58,70%. Međutim međusobni odnosi zastupljenosti pojedinih položaja novčića u grobovima ostaju uglavnom isti za obe nekropole; cf. Vojvoda, Mrđić 2015: 23.

was opted for.<sup>30</sup> He defined eight positions: A – on/around head; B – in mouth; C – on/near right arm and in right hand; D – on/near torso; E – on/near left arm and in left hand; F – on/near pelvis; G – on/near right leg; H – on/near left leg. This systematisation was supplemented with a ninth position (G/H – near/between legs/feet), in cases where coins were located between the knees or lower legs of the deceased or where, based on the fieldwork documentation, it was not clear next to which leg the coins were discovered.<sup>31</sup>

If graves with a single coin in their inventory are considered separately, it is evident that in

Tabela 6 – Zastupljenost novca prema broju primeraka u pojedinačnim grobovima (G i G1).  
 Table 6 – Incidence of coins according to the number of pieces in each grave (G and G1).

Grafikon 6 – Procenat zastupljenosti mesta nalaza novca u grobovima sa jednim novcem kao prilogom.

Graph 6 – Percentage of coins position in graves with one coin in inventory.

kod ovog poređenja dve nekropole pojavljuje se u procentu zastupljenosti grobova kod kojih nije bilo moguće utvrditi položaj priloga u grobu, zbog loše očuvanosti osteološkog materijala, uglavnom, pokojnika dečjeg uzrasta. Ovaj procenat je daleko veći na nekropoli Pećine u odnosu na Više Grobalja (20,20% prema 13,48%).<sup>33</sup>

U primeru grobova sa inhumiranim pokojnicima koji su imali dva novčića (67 grobova) kao prilog registrovano je 25 različitih kombinacija položaja. Na nekropoli Više Grobalja pojavljuje se 19 kombinacija, ali su one zapažene kod znatno manjeg broja grobova uključenih u analizu (39). Na nekropoli Pećine najčešću kombinaciju položaja novčića u grobovima predstavlja A – A (u pet grobova), slede položaji: A – B, A – H i B – F (svaki u po 4 groba) i položaji B – D, D – D, D – F i G/H – G/H (svaki u po 3 groba). Ostali zabeleženi položaji javljaju se uglavnom

most cases the coin was placed in the mouth of the deceased (position B – 24.20%). If coins with an unknown location of finding are excluded, what follows position B, in terms of incidence, are those coins placed on or around the head (position A – 15.35%). Therefore, 39.55% of coin finds in graves relate to the region of the head.<sup>32</sup> Position D (torso) occurs with a percentage of 10.92%, while position F (pelvis) with 7.34% (Graph 6). These ratios correspond to the analysis of graves with a single coin in their inventory at the necropolis of Više Grobalja (B – A – D – F). A larger difference in the comparison of the two necropolises is in the percentage of incidence of graves where it was not possible to determine the position of grave goods due to the poor state of preservation of the osteological material, mainly in those of children. This percentage is much higher at the necropolis of Pećine than it is at Više

<sup>33</sup> Veći broj grobova kod kojih nije bilo moguće odrediti položaj novca u odnosu na skelet pokojnika na nekropoli Pećine u odnosu na Više Grobalja, uticao je na razliku u procentima položaja A i B (39,55% prema 58,70%); cf. Vojvoda, Mrđić 2015: 22-24, Grafikon/Graph 7.

<sup>32</sup> At the necropolis of Više Grobalja, this percentage is much higher, amounting to 58.70%. However, the mutual ratios of incidence of certain positions of coins in graves remain largely the same for both necropolises; cf. Vojvoda, Mrđić 2015: 23.

A – A (5 grobova/ graves)	A – B (4 groba/gra- ves)	A – C (1 grob/grave)	A – F (1 grob/grave)	A – H (4 groba/gra- ves)	
B – B (?) <sup>35</sup> (1 grob/grave)	B – C (1 grob/grave)	B – D (3 groba/gra- ves)	B – E (1 grob/grave)	B – F (4 groba/gra- ves)	B – G/H (1 grob/grave)

Table 7 – Combinations of coins position in graves with two coins in inventory.

samo po jednom ili ređe u po dva groba (Tabela 7). Kod 18 grobova nije bilo moguće odrediti položaj novčića zbog loše očuvanosti osteološkog materijala. Primećujemo da se položaji A i B u različitim kombinacijama pojavljuju u najvećem broju grobova (26), što bi u procentima iznosilo 38,80%. Ovo približno odgovara zbirnom procentu zastupljenosti položaja A i B i kod grobova sa jednim novcem u grobu (39,55%). Kao i u primeru nekropole Više Grobalja, ni ovde ne možemo govoriti o postojanju nekog pravila pri izboru kombinacija postavljanja dva novčića kao priloga u grobove, osim da su uglavnom vezani za predeo glave pokojnika.<sup>34</sup>

U 17 grobova inhumiranih pokojnika prona-

<sup>34</sup> Cf. Vojvoda, Mrđić 2015: 23, 26, Tabela 6.

<sup>35</sup> Položaj B – B u kome bi bila položena dva novčića u usta pokojnika, krajnje je neobičan i odstupa od običaja stavljanja jednog novčića. Položaj je određen na osnovu opisa

Grobalja (20.20% and 13.48% respectively).<sup>33</sup>

In the case of inhumation burials with two coins in their inventory (67 graves), 25 different position combinations were recorded. At the necropolis of Više Grobalja, 19 combinations occur, but they were noted in a much smaller number of graves included in the analysis (39). At the necropolis of Pećine, the most frequent combination of coin positions in graves is A – A (in five graves), followed by: A – B, A – H and B – F (each in 4 graves) and positions B – D, D – D, D – F and G/H – G/H (each in 3 graves). Other recorded positions appear mostly only once or, more rarely,

<sup>33</sup> The greater number of graves in which it was not possible to determine the position of coins in relation to the skeleton at the necropolis of Pećine compared to Više Grobalja affected the difference in percentages of A and B positions (39.55% to 58.70%); cf. Vojvoda, Mrđić 2015: 22-24, Graph 7.

A – A – B (1 grob/grave)	A – B – F (1 grob/grave)	A – E – E (1 grob/grave)

Tabela 8 – Zastupljenost kombinacija položaja nalaza novca u grobovima sa tri novčića kao prilozima.  
Table 8 – Combinations of coins position in graves with three coins in inventory.

đeno je po tri novčića kao prilog, u sedam različitih kombinacija položaja. Pored ovih sedam utvrđenih kombinacija pojavljuje se i određeni broj grobova kod kojih poziciju nije bilo moguće utvrditi (Tabela 8). Kombinacija koja se ponavlja u najvećem broju primera je D – D – D (na grudima pokojnika), a potom i F – F – F (na karlici) u dva groba, dok su ostale zastupljene samo po jednom. Proizilazi da je najviše novčića vezano za predeo torzoa pokojnika (10 novčića u četiri groba), potom za karlicu (7 novčića u tri groba), da bi se položaji A i B (na i oko glave) pojavili 6 puta u tri groba. Na nekropoli Više Grobalja, u grobovima sa tri novčića, novac je u najvećem broju bio vezan za predeo glave, potom nogu i u kombinaciji glava – noge. Treba naglasiti da je na Više Grobalja uzorak bio daleko manji i da su rezultati dobijeni na osnovu pet grobova u kojima je registrovano tri novčića kao prilog.<sup>36</sup>

U osam grobova registrovano je po četiri novčića i to u sedam različitih kombinacija položaja. U najvećem broju grobova (6) svi novčići su nađeni zajedno, u istoj poziciji: C (1 grob), D (jedan grob), F (jedan grob), G (jedan grob) i G/H (dva groba). U primeru dva groba zabeležene su različite pozicije: A – E – G/H – G/H i E – G/H – G/H – G/H. Iz priloženog jasno je da su u grobovima inhumiranih pokojnika sa četiri novčića oni bili većinom pohranjeni pored nogu pokojni-

u dnevniku arheoloških istraživanja: »... na donjoj vilici nađena su dva korozijom spojena novčića...« (cf. dnevnik arheoloških istraživanja: 3416). Ovo bi bio za sada jedini zabeleženi primer položaja B – B na obe nekropole.

36 Vojvoda, Mrđić 2015: 23.

in two graves (Table 7). In 18 graves it was not possible to determine the position of coins due to the poor state of preservation of the osteological material. Positions A and B in different combinations are noted as appearing in the largest number of graves (26), which would amount to 38.80%. This also roughly corresponds to the overall percentage of incidence of positions A and B in graves containing a single coin (39.55%). As in the case of the Više Grobalja necropolis, here it is also not possible to talk about the existence of a pattern in the selection of combinations for the placement of two coins in graves, except that they mainly relate to the region of the head.<sup>34</sup>

In 17 inhumation burials, three coins were discovered in each inventory, in seven different position combinations. In addition to these seven identified combinations, there are a number of graves where the position could not be determined (Table 8). The combination that repeats in the majority of cases is D – D – D (on the chest of the deceased), followed by F – F – F (on the pelvis) in two graves, while others occur only once. Therefore, most coins relate to the region of the torso (10 coins in four graves), then the pelvis (7 coins in three graves), while positions A and B

34 Cf. Vojvoda, Mrđić 2015: 23, 26, Table 6.

35 Position B – B, where two coins would be placed in the mouth of the deceased, is extremely unusual and deviates from the custom of placing one coin. The position was determined based on the description in the fieldwork diary: “... on the lower jaw, two fused coins were discovered...” (cf. fieldwork diary: 3416). This would, so far, be the only recorded example of the B – B position at both necropolises.

ka.<sup>37</sup> Na nekropoli Pećine je samo u pet grobova pronađeno po pet novčića u grobovima kao prilag. Zastupljene su tri kombinacije položaja (D, E i H) i u svakom primeru su novčići nađeni na istom mestu. U primeru dva groba nije bilo moguće ustanoviti poziciju novčića u odnosu na skelet. Na nekropoli Više Grobalja nije otkriven ni jedan grob sa pet novčića, tako da samo tri groba sa nekropole Pećine i to svi sa različitim pozicijama, ne pružaju mogućnosti za izvođenje zaključaka o postojanju nekakvog pravila kod prilaganja ovog broja novčića u grobove.

Kao što je već naglašeno, osobenost nekropole Pećine u odnosu na Više Grobalja, predstavljaju manji ili veći skupni nalazi (ostave) u grobovima. U ovim primerima ne možemo govoriti o nameni plaćanja za prelazak u podzemlje ili tzv. »Haronovom obolu«, već novcu namenjenom za »troškove« na drugom svetu, kao što su *marsupium* ili *crumina*. Mada, izgleda da ostave novca u grobovima 4. v., kao što to potvrđuju i nalazi sa drugih analognih nekropola, predstavljaju pre potvrdu pokojnikovog društvenog statusa i prestiža nego taksu za Harona.<sup>38</sup> Ovi nalazi u svakom slučaju zaslužuju posebnu pažnju. Najpre u pokušaju rekonstrukcije mesta nalaza u okviru grobnih celina i s tim u vezi njihove uloge u pogrebnom ritualu. Sa druge strane posvetićemo se i numizmatičkoj analizi sastava ovih manjih ili većih depoa, u pokušaju utvrđivanja vremena tezauracije, odnosno pokopavanja.<sup>39</sup> Ovde treba uzeti u obzir činjenicu da je većina novčića pronađenih u grobovima, bronzanih, male vrednosti i istrošenih, koji su neko vreme pre prilaganja bili u upotrebi. Bez obzira na to, novac pruža solidan *terminus post quem* za datovanje groba, mada treba u svakom primeru istrošenih novčića računati na najmanje dodatnih 20-30 godina od vremena kovanja do prilaganja.<sup>40</sup> Ovaj problem najizrazi-

(on and around the head) appear 6 times in three graves. At the necropolis of Više Grobalja, in graves with three coins, in most cases they occur in the region of the head, then the legs and in the head – legs combination. It should be noted that the sample at Više Grobalja was much smaller and that the results were obtained based on five graves with three coins in their inventory.<sup>36</sup>

In eight graves with four coins recorded in each, there were seven different position combinations. In most graves (6) all the coins were found together, in the same position: C (1 grave), D (1 grave), F (1 grave), G (1 grave) and G/H (2 graves). In two graves, different positions were noted: A – E – G/H – G/H and E – G/H – G/H – G/H. This clearly shows that in inhumation burials with four coins they were mostly deposited next to the legs.<sup>37</sup> At the necropolis of Pećine, only five graves were found containing five coins as grave goods. Three position combinations were noted (D, E and H) and in each case the coins were all discovered in the same place. In two graves it was not possible to determine the position of the coins in relation to the skeleton. At the necropolis of Više Grobalja, not a single grave with five coins was discovered and, therefore, with only the three graves from the necropolis of Pećine, each with different positions, there is no possibility to draw conclusions about the existence of some pattern in depositing this number of coins in graves.

As has already been pointed out, the peculiarity of the necropolis of Pećine in relation to Više Grobalja is seen in smaller or larger collective finds (hoards) in graves. In these cases, they cannot be regarded as serving the purpose of payment for the transition to the underworld, or the so-called "Charon's obol", but as coins intended for "expenses" in the other world, such as a *marsupium* or *crumina*. However, it appears that coin hoards in 4<sup>th</sup>-century graves, as corroborated by finds from other analogous necropolises, more likely represent an indication of the deceased's social status and prestige rather than a tax for Charon.<sup>38</sup> These finds do, however, deserve special attention, primarily with a view to reconstructing the find location within graves and,

37 Na nekropoli Više Grobalja registrovan je samo jedan grob sa četiri novčića, u čijem primeru nije bilo moguće odrediti poziciju u odnosu na skelet.

38 Clarke 1979: 165-167; Stives 1991: 225-226.

39 Skupni nalazi su izloženi hronološki, a ne prema broju primeraka koji sadrže.

40 Kuk (Cooke) je analizirajući rimske nekropole od sredine 3. do početka 5. v. u zapadnoj Evropi, nalaze novca iz grobova svrstavao u hronološke grupe u rasponu od 30 godina (npr. Period 1 od 240-270. g.; Period 2 od 270. do 300. g. itd.) i na osnovu toga datovao grobove; cf. Cooke 1998: 13.

36 Vojvoda, Mrđić 2015: 23.

37 At the necropolis of Više Grobalja, only one grave with four coins was recorded, in which it was not possible to determine their position in relation to the skeleton.

38 Clarke 1979: 165-167; Stives 1991: 225-226.

tiji je kod grobova sa jednim novčićem, dok je u primeru grobova sa više novčića datovanje svakako sigurnije i približnije realnom datumu pokopavanja. Većina novčića, u grobovima sa više ovakvih priloga, kreće se u hronološkom rasponu od par godina do 25-30 godina. Međutim, na nekropoli Više Grobalja uočeni su i ređi primeri gde je taj raspon daleko veći, što ukazuje na potrebu da se svaka grobna celina mora tretirati posebno.<sup>41</sup> Ostave novca nam zato mogu svojim sastavom, određivanjem vremena tezauracije, kao i na osnovu očuvanosti primeraka, pružiti solidne podatke za datovanje grobova. Ovaj posao olakšan nam je dodatno u primerima gde su pored ostava pronađeni i pojedinačni primerci novca.

Najstariji od pomenutih depozita potiče iz G – 863 i sastoji se od 11 primeraka novčića u rasponu od Marka Aurelija do Gordijana III. U pitanju je dečji grob sa konstrukcijom od opeka i pokrivačem na dve vode. Od skeleta je očuvana samo kalota lobanje na uzglavlju od opeke u istočnom delu konstrukcije. Prilozi, uključujući i 11 novčića, pronađeni su sa leve strane pokojnika (uz južni zid konstrukcije). Usled nejasnoća pri opisivanju groba u dnevniku terenskih istraživanja, ne možemo sa sigurnošću zaključiti gde su se nalazili u odnosu na pokojnika, osim da su svi prilozi u grobu pronađeni približno na istom mestu.<sup>42</sup>

Najveći deo (10 novčića) čine primerci provincijalnog kovanja Nikeje, Nikomedije, Kalhedona i Stobija, dok samo dupondius Marka Aurelija pripada carskom kovanju (kat. 1728). Ovo je ujedno najstariji novac u depou, koji nije bilo moguće odrediti prema referentnim katalozima, ali svakako pripada avgustovskim emisijama Marka Aurelija (161.-180. g.). Sledi bronzani novac Julije Domne kovnice Stobi, datovan od 193.-211. g. (kat. 1729). Jednim primerkom provincijalnog kovanja Nikeje zastupljene su i avgustovske emisije Karakale (kat. 1730). Bitinijskoj kovnici Kalhedon pripada jedan primerak cezarkih emisija Gete (kat. 1731). Sledi četiri novčića emito-

consequently, their role in the funerary ritual. On the other hand, attention will also be dedicated to the numismatic analysis of the content of these smaller or larger hoards in an attempt to determine the time of assemblage in preparation for the burial.<sup>39</sup> What should be taken into account here is the fact that most of the coins found in graves are bronze, of small value and worn, and were in use for some time before being deposited. Nevertheless, coins provide a solid *terminus post quem* for dating graves, although, in every instance of a worn coin, at least an additional 20–30 years from the time of minting to their depositing have to be factored in.<sup>40</sup> This problem is most pronounced in graves with a single coin, while in the case of graves with more coins dating is certainly safer and closer to the real date of burial. The majority of coins, in graves with more such content, are within a chronological range from a couple to 25–30 years. However, at the necropolis of Više Grobalja, rare examples with a much greater range were also noted, which points to the need for each grave to be treated separately.<sup>41</sup> Therefore, hoards of coins, by way of their content, the determination of the time of assemblage and based on the condition of specimens, can provide solid grounds for dating graves. This work is further facilitated in instances where, in addition to the hoards, individual specimens were also discovered.

The oldest of these deposits originates from G – 863 and consists of 11 coins ranging from Marcus Aurelius to Gordian III. This is a child's grave with a brick construction and a dual-pitched cover. The only preserved part of the skeleton is the skull cap on the brick headrest in the eastern part of the construction. The grave goods, including the 11 coins, were found on the left side of the deceased (along the southern wall of the construction). Due to the vagueness of the grave description in the

41 Zabeleženo je nekoliko grobova gde hronološki raspon između najstarijeg i najmlađeg novčića iznosi i do 250 godina; cf. Vojvoda, Mrđić 2015: 28-29.

42 Iz opisa groba u dnevniku terenskih istraživanja ostaje nejasno gde su pronađeni koji od priloga: »Sa spoljne i unutrašnje strane južnog zida nadjeno je: 11 novčića, 3 prstena od bronzane žice, bronzana bula i bronzani poklopac pikside«. Za opis groba cf. dnevnik terenskih istraživanja: 1112.

39 Collective finds are presented chronologically, rather than by the number of specimens they comprise.

40 Cooke, analysing Roman necropolises from the mid-3<sup>rd</sup> to the beginning of the 5<sup>th</sup> century in Western Europe, classified coin finds from graves into chronological groups within a range of 30 years (e.g. Period 1 from 240 to 270; Period 2 from 270 to 300, etc.) and, based on that, dated graves accordingly; cf. Cooke 1998: 13.

41 Several graves were noted with a chronological range between the oldest and the youngest coin of up to 250 years; cf. Vojvoda, Mrđić 2015: 28-29.

Figure 2 - Grave G1-224 (photo documentation of the Institute of Archaeology).

vanih za vladavine Aleksandra Severa, od kojih je jedan kovan za Juliju Mamaeu (kat. 1732-1735). Tri pripadaju izdanjima bitinijske kovnice Nikeje, a jedan kovnici Nikomedija. Ovaj skupni nalaz završava se primercima Gordijana III kovnice Nikeje (kat. 1736-1738). Dupondius Marka Aurelija u ovom mini depou predstavlja relikv neke starije štednje, pošto se preostalih 10 primeraka provincijalnog kovanja kreću u rasponu od Julije Domne i Karakale do Gordijana III. Kako se provincijska izdanja bitinijske kovnice Nikeje za Gordijana III datuju šire, u celu njegovu vladavinu, *terminus post quem* ovog mini depoa kretao bi se u tom hronološkom okviru (238.- 244. g.). Ovi nikejski primerci Gordijana III imaju dobro iskovane i neistrošene reverse, dok je delimična istrošenost aversa pre posledica istrošenosti samog kalupa prilikom kovanja, nego duže cirkulacije novca.

Deset primeraka provincijalnog kovanja Nikeje, Nikomedije i Viminacijuma pronađeno je u G – 1071. Usled površnog opisa groba u terenskoj dokumentaciji, pretpostavljamo da se radi o

fieldwork diary, it cannot be concluded with any certainty where they were located in relation to the deceased, except that all the items in the grave were found approximately in the same place.<sup>42</sup>

The largest part (10 coins) is made up of specimens of provincial coinage of Nicaea, Nicomedia, Kalchedon and Stobi, while only a dupondius of Marcus Aurelius belongs to imperial coinage (cat. 1728). This is also the oldest coin in the hoard, which could not be determined using reference catalogues, but it certainly belongs to the Augustus issues of Marcus Aurelius (161–181). Also present is a bronze coin of Julia Domna from the mint of Stobi, dated to 193–211 (cat. 1729). Augustus issues of Caracalla occur as well, represented by one specimen of provincial coinage of Nicaea (cat. 1730). One specimen from the Caesar issues of Geta belongs to the Bithynian mint of Kalchedon (cat. 1731). Additionally, there are four coins issued during the reign of Alexander Severus, one of which was minted for Julia Mamaea (cat. 1732–1735). Three belong to the issues of the Bithynian mint of Nicaea and one to the mint of Nicomedia. This collective find is completed with specimens of Gordian III from the mint of Nicaea (cat. 1736–1738). The dupondius of Marcus Aurelius in this mini-hoard represents a relic of some older savings, since the remaining 10 specimens of provincial coinage range from Julia Domna and Caracalla to Gordian III. As the provincial issues of the Bithynian mint of Nicaea for Gordian III are dated to a broader period, to his entire reign, the *terminus post quem* of this mini-hoard would fall within this chronological framework (238–244). These Nicaean specimens of Gordian III have well-struck and unworn reverses, whereas the partially worn obverse is probably due to the worn state of the mould used during minting, rather than a long circulation of the coins.

Ten specimens of provincial coinage of Nicaea, Nicomedia and Viminacium were discovered in G – 1071. Due to the superficial description of the grave in the fieldwork documentation, it is assumed that this is a child, interred without a cof-

<sup>42</sup> From the description of the grave in the fieldwork diary, it remains unclear where each of the grave goods were discovered: “On the outer and inner side of the southern wall, the following was noted: 11 coins, 3 bronze wire rings, a bronze bulla and a bronze lid of a pyxis.” For grave description, cf. fieldwork diary: 1112.

slobobno ukopanom pokojniku dečjeg uzrasta.<sup>43</sup> Novac je pronađen zajedno pored glave pokojnika. Najstariji primerak pripada emisijama Elagabala bitinijske kovnice Nikeje (kat. 2927) datovan od 218.-222. g. Slede izdanja Aleksandra Severa: jedan primerak kovnice Nikeje i drugi Nikomedije (kat. 2931, 3091), dok jedan Nikejski primerak pripada emisijama kovanim za Juliju Mamaeu (kat. 3005). Ostalih 6 novčića u ovom depou emitovano je u kovnici Viminacium: Gordijan III (1 kom.; kat. 3206) iz pete godine lokalne ere (243.-244. g.), Filip I (5 kom.; kat. 3213, 3218, 3220, 3222, 3235) iz pete, šeste i sedme godine lokalne ere, tako da je najmlađi primerak datovan u 245.-246. g. Celokupan depo sadrži novac u hronološkom rasponu od približno četvrt veka. S obzirom da najveći broj primeraka pripada izdanjima Filipa I i da su odlično očuvani, možemo pretpostaviti da je *terminus post quem* približan datovanju najmlađih novčića.

Sledeći skupni nalaz datovan u 3. v. potiče iz G – 5089 i sastoji se od 49 primeraka antoninijana u rasponu od zajedničke vladavine Valerijana I i Galijena do Kvintila.<sup>44</sup> U pitanju je grob odrasle osobe, slobodno ukopane, položene na leđa. Ruke su savijene u laktovima i položene na grudi, desna noga je blago savijena u kolenu i potkolenicom prelazi preko leve noge. Na levoj strani karlice pronađeno je 49 antoninijana, koji su očito bili u vrećici koja se raspala. Na grudima je pronađeno dodatnih četiri novčića.<sup>45</sup> Najstariji antoninijan pripada Galijenu iz vremena zajedničke vladavine sa Valerijanom I (kat. 1739). Pripada emisijama azijske kovnice i datovan je od 255-256. g. Istom periodu vladavine pripada konsekrativni primerak kovan za Valerijana II kovnice Rim i datovan u 258. g. (kat. 1740). Sledi 28 antoninijana Galijena koji su kovani za vreme njegove samostalne vladavine od 260.-268.g. (kat. 1741-1768) i dodatna tri, kovana za Saloninu, datovana u isto vreme (kat. 1769-1771). Zastupljena su izdanja kovnica: Rim, Mediolanum

fin.<sup>43</sup> The coins were found together, next to the head. The oldest specimen belongs to the issues of the Bithynian mint of Nicaea, struck for Elagabalus (cat. 2927) and dated to 218–222. Together with these are the issues of Alexander Severus: one specimen from the mint of Nicaea and the other from Nicomedia (cat. 2931, 3091), while one Nicaean coin belongs to the issues minted for Julia Mamaea (cat. 3005). The remaining 6 coins in this hoard were issued at the mint of Viminacium: Gordian III (1 coin; cat. 3206) from the fifth year of the local era (243–244), Philip I (5 coins; cat. 3213, 3218, 3220, 3222, 3235) from the fifth, sixth and seventh year of the local era, and, therefore, the youngest specimen is dated to 245–246. The entire hoard comprises coins in a chronological range of about a quarter of a century. Considering that most specimens belong to the issues of Philip I and are excellently preserved, it can be assumed that the *terminus post quem* is close to the dating of the youngest coins.

The following collective find, dated to the 3<sup>rd</sup> century, comes from G – 5089 and comprises 49 antoniniani, ranging from the joint reign of Valerian I and Gallienus to Quintillus.<sup>44</sup> This is a grave of an adult, interred without a coffin, laid on the back. The arms are bent at the elbows and placed on the chest, the right leg is slightly bent at the knee, with the lower leg crossing over the left leg. On the left side of the pelvis, 49 antoniniani were discovered, which had obviously been in a pouch that had disintegrated. On the chest, an additional four coins were noted.<sup>45</sup> The oldest antoninianus belongs to Gallienus from the time of his joint reign with Valerian I (cat. 1739). It was issued by an Asian mint and is dated to 255–256. A consecration coin struck for Valerian II from the mint of Rome belongs to the same period of reign and is dated to 258 (cat. 1740). Also, there are 28 antoniniani of Gallienus that were minted during his own reign from 260–268 (cat. 1741–1768) and an additional three, struck for Salonina, dated to the same period (cat. 1769–1771).

43 Za opis groba cf. dnevnik terenskih istraživanja: 1352.

44 Ostavu je publikovao B. Drča (Drča 2009: 165-182). Treba napomenuti da se raspored u katalogu prvobitnog publikovanja i ovoj studiji u većoj meri razlikuje.

45 Nažalost ova četiri novčića su izgubljena. Ostaje nam nepoznato da li se takođe radi o antoninijanima ili ne, pošto se u dokumentaciji svi novčići iz groba označavaju kao »bronzani«. Za opis groba cf. dnevnik terenskih istraživanja: 3424.

43 For grave description, cf. fieldwork diary: 1352.

44 The hoard was published by B. Drča (Drča 2009: 165-182). It should be noted that the order in the catalogue of the original publication and in this study differ significantly.

45 Unfortunately, these four coins have been lost. It remains unknown whether they were also antoniniani, since in the documentation all the coins from the grave are designated as "bronze". For grave description, cf. fieldwork diary: 3424.

i Siscija. U nalazu je prisutno i 15 antoninjana Klaudija II od kojih i jedan konsekrativni (kat. 1772-1785). Prisutna su izdanja kovnica Rim i Siscija, datovana od 268.-270. g. Najmlađe primerake čine antoninijan Kvintila iz septembra 270. g. (kat. 1787) i pomenuto konsekrativno izdanje Klaudija II (270. g).<sup>46</sup> Na taj način bi 270. g. predstavljala *terminus post quem* ovog depoa. Hronološki raspon od najstarijeg do najmlađeg antoninjana iznosi 15 g. tako da može predstavljati ličnu ušteđevinu pokojnika. Antoninijani Klaudija II i Kvintila većinom su dobro otkovani, ali sa tragovima upotrebe. U najvećoj meri je istrošen konsekrativni antoninijan Klaudija II, te je verovatno izvesnije pomeriti vreme pohranjivanja u odnosu na datovanje. Dodatnih četiri novčića pronađenih na grudima pokojnika, možda bi mogli pružiti sigurniji odgovor na ovo pitanje, ali su nažalost izgubljeni.

U G – 1176 pronađen je depo od 13 folisa iz vremena vladavine Konstantina I, bilo da su emitovani za samog izdavača ili za njegove sinove.<sup>47</sup> Radi se o grobu slobodno ukopanog pokojnika, položenog na leđa, leva ruka je na karlici, desna nije očuvana, a noge su sastavljene u skočnim zglobovima. Pored desne potkolenice nađeno je zajedno 13 bronzanih folisa.<sup>48</sup> Dva folisa Konstantina I emitovani u kovnici Tesalonika, sa reversnim tipom *gloria exercitus* sa dva standarda, datovani su od 330.-333. i 335.-336. g. a prema razlici u podeli reversne legende (kat. 1928-1929). Sledi pet folisa tipa VRBS ROMA kovnice Tesalonika (kat. 1930-1932), Herakleja (kat. 1933) i kovnice Nikomedija (kat. 1934), svi datovani od 330.-335. g. Sa dva primerka zastupljen je folis tipa CONSTANTINOPOLI, kovnice Konstantinopolj (kat. 1935) i kovnice Nikomedija (kat. 1936), datovani u isto vreme. Preostalih četiri folisa pripada cesarskim emisijama Konstantina II i Konstancija, svi reversnog tipa *gloria exercitus* sa dva standarda. Od toga jedan folis je kovan za Konstantina II u kovnici Tesalonika i datovan u 335.-336. g. (kat. 1937). Dva folisa Konstancija emitovana su u istoj kovnici i datovana u isto vreme (kat. 1938-1939),

Included are issues of the mints of Rome, Mediolanum and Siscia. The find further includes 15 antoniniani of Claudius II, one of which is a consecration coin (cat. 1772–1785). There are also issues of the mints of Rome and Siscia dated to 268–270. The youngest specimens are an antoninianus of Quintillus from September 270 (cat. 1787) and the aforementioned consecration specimen of Claudius II (270).<sup>46</sup> Therefore, the year 270 would represent the *terminus post quem* of this hoard. The chronological range from the oldest to the youngest antoninianus is 15 years, so it could represent the personal savings of the deceased. The antoniniani of Claudius II and Quintillus are mostly well struck, but with traces of use. The consecration antoninianus of Claudius II is most worn, so it is probably more logical to move the time of depositing in relation to the dating. The additional four coins found on the chest of the deceased could maybe provide a safer answer to this question, but unfortunately they have subsequently been lost.

In G – 1176, a hoard of 13 folles from the reign of Constantine I was discovered, issued either for himself or for his sons.<sup>47</sup> This is a grave of an individual interred without a coffin, laid on the back; the left arm is on the pelvis, whilst the right is not preserved, and the legs are placed together at the ankles. Next to the right lower leg, 13 bronze folles were discovered together.<sup>48</sup> Two folles of Constantine I issued at the mint of Thessalonica, with the reverse type *gloria exercitus* with two standards, are dated to 330–333 and 335–336, based on the difference in the reverse legend (cat. 1928, 1929). Additionally, there are five folles of the VRBS ROMA type from the mints of Thessalonica (cat. 1930–1932), Heraclea (cat. 1933) and Nicomedia (cat. 1934), all dated to 330–335. The CONSTANTINOPOLI type follis is represented by two specimens from the mint of Constantinople (cat. 1935) and the mint of Nicomedia (cat. 1936), dated to the same period. The remaining four folles belong to the Caesar issues of Constantine II and Constantius, all with the re-

46 Kvintil je nakon smrti Klaudija II septembra 270. g. proglašen za imperatora, da bi nakon 17 dana, krajem septembra bio ubijen u Akvileji; cf. Kienast 2010: 233.

47 Nalaz je publikovao B. Drča (Drča 2007: 239-248). Napominjemo da se kataloški redosled prvobitnog publikovanja i redosled u Katalogu ove studije razlikuju.

48 Za opis groba cf. dnevnik terenskih istraživanja: 1412.

46 After the death of Claudius II, in September 270, Quintillus was proclaimed emperor, and was, 17 days later, at the end of September, killed in Aquileia; cf. Kienast 2010: 233.

47 The find was published by B. Drča (Drča 2007: 239-248). It should be noted that the catalogue order of the original publication and that of the Catalogue of this study differ.

48 For grave description, cf. fieldwork diary: 1412.

dok poslednji pripada kovnici Konstantinopolj i datovan je od 333.-335. g. Čitav depo čine kovanja od 330. do 336. g. i najverovatnije je sačinjen od novca koji je u vreme sahrane bio u opticaju, jer su primerci odlučno očuvani.

Sledeća ostava koja sadrži 23 frakcije folisa Konstansa i Konstancija pronađena je u G – 2800.<sup>49</sup> U pitanju je grob zidan od tegula, pokojnik je položen na leđa, gornja polovina skeleta je dislocirana prilikom pljačke u antici, in situ su očuvane kosti karlice i nogu; među dislociranim kostima pronađene su perle od staklene paste, dok je ostava pronađena in situ pored desne potkolenice.<sup>50</sup> Svi primerci kovani za Konstansa (14) imaju za reversnu legendu FEL TEMP REPARATIO (car na galiji, drži feniksa na globu i standard sa Hristovm monogramom, galijom krmari Viktorija). Iz kovnice Siscija potiče tri primerka (kat. 1941-1943), dok ostalih 11 pripada emisijama kovnice Tesalonika (kat. 1944-1954), svi su datovani od 348.-350. g. Od 8 primeraka emitovanih za Konstancija tri potiče iz kovnice Siscija, svi su različitog reversnog tipa i datovani su od 348.-351. g. (kat. 1955-1957). Četiri novčića pripada kovnici Tesalonika, a datovani su od 348.-350. g. dok je poslednji emitovan u kovnici Konstantinopolj i datovan je od 348.-351. g. U primeru G – 2800 razlika između najstarijeg i najmlađeg primerka iznosi samo tri godine, tako da je cela ostava mogla biti sačinjena odjednom od novca u opticaju. Pri datovanju treba imati u vidu da je novac dobro očuvan ali sa tragovima korišćenja.

Naredni mini depo sastoji se od 7 primeraka bronzanih novčića pronađenih u G – 3946. U pitanju je grob zidan od opeka, pokojnik je bio položen na leđa sa rukama prekrštenim na stomaku. Oko vrata pronađena je ogrlica sa 44 perle od staklene paste, na desnoj ruci nalazio se bronzani prsten. Novčići su pronađeni zajedno na levom ramenu pokojnika.<sup>51</sup> Postavljanje više novčića na levo rame ili uopšte gornje delove tela je ređa praksa. Ni jedan od novčića nije perforiran, tako da možemo isključiti mogućnost prišivanja na odeću. U nedostatku antropološke analize, a na

verse type *Gloria exercitus* with two standards. One of them is a follis struck for Constantine II at the mint of Thessalonica, dated to 335–336 (cat. 1937). Two folles of Constantius were issued at the same mint and dated to the same period (cat. 1938, 1939), while the last belongs to the mint of Constantinople and is dated to 333–335. The entire hoard comprises coinage from 330 to 336 and was most likely composed of coins that were, at the time of the burial, in circulation, as the specimens are excellently preserved.

The next hoard, which consists of 23 follis fractions of Constans and Constantius, was discovered in G – 2800.<sup>49</sup> This is a grave made of tegulae, with the deceased laid on the back; the upper half of the skeleton was dislocated during a robbery in Antiquity, whilst the bones of the pelvis and legs were preserved in situ; glass paste beads were discovered among the dislocated bones, while the hoard was found in situ next to the right lower leg.<sup>50</sup> All of the specimens minted for Constans (14) have a FEL TEMP REPARATIO reverse legend (emperor on galley, holding phoenix on globe and standard with monogram of Christ, Victory at the helm). Three coins originate from the mint of Siscia (cat. 1941–1943), while the other 11 belong to the mint of Thessalonica (cat. 1944–1954); they are all dated to 348–350. Of the 8 specimens issued for Constantius, three originate from the mint of Siscia, all of which bear a different reverse type and are dated to 348–351 (cat. 1955–1957). Four coins belong to the mint of Thessalonica and are dated to 348–350, while the last was issued at the mint of Constantinople and is dated to 348–351. In G – 2800, the difference between the oldest and the youngest specimen is only three years, so the entire hoard could have been assembled at the same time, from coins in circulation. When dating, it should be noted that the coins are well preserved, but with traces of wear.

The following mini-hoard comprises 7 bronze coins discovered in G – 3946. This is a grave made of bricks, with the deceased laid on the back with the arms crossed on the stomach. Around the neck, a necklace with 44 glass paste beads was discovered, and on the right hand there was

49 Nalaz je publikovao B. Drča (Drča 2005: 131-140). Prvobitni sastav nalaza brojao je 23 primeraka, od kojih je jedan izgubljen. Raspored u katalogu prvobitnog publikovanja i ovoj studiji u većoj meri se razlikuje.

50 Za opis groba cf. dnevnik terenskih istraživanja: 2112-2113.

51 Za opis groba cf. dnevnik terenskih istraživanja: 2847.

49 The find was published by B. Drča (Drča 2005: 131-140). The find initially comprised 23 specimens, one of which has subsequently been lost. The order in the catalogue of the original publication and in this study differ significantly.

50 For grave description, cf. fieldwork diary: 2112-2113.

osnovu druga dva nalaza iz groba, možemo pretpostaviti da se radi o skeletu ženske individue. Gorecki je proučavajući polaganje novca u grobove inhumiranih pokojnika na nekropolama u oblasti između Rajne, Mozele i Some, registrovao samo dva primera polaganja grupe novca na gornjim delovima tela pokojnika. Ostali primeri koje je registrovao, u najvećem broju slučajeva bili su vezani za predo pojasa, kukova i nogu. Zaključio je da su muškarci imali za pojaseve pričvršćene vrećice sa novčićima i da su zato u muškim grobovima ovakvi mali depoi nalaženi u predelu pojasa. Pokojnice, nisu imale ovakve pojaseve pa je novac u njihovim grobovima polagan u kutije ili torbice, postavljane oko ruku, pasa ili nogu.<sup>52</sup> U malobrojnim primerima prisustva grupe novaca u grobovima na nekropoli Više Grobalja, oni su bili vezani za predeo karlice i nogu (u tri primera) i samo u jednom slučaju za ruku.<sup>53</sup>

Ovaj mini depo u svom sastavu ima tri folisa Licinija I, od čega dva potiču iz kovnice Tesalonika i datovani su u 312-313. g. (kat. 1912-1913), dok je treći emitovan u kovnici Siscija između 312-315. g. (kat. 1914). Slede tri folisa Konstantina I od kojih je jedan pripada kovnici Siscija i datovan je u početak 313. g. (kat. 1915), drugi potiče iz kovnice Kizik a emitovan je između 313-315. g. (kat. 1916), dok kod trećeg primera nije bilo moguće utvrditi kovničku oznaku, ali svakako pripada istom vremenu (kat. 1917). Naime, svih 6 folisa imaju istu reversnu legendu – IOVI CONSERVATORI (Jupiter stoji levo, ogrtač preko levog ramena, oslanja se na skipitar, u desnoj ruci drži Viktoriju na globu, kraj nogu je orao sa vencem u kljunu).<sup>54</sup> U odnosu na pomenutih 6 folisa, datovanih od 312.-315. g., postoji veći vremenski hijatus (55-60 godina) do najmlađeg primerka u ovom depou, do frakcije folisa Julijana II (kat. 1918). Ovaj primerak pripada njegovim cesarskim emisijama kovnice Sirmium datovanih od 355.-361. g. Kako grob nije opljačkan i nalaz novca potiče iz zatvorene

a bronze ring. The coins were found together on the left shoulder.<sup>51</sup> Placing more coins on the left shoulder or, generally, the upper parts of the body is a rare practice. None of the coins are perforated, so the possibility of them being sewn onto the clothes can be excluded. In the absence of anthropological analysis, and based on the other two finds from the grave, it can be assumed that this is a female skeleton. Studying the custom of depositing coins in inhumation burials at the necropolises in the region between the Rhine, Moselle and Somme rivers, Gorecki recorded only two examples where a group of coins was laid on the upper parts of the body of the deceased. Other cases that he noted mostly related to the region of the waist, hips and legs. He concluded that males had pouches of coins attached to their belts, and for this reason these small hoards were discovered in male graves in the region of the waist. Females did not have such belts and thus, in their graves, coins were deposited in boxes or small bags, placed around the arms, waist or legs.<sup>52</sup> In a few instances where a group of coins occurred in graves at the necropolis of Više Grobalja, they related to the region of the pelvis and legs (three examples), and only in one instance to the arm.<sup>53</sup>

This mini-hoard contains three folles of Licinius I, two of which originate from the mint of Thessalonica and are dated to 312–313 (cat. 1912, 1913), while the third was issued at the mint of Siscia between 312–315 (cat. 1914). Together with these are three folles of Constantine I, one of which belongs to the mint of Siscia and is dated to the beginning of 313 (cat. 1915), the second comes from the mint of Cyzicus and was issued between 313–315 (cat. 1916), while in the third case it was not possible to determine the mint mark, but it certainly belongs to the same period (cat. 1917). All six folles have the same reverse legend – IOVI CONSERVATORI (Jupiter standing left, with chlamys across left shoulder, leaning on sceptre, holding Victory on a globe in right hand, with eagle with wreath in its beak at his feet).<sup>54</sup> In con-

<sup>52</sup> Gorecki 1975: 250, 255. Mada nije zabeležen položaj na ramenu.

<sup>53</sup> Vojvoda, Mrđić 2015: 26.

<sup>54</sup> U doba dijarhije Konstantina I i Licinija I (maj 313-septembar 324. g.) naročito su bili popularni reversni motivi Sola i Jupitera, a potom i Marsa. Krajem ovog razdoblja sva tri božanstva potpuno nestaju sa novca – Sol posle 319. g. Jupiter posle 324. g. i Mars posle 323. g.; cf. Borić-Brešković, Vojvoda 2013: 216.

<sup>51</sup> For grave description, cf. fieldwork diary: 2847.

<sup>52</sup> Gorecki 1975: 250, 255.

<sup>53</sup> Vojvoda, Mrđić 2015: 26.

<sup>54</sup> At the time of the diarchy of Constantine I and Licinius I (May 313–September 324), particularly popular were reverse motifs of Sol and Jupiter, and then of Mars. At the end of this period, all three deities completely disappeared from coins – Sol after 319, Jupiter after 324 and Mars after 323;

arheološke celine, primerak Julijana II svakako predstavlja polazište za *terminus post quem* ovog mini depoa. Folisi Licinija i Konstantina I odlično su očuvani, a činjenica da svi imaju istu reversnu predstavu i legendu ne može biti slučajna. Možda su pripadali starijoj porodičnoj ušteđevini iz koje su izdvojeni prilikom sahrane. Pridodati primerak Julijana II pokazuje tragove korišćenja, te prilikom datovanja treba ovo uzeti u obzir.

Sledeći mini depo registrovan je u G – 4076. Grob je zidan od tegula, pokojnik je bio položen na leđa, noge su sastavljene u kolenima i skočnim zglobovima, ruke prekrštene na stomaku. Jedini prilog u grobu predstavlja 9 novčića pronađenih zajedno na grudima.<sup>55</sup> Kao i u prethodnom primeru G – 3946, ni jedan od novčića nije perforiran, te i ovde isključujemo mogućnost prišivanja na odeću, i skloni smo pretpostavci da se radilo o torbici ili vrećici postavljenoj na grudi pokojnice. Ovo bi bio drugi primer postavljanja više novčića na gornji deo tela pokojnika na Pećinama, pogotovo što se obe sahrane vezuju za približno isto vreme.

Svi primerci ovog depoa pripadaju vladavini Konstancija, emitovani su za samog izdavača ili za njegove cezare Konstancija Gala i Julijana II. Sedam od njih ima istu reversnu legendu – FEL TEMP REPARATIO (pali konjanik), dok je samo u dva primera zabeležena legenda SPES REIPUBLICAE (Car u vojničkom odelu stoji levo, drži glob i koplje). Svi primerci Konstancija (kat. 1919-1923) datovani su od 355.-361. g. od toga četiri novčića ima za reversni motiv palog konjanika i jedan *Spes reipublice*. Sledi primerak emitovan za Konstancija Gala sa motivom palog konjanika (kat. 1924) datovan od 351.-354. g. Ovo je ujedno najstariji primerak u ovom depou. Cezarske emisije Julijana II zastupljene su takođe jednim primerkom (kat. 1925) datovanim od 355.-361. g. Poslednja dva novčića usled nečitljivosti aversne legende nije bilo moguće odrediti, ali se u svakom slučaju radi o jednom od cezara Konstanciju Galu ili Julijanu II (kat. 1926-1927). Očito je da je ceo mini depo mogao biti sakupljen odjednom od novca u opticaju. Svi primerci su sigurno bili u cirkulaciji bar neko vreme pre pohranjivanja, jer pokazuju tragove korišćenja i sa tim treba računati prilikom datovanja groba.

Druga po brojnosti je ostava iz G – 3079 i sadrži 86 primeraka frakcija folisa u rasponu od Konstansa do cezarskih emisija Julijana II.<sup>56</sup> U

trast to these 6 folles, dated from 312–315, there is a greater span (55–60 years) from the youngest specimen in this hoard to the follis fraction of Julian II (cat. 1918). This specimen belongs to his Caesar issues of the mint of Sirmium, dated to 355–361. As the grave was not robbed and the coin find comes from an undisturbed archaeological unit, the specimen of Julian II certainly represents a starting point for the *terminus post quem* of this mini-hoard. The folles of Licinius and Constantine I are excellently preserved, and the fact that they all have the same reverse depiction and legend cannot be coincidental. Perhaps they belonged to the family's older savings, from which they were selected for the funeral. The added specimen of Julian II shows traces of wear, and when dating, this should be considered.

The next mini-hoard was recorded in G – 4076. The grave was made of tegulae, the deceased was laid on the back, with the legs together at the knees and ankles, and the arms crossed on the stomach. The only grave goods are 9 coins discovered together on the chest.<sup>55</sup> As in the previous example of G – 3946, none of the coins are perforated, so here the possibility of them being sewn onto the clothes can also be excluded and it can be assumed that there was a small bag or a pouch placed on the chest of this female individual. This would be the second example of placing a number of coins on the upper part of the body at Pećine, with both burials related to about the same time.

All the specimens of this hoard belong to the reign of Constantius and were issued either for himself or for his Caesars, Constantius Gallus and Julian II. Seven of them have the same reverse legend – FEL TEMP REPARATIO (fallen horseman), while the SPES REIPUBLICAE legend (emperor in military dress standing left, holding globe and spear) was noted only in two examples. All the specimens of Constantius (cat. 1919–1923) are dated to 355–361, four of which have the reverse motif of a fallen horseman and one – *Spes reipublice*. Next is a coin issued for Constantius Gallus with a fallen horseman motif (cat. 1924), dated to 351–354. This is the oldest specimen in the hoard. Caesar issues of Julian II also occur, represented by one specimen (cat. 1925), dated to 355–361. The final two coins, due to an illegible obverse legend, could not be determined, but do, however, belong to coinage issued

55 Za opis groba cf. dnevnik terenskih istraživanja: 2914.

56 U terenskoj dokumentaciji (dnevniku istraživanja, C –

cf. Borić-Brešković, Vojvoda 2013: 216.

55 For grave description, cf. fieldwork diary: 2914.

pitanju je grob slobodno ukopanog pokojnika, koji je bio položen na leđa. Skelet je dislociran, verovatno kao posledica pljačke u antici, mada se to ne navodi u dnevniku radova. In situ su očuvane kosti trupa i ruku, potkolenice nisu očuvane,<sup>57</sup> kraj lobanje je pronađena ostava novca.

Najstariji primerak pripada izdanjima Konstansa kovnice Siscija, datovan u 347.-348. g. (kat. 1988). Najveći broj novčića u ovoj ostavi (63) pripada emisijama Konstancija. Od ovog broja čak 58 primeraka ima *fel temp reparatio* (pali konjanik) za reversni tip i samo 5 tip *Spes reipublice* (car u vojničkom odelu stoji na levo, drži glob i koplje). Zastupljeno je sedam kovnica: Rim (1 kom.; kat. 1989), Siscia (15; kat. 1990-2004), Sirmijum (11; kat. 2005-2014), Tesalonika (6; 2016-2021), Konstantinopolj (3; kat. 2022-2024), Nikomedija (3; kat. 2025-2027) i Kizik (2; kat. 2028-2029). Svi determinisani primerci datovani su od 355.-361. g. osim jednog novčića kovnice Konstantinopolj (kat. 2022) koji je datovan od 351.-355. g. Kod 21 primerka nije bilo moguće sa sigurnošću odrediti kovničku oznaku (kat. 2030-2051), te su datovani od 350.-361. g. Cezarske emisije Konstancija Gala zastupljene su sa sedam primeraka, od toga dva pripadaju kovnici Siscija (kat. 2052-2053), četiri kovnici Tesalonika (kat. 2054-2057), dok za jedan nije bilo moguće utvrditi kovnicu (kat. 2058). Svi pomenuti primerci imaju za reversni tip palog konjanika i datovani su od 351.-354/5. g. Sledi 11 novčića cezarskih emisija Julijana II, od kojih 8 ima za reversni tip palog konjanika, a tri *Spes reipublice* tip. Zastupljene su kovnice: Rim (1 kom.; kat. 2059), Siscija (1 kom.; kat. 2060), Sirmijum (2; kat. 2061-2062), Tesalonika (1; 2063), dok za šest novčića nije bilo moguće utvrditi kovničku oznaku (kat. 2064-2069). Kod četiri novčića, zbog njihove loše očuvanosti, nije bilo moguće odrediti da li se radi o cezarskim emisijama Konstancija Gala ili Julijana II (kat. 2070-2073). Osim neznatno starijeg primerka Konstansa, najveći broj novčića datovan je u vreme od 355.-361. g. i u celosti pripadaju vladavini Konstancija, što je dobar pokazatelj vremena tezauracije i pohranjivanja. Iako su dobro očuvani svi primerci pokazuju tragove korišćenja, te sva-

kartonima i G – kartonima) zabeleženo je da je pronađeno 85 primeraka novca, a u koverti je pronađeno 86 primeraka.

<sup>57</sup> Iz ovog opisa da se zaključiti da je grob prilikom pljačke otkopan u donjem delu. Za opis groba cf. dnevnik terenskih istraživanja: 2303.

for one of the Caesars, either Constantius Gallus or Julian II (cat. 1926, 1927). It is obvious that the entire mini-hoard could have been assembled at the same time from coins in circulation. All of the coins must have been in circulation for some time before being deposited, as they show traces of use, which should be taken into account when dating the grave.

The second largest is the hoard from G – 3079 and comprises 86 follis fractions, ranging from Constans to Caesar issues of Julian II.<sup>56</sup> This is a grave of an individual interred without a coffin and laid on the back. The skeleton is dislocated, probably as a result of a robbery in Antiquity, although this is not stated in the fieldwork diary. The bones of the torso and arms are in situ, the lower legs are not preserved,<sup>57</sup> and the coin hoard was found next to the skull.

The oldest specimen belongs to the coinage of Constans from the mint of Siscia, and is dated to 347–348 (cat. 1988). The largest number of coins in this hoard (63) belong to the issues of Constantius. Of this number, 58 specimens have a *Fel temp reparatio* (fallen horseman) reverse type and only 5 a *Spes reipublice* type (emperor in military dress standing left, holding globe and spear). Seven mints occur: Rome (1 coin; cat. 1989), Siscia (15; cat. 1990–2004), Sirmium (11; cat. 2005–2014), Thessalonica (6; cat. 2016–2021), Constantinople (3; cat. 2022–2024), Nicomedia (3; cat. 2025–2027) and Cyzicus (2; cat. 2028, 2029). All of the identified specimens are dated to 355–361, except one coin from the mint of Constantinople (cat. 2022), which is dated to 351–355. In 21 specimens, the mint mark could not be determined with any certainty (cat. 2030–2051), so they are dated to 350–361. Caesar issues of Constantius Gallus are represented by seven specimens, two of which belong to the mint of Siscia (cat. 2052, 2053), four to the mint of Thessalonica (cat. 2054–2057), while for one coin it was not possible to determine the mint (cat. 2058). All these specimens have a fallen horseman reverse type and are dated to 351–354/5. Additionally, there are 11 coins from the Caesar issues of Julian II, 8 of which have the reverse type of a fallen horseman, and three the

<sup>56</sup> The fieldwork documentation (fieldwork diary, C-cards and G-cards) notes 85 discovered specimens, while there are actually 86 coins.

<sup>57</sup> From this description it can be concluded that the lower part of the grave was unearthed during the robbery. For grave description, cf. fieldwork diary: 2303.

kako treba računati sa nešto kasnijim vremenom pohranjivanja.

Zanimljiva situacija zabeležena je u G – 3971 i pored toga što je konstrukcija grobnice u velikoj meri razrušena i grobovi opljačkani još u antici. Predstavlja ukopanu grobnicu pravougaone osnove, zidanu od opeka vezanih krečnim malterom, sa poluobličastim svodom i sa ostacima fresko dekoracije.<sup>58</sup> Do nivoa poda vodilo je sedam stepenika, a u donjem delu iskopa grobnice koji je bio ispunjen rastresitom zemljom u visini od 0,80 m, pronađeno je na jednom mestu 22 bronzanih novčića (kat. 1788-1808).<sup>59</sup> Na nivou poda grobnice, neposredno kod ulaza pronađeno je još 88 bronzanih novčića (kat. 1809-1893).<sup>60</sup> U grobnici je obavljeno pet sahrana tri u sarkofazima, jedna u olovnom kovčegu, a jedan pokojnik je slobodno ukopan. Grob A – sahrana u mermernom sarkofagu koji je dva puta obijen, a skelet izbačen van. Pored toga u sarkofagu su kao jedini nalazi otkrivena dva bronzana novčića: Valentinijana I datovan od 364-367. g. (kat. 1652) i Gracijana datovan od 367-375. g. (kat. 1710). Grob B – sahrana u mermernom sarkofagu koji je takođe obijen i skelet izbačen napolje. Jedini nalaz predstavlja fragment opeke sa dečjim crtežom načinjenim u svežoj glini. Grob C – sahrana u sarkofagu od krečnjaka, koji je obijen i kosti izbačene van, bez nalaza. Grob D – sahrana u olovnom kovčegu koji je ukopan ispod nivoa poda grobnice i postavljen u konstrukciju zidanu od opeka. Pod grobnice je uništen prilikom pljačke. U delu olovnog kovčega pronađene su fragmentovane i dislocirane kosti sa tragovima odeće ljubičaste boje ukrašene zlatnim nitima. Grob E – dečji slobodno ukopan, takođe ispod nivoa poda grobnice, lociran uz grob D. Pokojnik je položen na stomak u zgrčenom položaju. Na grudima su pronađena dva novčića: antoninijan Klaudija II datovan od 268-270. g. (kat. 1294) i frakcija folisa Konstancija datovana od 355-361. g. (kat. 1609). U pogledu određivanja redosleda sahra-

*Spes reipublice* type. The following mints occur: Rome (1 coin; cat. 2059), Siscia (1; cat. 2060), Sirmium (2; cat. 2061, 2062) and Thessalonica (1; cat. 2063), while in six coins the mint mark could not be determined (cat. 2064–2069). In four coins, due to their poor state of preservation, it was not possible to determine whether they belong to the Caesar issues of Constantius Gallus or Julian II (cat. 2070–2073). Apart from the slightly older specimen of Constans, the largest number of coins are dated to 355–361 and on the whole belong to the reign of Constantius, which is a good indicator of the time of assemblage and depositing. Although they are well preserved, all the specimens show traces of use, and therefore a somewhat later time of depositing should certainly be considered.

An interesting situation was noted in G – 3971, despite the fact that the construction of the tomb was largely destroyed and the graves robbed as far back as Antiquity. This is a buried tomb of a rectangular base, built from bricks bound with lime mortar, with a barrel vault ceiling and the remains of fresco decoration.<sup>58</sup> There were seven steps leading to the level of the floor, and in the lower part of the tomb's excavation, which was filled with loose soil to a height of 0.80 m, 22 bronze coins were found in one place (cat. 1788–1808).<sup>59</sup> At the floor level of the tomb, right next to the entrance, another 88 bronze coins were discovered (cat. 1809–1893).<sup>60</sup> There were five burials in the tomb, three in sarcophagi, one in a lead coffin, while one individual was interred without a coffin. Grave A – a burial in a marble sarcophagus, which was twice broken into and the skeleton thrown out. Apart from this, the only finds in the sarcophagus were two bronze coins: Valentinian I, dated to 364–367 (cat. 1652) and Gratian, dated to 367–375 (cat. 1710). Grave B – a burial in a marble sarcophagus, which was also broken into and the skeleton thrown out. The only find was a brick fragment with a child's drawing made in fresh clay. Grave C – a burial in a limestone sarcophagus, which was broken into

58 Za opis grobnice cf. dnevnik terenskih istraživanja: 2938-2940.

59 Jedan novčić je izgubljen, tako da je u Katalogu obrađen 21 primerak.

60 Tri novčića su izgubljena, u Katalogu je obrađeno 85 primeraka. Istih 85 primeraka publikovao je B. Drča (Drča 2003: 59-91). Naglašavamo da se kataloški raspored prvobitnog publikovanja u velikoj meri razlikuje od redosleda u Katalogu ove studije.

58 For tomb description, cf. fieldwork diary: 2938-2940.

59 One coin was lost, so 21 specimens were processed in the Catalogue.

60 Three coins were lost, so 85 specimens were processed in the Catalogue. The same 85 coins were published by B. Drča (Drča 2003: 59-91). It should be noted that the catalogue order of the original publication differs significantly from the order in the Catalogue of this study.

njivanja proizilazi da je najpre sažidana ukopana konstrukcija od opeka Groba D u koji je položen olovni kovčeg. Potom su postavljeni sarkofag B i C s obzirom na to da su položeni direktno na zemlju, a ne na podnicu grobnice. Nejasno je iz opisa terenskih istraživanja stanje pod grobnice iznad dečijeg slobodno ukopanog groba E. Ukoliko pod nije otvaran za naknadnu sahranu, sledi da je najpre obavljena ova sahrana i da je usledilo zidanje grobnice i postavljanje poda. Da bi poslednja sahrana bila obavljena u sarkofagu A u kome su i pronađeni mlađi primerci novca (367.-375. g.) nego u grobu E (355.-361. g.). Pre konačnih zaključaka analiziraćemo oba skupna nalaza pronađena u grobnici, a koja očitno nisu bila položena ni u jedan od grobova jer bi u tom slučaju svakako bila plen pljačkaša.

Ostava od 22 primerka sadrži novac od Trajana do Valentinijana I i Valensa. Dva novčića pripadaju 2. veku, jedan trećem, dok 19 spada u 4 v. Najstariji je sestercijus Trajana (kat. 1788) koji nije bilo moguće bliže odrediti, te datovanje ostaje u okviru njegove celokupne vladavine (98-117. g.). Sledi as Antonina Pija datovan u 143-144. g. i antoninijan Aurelijana kovnice Siscia iz 272. do rane 274. g. (kat. 1789-1790). Ovi primerci predstavljaju relikte neke ranije štednje u okviru porodice. Preostalih 19 primeraka kreće se u rasponu od Konstantina II do Valentinijana I / Valensa. Kovanje za Konstantina II kao cezara zastupljeno je jednom folisom kovnice Siscia, datovanom u 334.-335. g. (kat. 1791). Sledi šest frakcija folisa Konstancija koje nije bilo moguće bliže odrediti, pa su datovani od 350.-361. g. (kat. 1792-1797). Jedan primerak pripada Julijanu II i njegovim cezarskim emisijama kovanim pod Konstancijem, datovanim od 355.-361. g. (kat. 1798). Primerak sa revesnim motivom *Spes reipublice*, koji je kovan u isto vreme (kat. 1799), zbog velikog oštećenja aversa nije bilo moguće pripisati izdavaču ili cezaru. Zabeležen je i jedan novčić Valentinijana I kovnice Siscia, datovan od 367.-375. g. (kat. 1800). Sledi četiri bronzanih frakcija folisa Valensa, od kojih jedan potiče iz kovnice Siscia i datovan je od 364.-367. g. (kat. 1801). Drugi pripada emisijama kovnice Tesalonika, a datovan je od 367.-375. g. (kat. 1802). Preostala dva primerka Valensa nisu bliže određena (kat. 1803-1804). U primeru dva bronzana novčića, od kojih jedan predstavlja samo fragment novca, nije bilo moguće utvrditi tačno da li se radi o emisijama Valentinijana I ili Valensa i datovani su od 364.-375./378. g. (?). Poslednja

and the bones thrown out, with no finds. Grave D – a burial in a lead coffin, which was below the floor level of the tomb and laid in a brick construction. The floor of the tomb was destroyed during a robbery. In the lead coffin, fragmented and dislocated bones were discovered with traces of purple-coloured clothes decorated with gold thread. Grave E – a child's burial with no coffin, also below the floor level of the tomb, located next to grave D. The deceased was laid on the stomach in a contorted position. On the chest, two coins were discovered: an antoninianus of Claudius II, dated to 268–270 (cat. 1294) and a follis fraction of Constantius, dated to 355–361 (cat. 1609). With regard to determining the sequence of the burials, it can be concluded that the buried brick construction of grave D, in which the lead coffin was laid, was built first. Sarcophagus B and C were placed after that, since they were laid directly on the soil and not on the flooring of the tomb. The description from the field research does not provide a clear insight into the state of the tomb's floor above the child's grave E. If the floor was not opened for a subsequent burial, then this burial took place first and the building of the tomb and the flooring followed, in order to allow the final burial in sarcophagus A, which contained younger coins (367–375) than those in grave E (355–361). Before any final conclusions, both collective finds from the tomb will be analysed, which were obviously not deposited in any of the graves, as they would have certainly otherwise fallen prey to the robbers.

The hoard of 22 specimens comprises coins from Trajan to Valentinian I and Valens. Two coins belong to the 2<sup>nd</sup> century, one to the 3<sup>rd</sup>, while 19 are from the 4<sup>th</sup> century. The oldest is a sestertius of Trajan (cat. 1788), which could not be determined more accurately, so the dating remains within the scope of his entire reign (98–117). Next is an as of Antoninus Pius, dated to 143–144 and an antoninianus of Aurelian from the mint of Siscia, from 272 to early 274 (cat. 1789, 1790). These coins represent relics of some earlier savings within the family. The remaining 19 specimens range from Constantine II to Valentinian I/Valens. Coinage for Constantine II as Caesar is represented by a follis from the mint of Siscia, dated to 334–335 (cat. 1791). Then, there are six follis fractions of Constantius, which could not be determined more accurately, and are dated to 350–361 (cat. 1792–1797). One specimen belongs to Julian II and his Caesar is-

dva primerka su potpuno nečitljiva, ali prema svemu sudeći pripadaju vremenu druge polovine 4. v. najverovatnije istom vremenu. Iz svega proizilazi da su najmlađi, sigurno datovani primerci, emitovani od 367.-375. g. uz eventualno pomeranje datovanja do kraja vladavine Valensa u 378. g. Dva nečitljiva primerka, kao i jedan izgubljen, ostavljaju mogućnost za moguće korigovanje ovih datuma, ali svakako se ne radi o velikom hronološkom odstupanju. Mada većina novčića pokazuje znakove duže upotrebe i sa tim treba računati pri datovanju.

Najveću ostavu otkrivenu na Pećinama u okviru grobnih celina predstavlja pomenutih 88 bronzanih novčića 4. v. u rasponu od Konstantina I do Gracijana. Najstariji je folis tipa *urbs Roma* Konstantina I kovnice Trijer, datovan u 332.-333. g. (kat. 1809). Svi ostali primerci pripadaju frakcijama folisa. Sledi jedan primerak avgustovskih emisija Konstansa, kovnice Aleksandrija, datovan u 347.-348. g. (kat. 1810). Među izdanjima za Konstancija (kat. 1811-1813) pojavljuju se izdanja tri kovnice: Siscije datovan u 347.-348. g., Kizika datovan u 351.-354. g. i Antiohije datovan u 347.-348. g. Slede cezarske emisije Julijana II datovane od 355.-361. g. iz kovnica Siscija i Kizik (kat. 1814-1816). Za jedan primerak reversnog tipa *Spes reipublice*, zbog loše očuvanosti aversne predstave, nije bilo moguće utvrditi da li pripada Konstanciju ili Julijanu II (kat. 1817). Slede najbrojnija izdanja Valentinijana I (26) i Valensa (39) među kojima se pojavljuju samo dva reversna tipa: GLORIA ROMANORVM (Car korača na desno, desnom rukom vuče zarobljenika, dok u levoj drži *labrum*) i SECVRTAS REIPUBLICAE (Viktorija korača na levo, drži venac i palminu granu). Od izdanja kovanih za Valentinijana I zabeleženo je: pet primeraka kovnice Akvileja, datovanih od 367.-375. g. (kat. 1818-1822); 17 primeraka kovnice Siscija datovanih od 364/367.-367/375. g. (kat. 1823-1839); jedan novčić kovnice Tesalonika datovan od 364.-367. g. (kat. 1840) i tri primerka kod kojih nije bilo moguće utvrditi kovničku oznaku (kat. 1841-1843). Slede najbrojnija izdanja Valensa: tri primeraka kovnice Akvileje datovanih od 367.-375. g. (kat. 1844-1846); 16 primeraka kovnice Siscije datovanih od 364/367.-367/375. g. (kat. 1847-1862); 8 novčića emitovanih u kovnici Tesalonika datovanih od 364.-367. g. (kat. 1863-1870); tri primerka kovnice Konstantinopolis datovanih od 364.-375. g. (kat. 1871-1873); jedan primerak kovnice Antiohija datovan 364.-

sues minted under Constantius, dated to 355–361 (cat. 1798). A specimen with a *Spes reipublice* reverse motif, which was minted at the same time (cat. 1799), due to the badly damaged obverse, could not be attributed to an issuer or a Caesar. One coin of Valentinian I from the mint of Siscia was also recorded, dated to 367–375 (cat. 1800). Additionally, there are four bronze follis fractions of Valens, one of which is from the mint of Siscia and dated to 364–367 (cat. 1801). The second belongs to the issues of the mint of Thessalonica and is dated to 367–375 (cat. 1802). The remaining two specimens of Valens were not more accurately determined (cat. 1803, 1804). In the case of two bronze coins, one of which is only a coin fragment, it was not possible to determine definitively whether they belong to the issues of Valentinian I or Valens, and they are dated to 364–375/378 (?). The last two specimens are completely illegible, but in all likelihood belong to the second half of the 4<sup>th</sup> century, most probably to the same time. From all this it follows that the youngest, safely dated specimens, were issued from 367–375, with a possible shift of dating to the end of the reign of Valens, to 378. The two illegible coins, including one lost specimen, allow for a potential correction of these dates, but it would certainly not be a significant chronological deviation. However, most of the coins show signs of long use and this should be taken into account when dating.

The largest hoard discovered at Pećine within graves is the aforementioned 88 bronze coins from the 4<sup>th</sup> century, ranging from Constantine I to Gratian. The oldest is a follis of the *Urbs Roma* type of Constantine I from the mint of Trier, dated to 332–333 (cat. 1809). All the other specimens are follis fractions. Next is a specimen from the Augustus issues of Constans, from the mint of Alexandria, dated to 347–348 (cat. 1810). Among the issues for Constantius (cat. 1811–1813), three mints appear: Siscia dated to 347–348, Cyzicus dated to 351–354 and Antioch dated to 347–348. Additionally, there are the Caesar issues of Julian II, dated to 355–361, from the mints of Siscia and Cyzicus (cat. 1814–1816). In one specimen of the *Spes reipublice* reverse type, due to the poorly preserved obverse depiction, it was not possible to determine whether it belongs to Constantius or Julian II (cat. 1817). Among the most numerous are issues of Valentinian I (26) and Valens (39), with only two reverse types: GLORIA ROMANORVM (emperor advancing right, dragging

367. g. (kat. 1874) i 8 novčića kod kojih nije bilo moguće odrediti kovnicu (kat. 1875-1882). Među izdanjima kovanim za Gracijana registrovana su dva primerka kovnice Siscija i Tesalonika, oba datovana od 367.-375. g. (kat. 1883-1884). Za 8 novčića nije bilo moguće odrediti da li pripadaju emisijama Valentinijana I ili Valensa (kat. 1885-1892). Samo kod jednog od njih određena je kovnica (Tesalonika), dok kod 7 ni to nije bilo moguće. Poslednji primerak (kat. 1893) potpuno je nečitljiv ali svakako pripada drugoj polovini 4. v. Po svemu sudeći najmlađi primerci se najverovatnije datuju u 375. g. mada sa izvesnom dozom rezerve jer nečitljiv i izgubljen primerak ostavljaju mogućnosti za korekcije. Tome u prilog ide i činjenica da je najveći deo ostave prikupljen između 364. i 375. g. Pojedini primerci u ostavi su odlično otkovani u novim kalupima (npr. kat. 1825 i 1847), dok neki predstavljaju primere kovanja u istrošenim kalupima (npr. kat. 1863). Pored toga, prema istrošenosti, novac je sigurno bio u cirkulaciji bar kraće vreme nakon kovanja.

Vratimo se razmatranju redosleda sahranjivanja u grobnici G – 3971. Kao što je već izneto, smatramo da je dečji grob E stariji od sahrane u sarkofagu A, pošto je najmlađi novac u prvom datovan od 355.-361. g., a u drugom od 367.-375. g. Za obe ostave pronađene u grobnici, s obzirom na njihovo datovanje 375.-378. (?) i 375. g. proizilazi da su povezane sa najmlađom sahranom u sarkofagu A. Naravno, ovi zaključci izvedeni su na osnovu preostalih numizmatičkih nalaza u grobnici, što moramo uzeti sa ozbiljnom dozom rezerve, jer je grobnica bila opljačkana i moramo računati sa velikim rasipanjem nalaza.

Ostava od 25 bronzanih frakcija folisa pronađena je u G – 5566. Radi se o grobu slobodno ukopanog pokojnika, koji je bio položen na levi bok, sa rukama ispod glave. Na desnoj podlaktici pronađena je narukvica od bronzane žice, ispod mandibule nalazila se perla od staklene paste, dok je 25 novčića, od kojih je većina bila slepljena, nađeno oko glave pokojnika.<sup>61</sup> Najstariji primerak u ostavi sa reversnim tipom *Spes rei-publice* pripada emisijama kovnice Siscija kovanim za Konstancija, datovan u 355.-361. g. (kat. 1963). Svi ostali primerci imaju samo dva reversna tipa: GLORIA ROMANORVM (car u vojničkom odelu stoji levo, drži glob i koplje) i SECVRITAS REIPVBLICAE (Viktorija hoda na

captive with right hand and holding *labarum* with left) and SECVRITAS REIPVBLICAE (Victory advancing left, holding wreath and palm branch). Of the issues minted for Valentinian I, the following were recorded: five specimens from the mint of Aquileia, dated to 367–375 (cat. 1818–1822); 17 specimens from the mint of Siscia, dated to 364/367–367/375 (cat. 1823–1839); one coin from the mint of Thessalonica, dated to 364–367 (cat. 1840) and three specimens in which it was not possible to determine the mint mark (cat. 1841–1843). Next are the numerous issues of Valens: three specimens from the mint of Aquileia, dated to 367–375 (cat. 1844–1846); 16 specimens from the mint of Siscia, dated to 364/367–367/375 (cat. 1847–1862); 8 coins issued at the mint of Thessalonica, dated to 364–367 (cat. 1863–1870); three specimens from the mint of Constantinople, dated to 364–375 (cat. 1871–1873); one specimen from the mint of Antioch, dated to 364–367 (cat. 1874) and 8 coins in which it was not possible to determine the mint (cat. 1875–1882). Among the issues struck for Gratian, two specimens from the mint of Siscia and Thessalonica were noted, both dated to 367–375 (cat. 1883, 1884). For 8 coins it was not possible to determine whether they belong to the issues of Valentinian I or Valens (cat. 1885–1892). The mint was identified only in one of them (Thessalonica), while with 7 not even that was possible. The last specimen (cat. 1893) is completely illegible but certainly belongs to the second half of the 4<sup>th</sup> century. In all probability, the youngest specimens are dated to 375, although with some reservations as the illegible and lost specimens leave the possibility for corrections. This is further supported by the fact that the largest part of the hoard was assembled between 364 and 375. Some of the specimens in the hoard are very well struck in new moulds (e.g. cat. 1825 and 1847), while some are examples of striking in worn moulds (e.g. cat. 1863). Also, judging by their wear, the coins were undoubtedly in circulation at least for a short time after having been struck.

There now follows a resumption of the discussion regarding the burial order in tomb G – 3971. As previously stated, it is believed that the child's grave E is older than the burial in sarcophagus A, as the youngest coin in the first is dated to 355–361, and in the second to 367–375. Both hoards found in the tomb, given their dating to 375–378 (?) and 375, appear to be connected with the youngest burial in sarcophagus

61 Za opis groba cf. dnevnik terenskih istraživanja: 3760, 3762.

levo, drži venac i palminu granu). Od toga izdanjima Valentinijana I pripadaju dva primerka kovnice Siscija, datovani od 367.-375. g. (kat. 1964-1965); jedan kovnice Tesalonika datovan od 364.-367. g. (kat. 1966) i jedan za koji nije bilo moguće utvrditi kovničku oznaku (kat. 1967). Slično je i sa primercima Valensa: dva pripadaju emisijama kovnice Siscija datovani 364.-375. g. (kat. 1968-1969); jedan kovnici Tesalonika datovan 364.-367. g. (kat. 1970) i jedan bez određene kovničke oznake (kat. 1971). Sigurno određen je samo još jedan primerk Gracijana kovnice Siscija, datovan od 367.-375. g. (kat. 1972). Za 15 preostalih frakcija folisa, zbog loše očuvanosti, nije bilo moguće utvrditi da li se radi o izdanjima Valentinijana I ili Valensa (kat. 1973-1987), ali se u svakom slučaju datuju u vreme od 364.-375. g. Hronološka razlika između najstarijeg Konstancijevog primerka (355.-361. g.) i svih ostalih (364.-375. g.) iznosi samo nekoliko godina tako da može biti zanemarena, jer je ostava mogla nastati iz novca koji je bio trenutno u opticaju. Međutim izvesna istrošenost, kao i nekoliko polomljenih novčića, ukazuju na izvestan period koji su proveli u cirkulaciji i sa tim treba računati pri datovanju.

Sledeći mini depo pronaden je u G – 4006 i sastoji se od 13 primeraka novca. U pitanju je grobnica sa dve sahrane:<sup>62</sup> u zidanom grobu od opeka i u sarkofagu. Nalazi se neposredno sa južne strane ulaza u ranije opisanu grobnicu G – 3971. Grobnica je nepravilnog četvorougaoznog oblika u osnovi, zidana opekama i bila je pokrivena drvenim krovom. Konstrukcija je u velikoj meri razrušena pljačkom u anticima i radom mehanizacije prilikom iskopavanja. Unutrašnjost je bila omalterisana krečnim malterom i fesco oslikana. Hronološki gledano najpre je izvršena sahrana u zidanom grobu od opeka, potom je postavljen sarkofag, ozidana je grobnica i postavljen pod od opeka. Na podu grobnice u šutu pronadeno je 13 rasutih bronzanih novčića (kat. 1894-1906). Takođe na nivou poda, sa severne strane sarkofaga (strane sa koje je probijen prilikom pljačke), pored drugih sitnih nalaza, pronadena su još dva bronzana novčića: Konstansa iz kovnice Tesalonika datovan od 348-350. g. i Konstancija kovnice Siscija datovan u isto vreme (kat. 1497 i 1529).

Ovaj mini depo sastoji se od najstarijeg bronzanog primerka Filipa II (kat. 1894) provincijal-

A. Of course, these conclusions were drawn on the basis of other numismatic finds in the tomb and, as such, include serious reservations, as the tomb was robbed and the considerable scattering of finds has to be taken into account.

A hoard of 25 bronze follis fractions was discovered in G – 5566. This is a grave of an individual interred without a coffin, who was laid on its left side, with the arms under the head. On the right forearm, a bronze wire bracelet was noted, under the mandible there was a glass paste bead, while 25 coins, most of which were fused together, were found around the head of the deceased.<sup>61</sup> The oldest specimen in the hoard, with a *Spes reipublice* reverse type, belongs to the issues of the mint of Siscia struck for Constantius, and is dated to 355–361 (cat. 1963). All the other specimens have only two reverse types: GLORIA ROMANORVM (emperor in military dress standing left, holding globe and spear) and SECVRTAS REIPVBLICAE (Victory advancing left, holding wreath and palm branch). Of these, the following belong to issues of Valentinian I: two coins from the mint of Siscia, dated to 367–375 (cat. 1964, 1965), one from the mint of Thessalonica, dated to 364–367 (cat. 1966) and one in which it was not possible to determine the mint mark (cat. 1967). The situation is similar with the specimens of Valens: two belong to the issues of the mint of Siscia, dated to 364–375 (cat. 1968, 1969), one to the mint of Thessalonica, dated to 364–367 (cat. 1970) and one with an undetermined mint mark (cat. 1971). Only one more specimen of Gratian was accurately determined, from the mint of Siscia, dated to 367–375 (cat. 1972). With the 15 remaining follis fractions, due to their poor state of preservation, it was not possible to determine whether they belong to the issues of Valentinian I or Valens (cat. 1973–1987), but they are, however, dated to 364–375. The chronological difference between the oldest specimen of Constantius (355–361) and all the others (364–375) is only a few years and can be disregarded, as the hoard could have been compiled from coins which were, at that time, in circulation. However, the relatively worn state, as well as the several fragmented coins indicate that they were in circulation over a period of time and this should be taken into account when dating.

The next mini-hoard was discovered in G – 4006 and consists of 13 coins. This is a tomb with

62 Za opis grobnice cf. dnevnik terenskih istraživanja: 2945.

61 For grave description, cf. fieldwork diary: 3760, 3762.

ne kovnice Viminacijum iz osme godine lokalne ere (246-247. g.). Nakon velikog vremenskog hijatusa sledi primerak Konstansa kovnice Kizik datovan od 337.-340. g. (kat. 1895). Sledе dve frakcije folisa Konstancija (kat. 1896-1897) kod kojih nije bilo moguće utvrditi kovničku oznaku, te su datovani prema reversnim predstavama od 355.-361. g. Još jedan primerak najverovatnije pripada emisijama Konstancija (kat. 1898) iz istog vremena. Izdanja Valentinijana I zastupljena su jednim novčićem (kat. 1899) kovnice Siscija, datovanim od 364.-367. g. Zabeležen je i jedan primerak Valensa iz kovnice Tesalonika datovan u isto vreme kao i prethodni (kat. 1900). Kod jednog oštećenog novčića nije bilo moguće utvrditi da li se radi o izdanjima Valentinijana I ili Valensa (kat. 1901). Sledi primerak Gracijana emitovan u kovnici Siscija i datovan od 367-375 (kat. 1902). Najmlađi sigurno datovan novčić ovog mini depoa pripada emisijama Teodosija I kod koga nije bilo moguće utvrditi kovničku oznaku iz tog razloga datovan je u period cele vladavine od 379.-395. g. (kat. 1903). Preostala tri primerka su u većoj meri oštećena i nisu mogla biti opredeljena u određenu vladavinu osim da se mogu pripisati drugoj polovini 4. v. (kat. 1904-1906). S obzirom da je grobnica bila opljačkana<sup>63</sup> ne možemo biti sigurni da li najstariji primerak Filipa II pripada ovom depou ili ne. Takođe, na osnovu uslova nalaza, možemo pretpostaviti da je nalaz rasut prilikom pljačke i da izvesni primerci sigurno nedostaju. Slične sumnje mogu se izneti i u pogledu dva novčića nađena pored sarkofaga. Kako su pronađeni neposredno ispod mesta na kome je sarkofag obijen, moguće je da su činili deo nekog većeg depoa koji se nalazio u samom sarkofagu. Ovo su, naravno, samo logične pretpostavke za koje ne možemo dobiti prave potvrde. Iz tog razloga numizmatički nalazi iz G – 4006 je ne mogu pružiti pouzdane podatke za datovanje grobnice.

U okviru grobnice označene kao G – 3904 pronađeno je 8 novčića i dodatnih tri u grobu A iste grobnice.<sup>64</sup> Radi se o grobnici pravougaone osnove zidane od opeka, sa poluoblíčastim svodom i podom od opeka, omalterisane kreč-

two burials:<sup>62</sup> in a grave built from bricks and in a sarcophagus. It is located in the immediate proximity of the southern side of the entrance to the previously described tomb G – 3971. The tomb is of an irregular quadrangular base, built from bricks, and was covered with a wooden roof. The construction was largely destroyed by a robbery in Antiquity and the earth-moving equipment during excavations. The interior was plastered with lime mortar and fresco painted. Chronologically, the burial in the brick grave took place first, afterwards the sarcophagus was placed, the tomb walls erected and the brick floor laid. On the floor of the tomb, in the rubble, 13 scattered bronze coins were discovered (cat. 1894–1906). Also at the floor level, on the northern side of the sarcophagus (the side from which it was broken into during the robbery), in addition to other small finds, two more bronze coins were discovered: of Constans from the mint of Thessalonica, dated to 348–350 and of Constantius from the mint of Siscia, dated to the same period (cat. 1497, 1529).

The oldest coin in this mini-hoard is a bronze specimen of Philip II (cat. 1894) from the provincial mint of Viminacium, from the eighth year of the local era (246–247). After a great gap, next is a specimen of Constans from the mint of Cyzicus, dated to 337–340 (cat. 1895). Then there are two follis fractions of Constantius (cat. 1896, 1897) for which it was not possible to determine the mint mark, so they are dated, based on the reverse depictions, to 355–361. One more specimen most likely belongs to the issues of Constantius (cat. 1898) from the same time. Issues of Valentinian I are represented by one coin (cat. 1899) from the mint of Siscia, dated to 364–367. One specimen of Valens from the mint of Thessalonica was also recorded and dated to the same period as the previous one (cat. 1900). In one damaged coin it was not possible to determine whether it belongs to the issues of Valentinian I or Valens (cat. 1901). In addition, there is a specimen of Gratian issued at the mint of Siscia and dated to 367–375 (cat. 1902). The youngest safely dated coin of this mini-hoard belongs to the issues of Theodosius I and, since the mint mark could not be determined, it is dated to the period of the entire reign from 379–395 (cat. 1903). The remaining three specimens are badly damaged and could not be attributed to a specific reign, but only to the second half of the 4<sup>th</sup> century (cat.

63 Novčići su nađeni u sloju štuta na podu grobnice, bez naglašene koncentracije. Za razliku od depoa iz G – 3971 koji su pronađeni zajedno i slepljeni jedni za druge sto upućuje da su se nalazili u vrećici koja se raspala.

-----  
 nim malterom preko koga je sloj fresko maltera. Grobnica je razrušena, a jedino je bio očuvan deo istočnog zida. Do grobnice je vodio koridor od stepeništa u dužini od 3,80 m. Na nivou poda grobnice, neposredno ispod stepeništa pronađeno je osam bronzanih novčića. U okviru grobnice, ispod nivoa poda izvršene su dve sahrane u dvojnoj zidanoj grobnoj konstrukciji ukrašenoj fresko malterom, takođe razrušenim i opljačkanim. U grobu A pronađene su fragmentovane kosti i tri bronzana novčića. Najstariji je folis Konstancija cezara koji je emitovan u kovnici Aleksandrija i datovan od 333.-335. g. (kat. 1554). Drugi pripada emisijama Gracijana kovnice Siscija, datovan između 378.-383. g. (kat. 1712). Dok za treći nije bilo moguće odrediti vladara, mada po svemu sudeći pripada drugoj polovini 4. v. (kat. 2869). U okviru groba B nisu pronađeni nikakvi nalazi.

Za razliku od većine prethodnih, ovaj mali depo odlikuje veća hronološka razruđenost, što je najverovatnije posledica rasipanja nalaza prilikom pljačke. Najstariji primerak je folis kovnice Siscija, iz vremena Konstantina I kovan za Konstantina II cezara iz 325. g. (kat. 2075). Sledi

1904–1906). Since the tomb was robbed,<sup>63</sup> it is uncertain whether the oldest specimen of Philip II belongs to this hoard or not. Also, based on the conditions in which it was discovered, it can be assumed that the find was scattered during the robbery and that certain specimens are definitely missing. Similar doubts can be expressed with regard to the two coins found next to the sarcophagus. As they were discovered directly below the place where the sarcophagus had been broken into, it is possible that they were part of a larger hoard located in the sarcophagus itself. These are, of course, only logical assumptions which cannot be properly verified. For this reason, the numismatic finds from G – 4006 cannot provide reliable information for dating the tomb.

Within the tomb marked as G – 3904, 8 coins were discovered and an additional three in grave A of the same tomb.<sup>64</sup> This is a tomb of a rectangular base built from bricks, with a barrel vault ceiling and a brick floor, plastered with lime mortar with a layer of fresco painted mortar on top. The tomb was destroyed, and only a part of the eastern wall was preserved. From the bottom of the staircase, a 3.80 m long corridor led to the tomb. At the floor level of the tomb, directly under the staircase, eight bronze coins were discovered. Within the tomb, below the level of the floor, two burials were carried out in a double masonry grave construction decorated with fresco mortar, also demolished and robbed. In grave A, fragmented bones and three bronze coins were discovered. The oldest is a follis of Constantius as Caesar, which was issued at the mint of Alexandria and dated to 333–335 (cat. 1554). The second belongs to the issues of Gratian from the mint of Siscia, dated to 378–383 (cat. 1712), while for the third, it was not possible to determine the ruler, although in all likelihood it belongs to the second half of the 4<sup>th</sup> century (cat. 2869). Within grave B, no finds were discovered.

Unlike most of the previous ones, this small hoard is characterised by a greater chronological diversity, which is probably the result of the scattering of the find during the robbery. The oldest specimen is a follis from the mint of Siscia, from

<sup>63</sup> The coins were discovered in the layer of rubble on the floor of the tomb, without any specific concentration. This differs from G – 3971, where the coins were found fused together, which suggests that they were located in a pouch that disintegrated.

<sup>64</sup> For tomb description, cf. fieldwork diary: 2855-2858.

folis Konstantina I iz iste kovnice, datovan od 335.-336. ili 337. g. (kat. 2074). Za dve frakcije folisa, reversnog tipa *gloria romanorum* (car hoda na desno, vuče zarobljenika i drži *labrum*) nije bilo moguće sa sigurnošću odrediti da li pripada emisijama Valentinijana I ili Valensa (kat. 2076-2077), pa su datovani od 364.-375/378. g. (?). Sledi jedan novčić Valentinijana II sa reversnom legendom SALVS REIPUBLICAE (Viktorija korača na levo, nosi trofej preko levog ramena i vuče zarobljenika) nije bilo moguće utvrditi kovničku oznaku (kat. 2078). Isto je i sa jednim novčićem Teodosija II sa reversnom predstavom krsta u vencu (kat. 2079). Poslednji primerak nije bilo moguće determinisati ni prema vladaru, međutim svakako pripada kraju 4. ili početku 5. v. (kat. 2080). Ne samo da ovaj mini depo, za razliku od većine do sada opisanih, odlikuje veća hronološka razlika između najstarijeg i najmlađeg primerka, već je to slučaj i kod tri novčića pronađenih u okviru groba A iste grobnice. Sve ovo upućuje na nekompletnost nalaza kao posledicu pljačkanja grobnice. Iz tih razloga, kao i u primeru prethodne grobnice, ovi numizmatički nalazi ne mogu biti relevantni za datovanje grobnice.

Devet bronzanih novčića pronađeno je u dečjem, od opeka zidanom grobu G – 224. Od osteološkog materijala očuvani su fragmenti lobanje i delovi butinih kostiju. Pored glave nađeno je 9 novčića koji su nažalost izgubljeni, ali na osnovu beležaka u terenskoj dokumentaciji možemo rekonstruisati sastav ovog mini depoa.<sup>65</sup> Najstariji primerci pripadaju Valentinijanu I i Valensu (3 kom.), slede izdanja Gracijana (1), Teodosija I (3), Arkadija (1), dok je jedan primerak označen znakom pitanja (neodređen) mada se može pretpostaviti da hronološki verovatno ne odstupa od ostalih. Najmlađi bi, prema tome, bio primerak Arkadija koji možemo datovati jedino u celu njegovu vladavinu od 383.-408. g.

Iz monumentalne, krstoobrazne grobnice G – 4816 potiče manji depo od 9 novčića. U grobnici je bilo sahranjeno 11 pokojnika u četiri konhe sa zidanim grobnim pregradama. Novac je pronađen na podu grobnice u štu. Nažalost svih 9 primeraka je izgubljeno, a prema podacima iz terenske dokumentacije saznajemo je da se radilo o 6 srebrnih i tri bronzana novčića.<sup>66</sup> Pored ovih 9 na podu grobnice pronađeno je još dva bronzana

the time of Constantine I, struck for Constantine II as Caesar, from 325 (cat. 2075). Next is a follis of Constantine I from the same mint, dated to 335–336 or 337 (cat. 2074). For two follis fractions of the *Gloria romanorum* reverse type (emperor advancing right, dragging captive and holding *labarum*) it was not possible to determine with any certainty whether they belong to the issues of Valentinian I or Valens (cat. 2076, 2077), so they are dated to 364–375/378 (?). Additionally, there is a coin of Valentinian II with a SALVS REIPUBLICAE reverse legend (Victory advancing left, holding trophy over left shoulder and dragging captive) in which it was not possible to determine the mint mark (cat. 2078). The same is true of a coin of Theodosius II with a reverse depiction of a cross in a wreath (cat. 2079). The final specimen could not even be determined according to the ruler, however, it definitely belongs to the end of the 4<sup>th</sup> or the beginning of the 5<sup>th</sup> century (cat. 2080). Not only is this mini-hoard, unlike most of those thus far described, characterised by a greater chronological difference between the oldest and the youngest specimen, but this is also the case with the three coins found within grave A of the same tomb. All this points to the incompleteness of the finds, which resulted from the tomb robbery. For these reasons, as in the case of the previous tomb, these numismatic finds cannot be considered relevant for dating the tomb.

Nine bronze coins were discovered in a child's brick-built grave G – 224. Of the osteological material, skull fragments and parts of thigh bones are preserved. Next to the head, 9 coins were found, which have unfortunately since been lost, however, based on notes in the fieldwork documentation, the composition of this mini-hoard can be reconstructed.<sup>65</sup> The oldest specimens belong to Valentinian I and Valens (3 coins), followed by the issues of Gratian (1), Theodosius I (3) and Arcadius (1), while one specimen is labelled with a question mark (undetermined), although it can be assumed that chronologically it probably does not deviate from the others. The youngest would, therefore, be the specimen of Arcadius, which can only be dated to his entire reign from 383–408.

A small hoard of 9 coins originates from the monumental cruciform tomb G – 4816. In the tomb, 11 individuals were buried in four conchs with grave partitions. The coins were discovered

65 Za opis groba cf. dnevnik terenskih istraživanja: 361.

66 Za opis grobnice cf. dnevnik terenskih istraživanja: 3253-3259.

65 For grave description, cf. fieldwork diary: 361.

novčića od kojih jedan pripada emisijama Valentinijana II kovnice Kizik datovan od 378.-383. g. (kat. 1718). Drugi primerak nije bilo moguće pripisati nekoj određenoj vladavini, ali pripada vremenu kraja 4. ili početku 5. v. (kat. 2898).

Sledeći depo koji je činilo 12 bronzanih frakcija folisa pronađen je u G – 4736. U pitanju je grob sa konstrukcijom od opeka, čiji pokrivač je uništen pljačkom u antici. Unutrašnjost grobne konstrukcije bila je fresko oslikana. Ostaci skeleta nisu nađeni, a u zapadnom delu groba pronađeno je 12 novčića.<sup>67</sup> Preostali deo depoa čini 9 novčića koji su većinom loše očuvani, polomljeni ili ih čine samo fragmenti novčića. Najstariji primerak pripada najverovatnije emisijama Konstancija (kat. 2081) kovnice Nikomedija. S obzirom na reversni motiv *gloria exercitus* sa jednim standardom, može se datovati do 335.-340. g. Sledeći fragment novčića pripada kovanju Valentinijana I, neodređene kovnice (kat. 2082). Ostalih sedam primerka (kat. 2083-2089) nije bilo moguće opredeliti u određenu vladavinu, pet verovatno pripada vremenu druge polovine 4. v. dok poslednja dva mogu zalaziti i u 5. v. Kako je grobnica opljačkana ne možemo biti sasvim sigurni u celovitost ovog depoa ni u datovanje grobnice. Ali kako su sačuvani primerci u velikoj meri istrošeni ili polomljeni može se pretpostaviti da su bili duže vremena u upotrebi, što bi ovu grobnicu moglo opredeliti u 5. v.

Sledeća ostava ne pripada grobnoj celini ali je pronađena u okviru nekropole, te smatramo da je treba uključiti u razmatranja o pogrebnim ritualima. Pronađena je na 30 m zapadno od iskopa za dimnjak TE Drmno i sastoji se od 43 cela novčića i 6 fragmentovanih. Najstariji folis pripada cesarskim emisijama Konstantina II (kat. 3090) neodređene kovnice, datovan od 330.-333. g. prema reversnoj predstavi. Sledeći folis nije bilo moguće pripisati Konstantinu II ili Konstanciju (kat. 2091) ali pripada jednom od njih. Slede dve frakcije folisa Valentinijana I, neodređenih kovnica (kat. 2092-2093). Jedan primerak pripada kovanjima Valentinijana II, kovnice Herakleja, datovan od 378.-383. g. (kat. 2094). Dva novčića u ostavi spadaju u izdanja Teodosija I (kat. 2095-2096). Prvi od njih iskovan je u kovnici Kizik i datovan od 388.-392. g. dok kod drugog nije bilo moguće utvrditi kovničku oznaku. Isto je i

on the floor of the tomb in the rubble. Unfortunately, all 9 specimens have since been lost, but the data from the fieldwork documentation reveals that these were 6 silver and three bronze coins.<sup>66</sup> In addition to these 9, on the floor of the tomb, two more bronze coins were discovered, one of which belongs to the issues of Valentinian II from the mint of Cyzicus, dated to 378–383 (cat. 1718). The other specimen could not be attributed to any particular reign, but belongs to the end of the 4<sup>th</sup> or the beginning of the 5<sup>th</sup> century (cat. 2898).

The next hoard, which comprises 12 bronze follis fractions, was discovered in G – 4736. This is a grave with a brick construction, the cover of which was destroyed by a robbery in Antiquity. The interior of the grave construction was fresco painted. The remains of the skeleton were not found, and in the western part of the grave, 12 coins were discovered.<sup>67</sup> The available remainder of the hoard comprises 9 coins that are mostly poorly preserved, broken or represented only by fragments. The oldest specimen probably belongs to the issues of Constantius (cat. 2081), from the mint of Nicomedia. Considering the reverse motif *Gloria exercitus* with one standard, it can be dated to 335–340. The next coin fragment belongs to coinage of Valentinian I, from an undetermined mint (cat. 2082). The other seven specimens (cat. 2083–2089) could not be attributed to a specific reign; five probably belong to the second half of the 4<sup>th</sup> century, while the last two may even extend into the 5<sup>th</sup> century. As the tomb was robbed, there can be no absolute certainty about the completeness of this hoard or the dating of the tomb. However, as the preserved specimens are largely worn or broken, it can be assumed that they were in circulation over a longer period of time, which could place this tomb into the 5<sup>th</sup> century.

The following hoard does not belong to a grave, but was discovered within the necropolis and should, therefore, be included in the consideration regarding funerary rituals. It was discovered 30 m west of the excavation for the chimney of the TPP Drmno and consists of 43 whole and 6 fragmented coins. The oldest follis belongs to the Caesar issues of Constantine II (cat. 3090), from an undetermined mint, dated to 330–333, based on the reverse depiction. The next follis could not be attributed to Constantine II or Constantius

67 Tri novčića su izgubljena, te je za obradu bilo dostupno 9 primerka. Za opis groba cf. dnevnik terenskih istraživanja: 3221.

66 For tomb description, cf. fieldwork diary: 3253-3259.

67 Three coins were lost, so 9 specimens were available for processing. For grave description, cf. fieldwork diary: 3221.

sa dva novčića Arkadija (kat. 2097-2098) koji su iz tog razloga datovani u celu njegovu vladavinu od 383.-408. g. U ostavi je zabeležen i jedan primerak Honorija, neodređene kovnice (kat. 2099). Sledi šest novčića koji pripadaju emisijama Teodosija II (kat. 2100-2105). Prvi od njih pripada kovnici Kizik i datovan je od 408.-423. g. dok kod ostalih pet nije bilo moguće utvrditi kovničku oznaku. Za jedan primerak ostaje nejasno da li pripada Teodosiju I ili II zbog loše očuvane aversne predstave (kat. 2106). Preostalih 26 primeraka, kao i 6 fragmenata novčića, bilo je nemoguće pripisati određenoj vladavini, ali u svakom slučaju pripadaju vremenu poslednjih sigurno određenih (kraj 4. i početak 5. v.).

Radi lakše preglednosti izneti podaci o ostavama prikazani su u Tabeli 9, gde je u koloni »broj novčića u ostavi« iskazan ukupan broj pronađenih novčića prema terenskoj dokumentaciji, koji se u pojedinim primerima razlikuje od sadašnjeg stanja.

(cat. 2091), but it belongs to one of them. Next are two follis fractions of Valentinian I, from undetermined mints (cat. 2092, 2093). Another specimen belongs to coinage of Valentinian II, from the mint of Heraclea, dated to 378–383 (cat. 2094). Two coins in the hoard belong to issues of Theodosius I (cat. 2095, 2096). The first of them was struck at the mint of Cyzicus and dated to 388–392, while for the other it was not possible to determine the mint mark. The same is true for two coins of Arcadius (cat. 2097, 2098), which are for this reason dated to his entire reign from 383–408. In the hoard, a specimen of Honorius from an unidentified mint was also recorded (cat. 2099). Next are six coins that belong to issues of Theodosius II (cat. 2100–2105). The first of them is from the mint of Cyzicus and is dated to 408–423, while for the other five it was not possible to determine the mint mark. For one specimen, due to its poorly preserved obverse depiction, it remains unclear whether it belongs to Theodosius I or II (cat. 2106). The remaining 26 specimens, including the 6 coin fragments, could not be attributed to a specific reign, but it is likely they belong to the time of those last reliably determined (the end of 4<sup>th</sup> and beginning of the 5<sup>th</sup> century).

For clarity, the presented data regarding the hoards is shown in Table 9, where the column “number of coins in the hoard” indicates the total number of discovered coins according to the fieldwork documentation, which, in some cases, differs from the current state.

grob br./ grave no (G)	broj novčića u ostavi/number of coins in the hoard	položaj novčića u grobu/ position of coins in grave	raspon novčića u ostavama/ range of the coins in the hoards
863	11	?	Marcus Aurelius (161-180.) Gordianus III (238-244.)
1071	10	A	Elagabalus (218-222) Philip I (246)
5089	49 + 4	F (49) + D (4)	49 – Gallienus (255-256.) – Quintillus (270.) 4 – lost <sup>68</sup>
1176	13	G	Constantine I (330/333. – 333/335.)
2800	23	G	Constans (348-350.) Constantius II (348-351.)

68 U terenskoj dokumentaciji ne postoji opredeljenje za četiri izgubljena primerka; cf. supra ref. 45.

68 In the fieldwork documentation, nothing was determined for the four lost specimens; cf. supra ref. 45.

Tabela 9 – Lista ostava u grobovima sa inhumacijom.  
Table 9 – List of the hoards in the inhumation graves.

Jasno proizilazi da najveći broj ostava (osim prve tri) formiran tokom 4. v. i pohranjen u drugoj polovini istog veka. Samo tri svojim najmlađim primercima zalaze u početak 5. v. Ovde bi spadala i ostava od 49 primeraka pronađena u slojevima na nekropoli. Od svih navedenih pojedinačnih grobova ili grobnica sa više sahrana koje su sadržavale manje ili veće ostave,

69 U ovom slučaju u terenskoj dokumentaciji naveden je sastav depoa prema vladarima.

70 Iz terenske dokumentacije saznajemo jedino da su u pitanju 6 srebrnih i 3 bronzana novčića, bez ikakvih biližih odrednica.

It is clear that most of the hoards (except the first three) were assembled during the 4<sup>th</sup> century and deposited in the second half of the same century. Only three, with their youngest specimens, extend into the beginning of the 5<sup>th</sup> century. This would include the hoard of 49 coins discovered in layers at the necropolis. Of all the aforementioned individual graves or tombs with a number

69 In this case, the fieldwork documentation notes the composition of the hoard according to rulers.

70 The fieldwork documentation states only that these are 6 silver and 3 bronze coins, without any more detailed determinations.

u jednoj grobnici (G – 3971) pronađene su dve ostave, dok su u još četiri (G – 5089, G – 4006, G – 3904, G – 4816) pored ostava pronađeni dodatni monetarni nalazi (u menjem broju od 2-4). U većim zidanim grobnicama, sa više sahranjenih pokojnika, novac je pronalazan uglavnom u šutu, na podu grobnice i nije povezan sa nekom od sahrana. Izuzetak predstavljaju novčići otkriveni u Grobovima A i E iz grobnice G – 3971, koji su pronađeni u prvom slučaju u opljačkanoj sarkofagu, a u drugom na grudima slobodno ukopanog pokojnika dečjeg uzrasta. Najveći problem u izvođenju zaključaka o ulozi ostava novca u grobnicama, predstavlja činjenica da su u pitanju u antici opljačkane grobnice kod kojih se susrećemo sa situacijom u kojoj raspoložemo samo preostalim nalazima, onima koji su ostali neopaženi pljačkašima ili su ih sami izgubili prilikom pljačke. Kod dve ostave iz G – 3971 možemo skoro sa sigurnošću reći da ih pljačkaši nisu opazili, upravo zbog toga što su se nalazile van samih sarkofaga na koje je verovatno bila usmerena njihova pažnja. Ukoliko bi ova pretpostavka bila osnovana, to bi značilo da su u pogrebnim ritualima na Viminacijumu u drugoj polovini 4. v. ovakvi veći depoziti prilagani ne samo u grobove već i u okviru monumentalnih grobnica sa više sahrana. Za čije »troškove« na drugom svetu su bili namenjeni ovi depoi sa više sahrana u okviru grobnica, za sada nam ostaje nepoznanica, zbog pomenutih uslova nalaza. Da li su povezane sa najmlađom sahranom i poslednjim otvaranjem grobnice? Kao što je verovatno slučaj u grobu 3971 gde su obe pronađene ostave datovane u isto vreme. Očekujemo da ćemo tokom aktuelnih arheoloških istraživanja na istom prostoru otkriti neopljačkane grobnice koje će nam pružiti više mogućnosti za zaključivanje o ulozi ostava novca u drugoj polovini 4. v. u pogrebnim ritualima na Viminacijumu.

Kada su u pitanju grobovi kremiranih pokojnika (G1) samo jedan sadržavao je veći broj pronađenih novčića (Tabela 5). Radi se o grobu bunaru G1 – 1089, kod koga su usled mogućnosti obrušavanja radovi obustavljeni na 6 m dubine. Devet primeraka novca nije nađeno zajedno, već predstavljaju pojedinačne primerke nalažene od površine uočenog ukopa do dubine od 3,60 m. Kako se do ostataka pokojnika nije došlo zbog životne ugroženosti istraživača, ostaje nepoznato na kojoj je dubini postavljena urna i prilozi koji su položeni u grob prilikom sahrane. Svi ostali nalazi otkriveni na različitim dubinama, čine deo

of burials that contained smaller or larger hoards, in one tomb (G – 3971), two hoards were found, while in four (G – 5089, G – 4006, G – 3904, G – 4816), besides the hoards, additional numismatic finds were discovered (in small numbers, from 2–4). In large masonry tombs, with more burials, coins were mainly found in the rubble on the floor of the tomb and do not relate to any of the burials. The exception are the coins discovered in graves A and E from tomb G – 3971, which were, in the first case, found in the looted sarcophagus, and in the second, on the chest of the child interred without a coffin. The biggest problem when drawing conclusions with regard to the role of coin hoards in tombs is the fact that the tombs in question were looted in Antiquity and the only finds available are those that remained unnoticed or lost by the robbers themselves. In the case of the two hoards from G – 3971, it is almost certain that the robbers did not notice them, precisely because they were located outside the sarcophagi, towards which their attention was probably directed. If this assumption were true, it would mean that in funerary rituals at Viminacium, in the second half of the 4<sup>th</sup> century, such large hoards were deposited not only in graves but also within monumental tombs with more burials. For now, it remains unknown for whose “expenses” in the other world these hoards in tombs with more burials were intended because of the aforementioned conditions of finding. The question of whether they are associated with the youngest burial and the last opening of the tomb remains, as is probably the case with G – 3971, where both discovered hoards are dated to the same period. It is expected that in the course of current archaeological investigations in the same area, undisturbed tombs will be discovered, which will provide more possibilities for drawing conclusions with regard to the role of coin hoards in funerary rituals at Viminacium in the second half of the 4<sup>th</sup> century.

In terms of cremation burials (G1), only one contained a larger number of discovered coins (Table 5). This is the well-grave G1 – 1089, in which, due to the danger of its collapse, works were suspended at a 6 m depth. Nine coins were not found together, but are individual specimens discovered in the section from the surface of the noted pit to a depth of 3.60 m. As the remains of the deceased were not retrieved due to the life-threatening risks to researchers, it remains unknown at what depth the urn was deposited and

slojeva koji je nastao prilikom kasnijih daća. Ovim slojevima pripadaju i svi pronađeni primerci novca,<sup>71</sup> prema dubini nalaza raspoređeni na sledeći način: C- 12021 (kat. 590 – Dp/As Hadrijana) sa površine ukopa groba; C – 12003 (izgubljen – nečitak bronzani novac) sa dubine 0,20 m; C – 12005 (izgubljen – nečitak bronzani novac) sa 0,40 m; C – 12019 (kat. 1172 – denar suberat Elagabala) sa dubine 0,50 m; C – 12020 (izgubljen – nečitak bronzani novac) sa dubine 1,10 m; C - 12006 (izgubljen – nečitak bronzani novac) sda dubine 1,30 m; C – 12013 (kat. 3156 – bronzani novac kovnice Stobi Julije Domne) sa dubine 1,90 m; C – 12011 (izgubljen – bronzani novc Julije Mameje) sa dubine 3,60 m; C – 12012 (kat. 3455 – fragment bronzanog novca 1.-3. v.) izdvojen prilikom obrade keramike.<sup>72</sup>

## PERFORIRANI NOVČIĆI PRONAĐENI U GROBOVIMA I SLOJEVIMA NA NEKROPOLI

Određeni broj novčića pronađenih na nekropoli Pećine (grobovi i slojevi) bio je perforiran, jednom, dva, tri ili četiri puta. Ukupno ih je registrovano 45, od toga je 17 pronađeno u grobovima inhumiranih pokojnika (G), 6 u grobovima kremiranih pokojnika (G1) i 22 u slojevima na nekropoli (Grafikon 7). Kao što je već opaženo na nekropoli Više Grobalja i na Pećinama je znatno veća pristunost perforiranih novčića u grobovima inhumiranih u odnosu na kremirane pokojnike. Kod poslednjih su to istovremeno i jedini numizmatički nalazi u grobovima, za razliku od inhumacija kod kojih se u pojedinim slučajevima pojavljuje više perforiranih novčića ili češće i neperforirani. Ovo se takođe poklapa sa analizama dobijenim na nekropoli Više Grobalja. Smatramo da treba skrenuti pažnju da je na nekropoli Više Grobalja, pored manjeg ukupnog uzorka ispitanog novca, pronađeno više perforiranih novčića nego na nekropoli Pećine (47 prema 45). Osim toga, na nekropoli Više Grobalja je zabeleženo veće procentualno prisustvo ove

71 Od prvobitnih devet primeraka, pet je izgubljeno, što je evidentirano prilikom popisa celokupnog numizmatičkog materiala u Narodnom muzeju u Požarevcu 2005. godine, cf. *supra* ref. 5.

72 Za opredeljenje izgubljenih primeraka cf. Golubović 2008: 36-37.

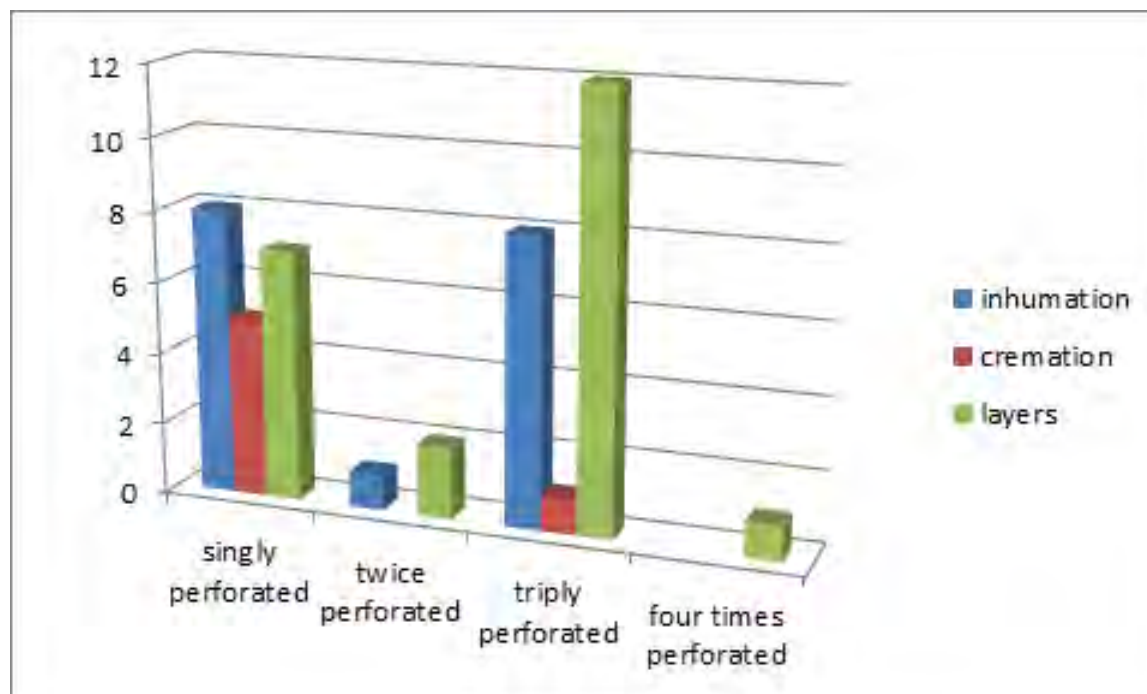

what items were included in the grave inventory during the funeral. All other finds discovered at different depths are part of the layers formed during subsequent commemorative repasts. All of the discovered coins come from these layers,<sup>71</sup> and, based on the depth of finding, are arranged as follows: C – 12021 (cat. 590 – Dp/As of Hadrian) from the surface of the grave pit; C – 12003 (lost – illegible bronze coin) from a depth of 0.20 m; C – 12005 (lost – illegible bronze coin) from a depth of 0.40 m; C – 12019 (cat. 1172 – denarius subaeratus of Elagabalus) from a depth of 0.50 m; C – 12020 (lost – illegible bronze coin) from a depth of 1.10 m; C – 12006 (lost – illegible bronze coin) from a depth of 1.30 m; C – 12013 (cat. 3156 – bronze coin of Julia Domna from the mint of Stobi) from a depth of 1.90 m; C – 12011 (lost – bronze coin of Julia Mamaea) from a depth of 3.60 m; C – 12012 (cat. 3455 – bronze coin fragment from 1<sup>st</sup>–3<sup>rd</sup> century) retrieved during the processing of ceramics.<sup>72</sup>

## PERFORATED COINS DISCOVERED IN GRAVES AND LAYERS AT THE NECROPOLIS

A certain number of coins discovered at the necropolis of Pećine (graves and layers) are perforated either once, twice, three or four times. Of a total of 45 recorded, 17 were discovered in inhumation burials (G), 6 in cremation burials (G1) and 22 in layers at the necropolis (Graph 7). As already observed at the necropolis of Više Grobalja, at the site of Pećine there is also a significantly greater incidence of perforated coins in inhumation burials compared to cremations. In the latter, they are also the sole numismatic finds in the graves, unlike in inhumations, which can contain a number of perforated coins and, more often, unperforated as well. This corresponds to the analyses carried out at the necropolis of Više Grobalja. It is important to draw attention to the fact that at the necropolis of Više Grobalja, even with a smaller total sample of examined specimens, more perforated coins were discovered

71 Of the original nine specimens, five were lost, which was recorded during the inventorying of the entire numismatic material at the National Museum in Požarevac in 2005.

72 For the determination of the lost specimens, cf. Golubović 2008: 36-37.

Grafikon 7 – Zastupljenost perforiranih novčića na nekropoli (u grobovima i slojevima).  
Graph 7 – Perforated coins on necropolis (from graves and from layers).

vrste novca u grobovima (23 u G i 9 u G1 ili 48,92% i 19,14%) nego na Pećinama (17 u G i 6 u G1 ili 37,77% i 13,33%) u odnosu na nalaze iz slojeva (Više Grobalja 15 kom. ili 31,92% i Pećine 22 kom. ili 48,90%).<sup>73</sup>

U primeru grobova sa inhumiranim pokojnicima u kojima su pronađeni perforirani novčići, razlikujemo dečje i grobove odraslih individua (Tabele 10-11). Registrovana su tri groba odraslih individua sa jednom perforiranim novčićem (G – 1749, G – 4923 i G – 5119) i tri groba sa tri puta perforiranim novčićima (G – 1827, G – 4197 i G 4975). Pored toga u jednom od grobova pronađeni su jednom i tri puta perforirani novčići (G – 877). Među dečjim grobovima jednom perforirani novčić pojavljuje se u četiri groba (G – 1807, G – 2947, G – 3562 i G – 4160). U istom broju grobova pronađeni su tri puta perforirani novčići (G – 227, G – 342, G – 2669 i G – 3541). Zapaža se da je broj grobova odraslih individua sa perforiranim novčićima kao prilogom gotovo identičan na Više Grobalja i Pećinama (6 – 7 grobova), sa razlikom u odnosima zastupljenosti jednom ili tri puta perforiranih novčića. Među-

than at the necropolis of Pećine (47 to 45). Furthermore, at the necropolis of Više Grobalja, the percentage of incidence of these types of coins in graves is larger (23 in G and 9 in G1 or 48.92% and 19.14%) than at Pećine (17 in G and 6 in G1 or 37.77% and 13.33%) compared to the finds from layers (Više Grobalja 15 coins or 31.92% and Pećine 22 coins or 48.90%).<sup>73</sup>

In inhumation burials where perforated coins were discovered, the graves of children and adults are distinguished (Tables 10–11). Three graves of adult individuals were noted with a singly perforated coin (G – 1749, G – 4923 and G – 5119) and three graves with triply perforated coins (G – 1827, G – 4197 and G 4975). In addition, in one of the graves, both singly and triply perforated coins were discovered (G – 877). In children's graves, a singly perforated coin appears in four cases (G – 1807, G – 2947, G – 3562 and G – 4160). The same number of graves contained triply perforated coins (G – 227, G – 342, G – 2669 and G – 3541). It is observed that the number of adult graves with perforated coins in their inventory is practically identical at Više Grobalja and Pećine

<sup>73</sup> Vojvoda, Mrđić 2015: 30, 32, 33, Tabele 7-8; Vojvoda 2015: 55.

<sup>73</sup> Vojvoda, Mrđić 2015: 30, 32, 33, Tables 7 and 8; Vojvoda 2015: 55.

tim, na nekropoli Više Grobalja su u nešto većem broju prisutni nalazi perforiranih novčića u dečjim grobovima nego na Pećinama (13 prema 9). Osim toga na Pećinama nije zabeležen ni jedan dečji grob koji bi imao kao prilog dva perforirana novčića, dok ih je na Više Grobalja bilo dva.<sup>74</sup>

Položaj perforiranih novčića u grobovima odraslih individua vezan je najčešće za predeo glave i torzoa (položaji A i D). U primeru dečjih grobova ponavlja se pozicija D, dok su sve ostale pojedinačne i različite. Posmatrajući sve ostale priloge u navedenim grobovima inhumiranih pokojnika sa perforiranim novčićima, pokušali smo da odredimo da li ima elemenata za tvrdnje da su činili delove kompozitnih ogrlica/narukvica, da li su predstavljali samostalni privezak ili njihova funkcija u datom primeru ostaje nejasna. Nalaz perforiranog novčića iz G – 1749 predstavlja deo tzv. »monetarnog nakita«, odnosno čini privezak na bronzanoj minduši. U istom grobu pronađen je još jedan neperforiran novčić ispod desne ključne kosti pokojnika.<sup>75</sup> U primeru dva preostala groba odraslih individua sa jednim perforiranim novcem (G – 4923 i G – 5119) novčići su pronađeni pored lobanje pokojnika (pozicija A). Kod prvog groba perforirani novčić je pronađen samostalno, dok je kod drugog otkriven zajedno sa jednom perlom od staklene paste. Mesto nalaza moglo bi u oba slučaja upućivati na funkciju novčića kao priveska na vrvici oko vrata koja se raspala. Mada je ovakva tvrdnja sigurnija u primerima gde su novčići nadjeni na grudima pokojnika (položaj D). Pored toga, moguće je da su novčići i perla u konkretnim grobovima bili prišiveni na neku vrstu tekstilnog pokrivala za glavu, što bi značilo da su u pitanju pokojnici ženskog pola. U nedostatku antropoloških analiza ovo naravno ostaje u sferama pretpostavki. U jednom od grobova odraslih individua (G – 1827) tri puta perforirani novčić pronađen je na levoj očnoj duplji pokojnika. Ovo je ujedno jedini numizmatički nalaz u grobu, koji nam svojim mestom nalaza ne ostavlja mnogo mogućnosti za pretpostavke o njegovoj funkciji. Tri puta perforirani novčić iz G – 4197 pronađen je na gornjoj niveleti kovčega načinjenog od opeka, dok je drugi neperforirani novčić pronađen u kovče-

(6 – 7 graves), with a difference in the ratios of incidence of singly or triply perforated coins. However, at the necropolis of Više Grobalja, the number of finds of perforated coins in children's graves is somewhat larger than at Pećine (13 to 9). Furthermore, there were no children's graves at Pećine with two perforated coins in the inventory, whereas two were noted at Više Grobalja.<sup>74</sup>

The position of perforated coins in graves of adults is mainly in the region of the head and torso (positions A and D). In children's graves, position D repeats, while all the others occur only once and are different. By observing all other grave goods in the aforementioned inhumation burials with perforated coins, an attempt was made to determine whether there are elements to support the assertions that they constituted parts of composite necklaces/bracelets, whether they represented a standalone pendant or their function in a given case remains unclear. The perforated coin from G – 1749 represents part of the so-called "monetary jewellery", specifically a pendant on a bronze earring. In the same grave, another, unperforated coin was discovered under the right collarbone of the deceased.<sup>75</sup> In the two remaining graves of adults with one perforated coin (G – 4923 and G – 5119), the coins were located next to the skull (position A). In the first grave, the perforated coin was discovered on its own, while in the second, it was found together with a glass paste bead. The location of the find could, in both cases, indicate the function of the coin as a pendant on a string around the neck that fell apart. However, such an assertion is safer in cases where coins were found on the chest of the deceased (position D). Furthermore, it is possible that the coins and the bead in these particular graves were sewn onto some kind of a textile covering for the head, which would mean that these are female individuals. In the absence of anthropological analyses, this of course remains merely an assumption. In one of the graves of adult individuals (G – 1827), a triply perforated coin was discovered on the left eye socket. This is, at the same time, the only numismatic find in the grave, which, with its position, does not leave much scope for assumptions regarding

<sup>74</sup> Cf. *supra* ref. 73.

<sup>75</sup> Prilikom istraživanja svi novčići koji su očito činili delove tzv. »monetarnog nakita« nisu bili pripojeni numizmatičkoj zbirci; cf. Vojvoda, Mrđić 2015: 34, ref. 47.

<sup>74</sup> Cf. *supra* ref. 73.

<sup>75</sup> During the research, all the coins that had obviously formed parts of the so-called "monetary jewellery" were not included in the numismatic collection; cf. Vojvoda, Mrđić 2015: 34, ref. 47.

Tabela 11 – Perforirani novci u dečjim inhumiranim grobovima.

Table 11 – Perforated coins in children's inhumation burials.

gu.76 U G – 4975 takođe su pronađena dva novčića, od kojih je perforirani nađen sa leve strane karlice (F), a neperforirani na grudima pokojnika. Situacija u tri opisana groba ne ukazuje da su perforirani novčići korišćeni kao nakit. Kod jedinog groba odrasle individue gde su nađeni jednom i tri puta perforirani novčići (G – 877) možemo sa rezervom pretpostaviti da su služili kao privesci, pošto su pronađeni pored levog i desnog ramena.<sup>77</sup>

Na nekropoli Više Grobalja je već konstatovano da su u dečjim grobovima perforirani novčići češće činili delove kompozitnih ogrlica ili narukvica, zajedno sa različitim apotropejskim privescima. Ovo je slučaj i sa G – 1807 na Pećinama, gde su na jednom mestu, pored leve noge, pronađeni brojni predmeti za koje se pretpostavlja da su bili pohranjeni u drvenu kasetu.<sup>78</sup> Inventar je činilo: jednom perforirani novac, školjka, bronzana bula, gvozdeni prsten sa kružnom glavom, bronzano zvonce, perforirani veći zub divlje svinje, obrađen parožak, minduša od srebrne žice sa loptastom perlom, bronzana šivača igla koja je savijena tako da izgleda kao privezak, privezak načinjen od govrdjeg zuba, tri koštana priveska u formi falusa, četiri perle od staklene paste, dva priveska od bronzane žice i

its function. The triply perforated coin from G – 4197 was discovered on top of the coffin made of bricks, while the other, unperforated coin was in the coffin.<sup>76</sup> In G – 4975, there were also two coins, a perforated on the left side of the pelvis (F) and an unperforated on the chest of the deceased. There are no indications that the perforated coins from the three described graves were used as jewellery. In the only grave of an adult individual where both singly and triply perforated coins were discovered (G – 877), it can be assumed, with certain reservations, that they were used as pendants, as they were located next to the left and right shoulder.<sup>77</sup>

At the necropolis of Više Grobalja, it has already been noted that perforated coins in children's graves often constituted parts of composite necklaces or bracelets, together with various apotropaic pendants. This is also the case with G – 1807 at Pećine, where, in one place, next to the left leg, numerous items were discovered, which are believed to have been deposited in a wooden box.<sup>78</sup> The inventory comprised: a singly perforated coin, a shell, a bronze bulla, an iron ring with a circular head, a small bronze bell, a large perforated tooth of a wild boar, a treated tine of an

76 Iz opisa groba u dnevniku terenskih radova nejasno je da li je perforirani novčić pronađen na samom pokrivaču od horizontalnih opeka ili nakon podizanja ovih opeka. Ni za drugi neperforirani novčić ne postoje podaci o mestu nalaza u odnosu na skelet, koji je u većoj meri nesačuvan; cf. dnevnik terenskih istraživanja: 2974.

77 Ovo su ujedno i jedini prilozi u grobu.

78 Na grumenu zemlje je pronađen otisak drveta.

76 From the description of the grave in the fieldwork diary, it is unclear whether the perforated coin was discovered on the actual cover of horizontal bricks or after these bricks had been lifted. Also, for the other, unperforated coin there is no data regarding the location of finding in relation to the skeleton, which is largely unpreserved; cf. fieldwork diary: 2974.

77 These are the only grave goods in the grave.

78 An impression of wood was discovered on a clod of earth.

jedan privezak od karneola u vidu falusa.<sup>79</sup> Nabražani predmeti činili su deo jedne ili više niski apotropijske namene. U dečjem grobu (G – 2947) pronađena su tri novčića od kojih je perforirani bio ispod lobanje pokojnika, te je mogao biti u funkciji privjeska. Od ostala dva, jedan je nađen u ustima, a drugi pored lobanje. U primeru G – 3562 perforirani novac je najverovatnije predstavljao deo niske jer je pronađen na istom mestu sa: bronzanom alkom, deformisanom bronzanom šivaćom iglom, morskom školjkom, kamenim žetonom, dve bronzane kružne ploče sa nitnama i deformisanim bronzanim limom. Prva dva od navedenih predmeta mogli su zajedno sa perforiranim novčićem činiti deo niske.<sup>80</sup> Jedini prilog u G – 4160 predstavlja perforirani novčić pronađen na grudima pokojnika, koji je mogao biti u funkciji samostalnog privjeska oko vrata. Činjenica da je pronađen sa ostacima tkanine ne mora značiti da je bio prišiven na odeću, pogotovo što je u pitanju antoninijan sa jednom perforacijom načinjenom na 12 sati ose aversa.<sup>81</sup> Dva puta probušeni novčići su retka pojava na viminacijumskim nekropolama.<sup>82</sup> Registrovano ih je do sada ukupno tri, od toga je jedan pronađen u G – 4288, a predstavljao je deo ogrlice pronađene oko vrata pokojnika. Pored dva puta perforiranog novčića, nisku su činili: bronzana bula, privezak od ćilibara, keramike, kosti i puža, više perli od staklene paste. U primeru G – 227 je kao jedini prilog pronađen tri puta perforirani novčić pored karlice, tako da ne možemo reći da je imao funkciju nakita. U G – 342 usled loše očuvanosti osteoloških ostataka nije bilo moguće odrediti položaj priloga u odnosu na skelet pokojnika. Zajedno su pronađeni tri puta perforirani novčić i perla od staklene paste, koji bi mogli činiti deo niske sa dva privjeska. Na drugom mestu u okviru rake pronađen je privezak modelovan od trbuha keramičke posude u sekundarnoj upotrebi sa tri perforacije i kraj njega zlatna minduša tipa karličice. Na osnovu situacije u G – 2669 možemo

antler, a silver wire earring with a round bead, a bronze sewing needle bent into a pendant shape, a pendant made of a bovine tooth, three phallic-shaped pendants made of bone, four glass paste beads, two bronze wire pendants and a phallic-shaped carnelian pendant.<sup>79</sup> The listed items constituted part of one or more strings with an apotropaic function. In a child's grave (G – 2947), three coins were discovered, of which the perforated was under the skull of the deceased and could have, therefore, functioned as a pendant. Of the other two, one was found in the mouth, and the other, next to the skull. In the case of G – 3562, the perforated coin was probably part of a string as it was located in the same place as: a bronze link, a deformed bronze sewing needle, a seashell, a stone token, two bronze circular plates with rivets and a deformed bronze sheet. The first two of these items could have formed part of a string together with the perforated coin.<sup>80</sup> The inventory of G – 4160 comprised only one perforated coin, located on the chest of the deceased, which could have functioned as a standalone pendant around the neck. The fact that it was discovered with remnants of cloth does not necessarily mean it had been sewn onto the clothes, especially as it is an antoninianus with a single perforation made at 12 o'clock on the obverse.<sup>81</sup> Coins with two perforations are rare at the necropolises of Viminacium.<sup>82</sup> A total of three have been recorded so far, one of which was in G – 4288 and represented part of a necklace discovered around the neck of the deceased. Along with the coin with two perforations, the string comprised: a bronze bulla, a pendant made of amber, ceramic, bone and a snail shell, and a number of glass paste beads. In the case of G – 227, the only item in the inventory was a triply perforated coin discovered next to the pelvis and, therefore, it is unlikely to have functioned as jewellery. In G – 342, due to the poorly preserved osteological remains, it was not pos-

<sup>79</sup> Спасић-Ђурић 2008: 124-128, Sl. 1,2.

<sup>80</sup> Kosti gotovo da nisu očuvane, te ostaje nepoznato mesto nalaza u odnosu na skelet pokojnika.

<sup>81</sup> Antoninijan Aurelijana probušen je sa strane aversa, na 12 sati njegove ose. Sve ovo upućuje da je namera bila izložiti pogledu avers i da je najverovatnije imao funkciju privjeska. Ostaci tkanine su jednostavno aplicirani delovi odeće pokojnika.

<sup>82</sup> Na nekropoli Više Grobalja nisu pronađeni.

<sup>79</sup> Спасић-Ђурић 2008: 124-128, Fig. 1, 2.

<sup>80</sup> The bones are extremely poorly preserved, so the place of finding in relation to the skeleton remains unknown.

<sup>81</sup> The antoninianus of Aurelian is perforated on the obverse side at 12 o'clock. All this suggests that the intention was to expose the obverse to view and that it most likely functioned as a pendant. The remnants of cloth are merely pieces of the deceased's clothes.

<sup>82</sup> At the necropolis of Više Grobalja, they have not been recorded.

pretpostaviti da je perforirani novčić bio u funkciji privjeska, pošto je pronađen na grudima pokojnika. Što ne možemo reći za G – 3541 gde su kosti poremećene, a među njima je kao jedini prilog pronađen perforirani novčić.

Od pet jednom i jednog tri puta perforiranog novčića pronađenih u grobovima kremiranih pokojnika, samo jedan predstavlja deo nakita (privezak na minđuši), dok za ostale nema elemenata u prilog ovoj tvrdnji. U pitanju je G1 – 720 kod koga su, između keramičkih nalaza, na istom mestu pronađeni: as Nerona (kat. 102), minđuša od srebrne žice sa perforiranim denarom Hadrijana,<sup>83</sup> bronzani privezak u formi falusa i gvozdeni prsten.<sup>84</sup> Kod ostalih grobova sa perforiranim novčićima, analizirajući položaj svih priloga u grobovima, ne možemo izvesti zaključak da su imali funkciju privjeska u kompozitnim delovima nakita. U G1 – 110 perforirani novčić se najverovatnije nalazio u kovčežiću od koga su pronađeni delovi bronzane oplata, drška i brava. Pored njega sadržaj su činili i bronzano ogledalo, bronzana kutijica za amulet ukrašena emajlom i kružna bronzana fibula.<sup>85</sup> U G1 – 542 konstatovani su u prvom etažu, delovi bronzane oplata kasete, u kojoj su se nalazili bronzano ogledalo i bula, pošto su pronađeni zajedno. Perforirani novac je, međutim, pronađen u drugom etažu kao jedini prilog. U oba primera, bilo da se novčić nalazio u kutiji ili izvan nje, ostaje da je mogao predstavljati samostalni privezak ili je imao nekakvu sasvim drugu ulogu.

Već smo na primeru nekropole Više Grobalja pokazali da ne stoje izvesna mišljenja izneta u naučnoj javnosti u pogledu funkcije tri puta perforiranih novčića, koji bi po njima bili prišivani na odeću.<sup>86</sup> Ovo potvrđuju i nalazi perforiranih novčića sa nekropole Pećine, te možemo zaključiti da, bar u primeru viminacijumskih nekropola, ovi nalazi ukazuju pre na njihovu upotrebu kao nakita, odnosno dela ogrlice u većini primera. U kontekstu uloge novca u pogrebnim ritualima zanimljivo je primetiti da perforirani novčići, sa dve viminacijumske nekropole, u pojedinim

sible to determine the position of the grave goods in relation to the skeleton. A triply perforated coin and a glass paste bead were discovered together and could have formed part of a string with two pendants. In a different place in the grave, a pendant was discovered, modelled from the belly of a ceramic vessel in secondary use, with three perforations, and, next to it, a small gold hoop-type earring. Based on the situation in G – 2669, it can be assumed that the perforated coin was used as a pendant, as it was discovered on the chest of the deceased. This cannot be claimed for G – 3541, where the bones were disturbed and, among them, the perforated coin was the only find.

Of five singly and one triply perforated coins discovered in cremation burials, only one represents a part of jewellery (pendant on an earring), while for the others there are no elements in support of this assertion. The grave in question is G1 – 720, where, among the ceramic finds, the following were noted: an as of Nero (cat. 102), a silver wire earring with a perforated denarius of Hadrian,<sup>83</sup> a bronze phallic-shaped pendant and an iron ring.<sup>84</sup> As for the other graves with perforated coins, by analysing the position of all the grave goods, it cannot be concluded that they functioned as pendants in composite pieces of jewellery. In G1 – 110, the perforated coin was probably located in a small chest, of which pieces of bronze plating, a handle and the lock were discovered. In addition, the contents also included a bronze mirror, a small bronze box, decorated with enamel, for an amulet and a circular bronze fibula.<sup>85</sup> In G1 – 542, within the first level, there were pieces of the bronze plating of a box, which had contained a bronze mirror and a bulla, as they were found together. A perforated coin, however, was the sole find within the second level. In both cases, irrespective of whether the coin was inside or outside the box, it could have represented a standalone pendant, or it may have had some other, completely different function.

As already shown in the example of the Više Grobalja necropolis, certain opinions expressed in scientific circles with regard to the function

<sup>83</sup> Cf. *supra* ref. 63.

<sup>84</sup> Спасић-Ђурић 2008: 147. Pored dva navedena primera novca u grobu je pronađen još jedan as Hadrijana ali u drugom delu grobne rake.

<sup>85</sup> Svi navedeni predmeti pronađeni su na istom mestu u okviru prvog etaža.

<sup>86</sup> Vojvoda, Mrđić 2015: 35, ref. 51, 52.

<sup>83</sup> Cf. *supra* ref. 63.

<sup>84</sup> Спасић-Ђурић 2008: 147. In addition to the two aforementioned coins, another as of Hadrian was discovered in the grave, but in a different part of the burial pit.

<sup>85</sup> All the listed items were discovered in the same place within the first level.

primerima čine delove kompozitnih ogrlica u dečjim i ženskim grobovima, sa drugim privescima koji imaju apotropejsku funkciju. Žene i deca su, za razliku od muškaraca, smatrani posebno slabim i podložnim zlim uticajima, te da ih je bilo neophodno zaštititi za života ali i po smrti. Na ovakvim niskama pojavljuju se: lunulasti privesci, bronzana zvonca, zubi divljih svinja, školjke i puževi, bronzane bule, privesci u vidu minijaturnih alatki, privsci u vidu falusa, perle sa okcima, perle crvene boje, itd. Pored ovih privezaka koji nose apotropejski karakter, pojavljuju se i drugi (novac, obične perle, alkice) koji su imali dodatnu funkciju u oglašavanju ili zveckanju.<sup>87</sup> Međutim, ne znači da je u svakom slučaju novac imao samo ulogu zveckanja, kao što pokazuje primer sa nekropole Više Grobalja. U grobu odrasle, verovatno ženske, individue (G – 596) pronađena su na grudima pokojnika dva srebrna lunulasta priveska i jednom perforirani denar Hadrijana sa reversnom predstavom polumeseca i zvezda. Perforacija je načinjena sa strane aversa na 6 sati, a sa strane reversa na 12 sati. Proizilazi da je pogledu bio izložen revers sa predstavom polumeseca. Lunulasti privesci jedni su od najstarijih i stalno prisutnih amuleta u antici. Dva lunulasta priveska i novac privezak sa pomenu- tom predstavom sigurno ne predstavljaju slučajnost. Novac je pažljivo izabran i probušen tako da je pogledu bila izložena reversna predstava, te se može tumačiti u apotropejskom smislu kao i lunulasti privesci.<sup>88</sup> Navedeni primer ukazuje na neophodnost detaljne provere svakog perforiranog novčića iz grobnih celina u kojima oni čine delove niski (mesta na kojima su načinjene perforacije, izbor reversnih motiva, itd.).

Osim u grobnim celinama, perforirani novčići (22) pronađeni su i u slojevima između ili iznad grobova i korišćeni su u pogrebnim ritualima prilikom daća. Registrovani su jednom (7 kom.), dva puta (2), tri puta (12) i četiri puta (1) perforirani novčići. Većina ih je nađena pojedinačno i nemamo elemenata u prilog tvrdnji da su mogli činiti delove kompozitne niske. Jedino je u primeru dva novčića, oba tri puta probušena, pronađena zajedno sa bronzanom bulom i fragmentom pojase oplata od bronzanog lima, u dnevniku istraživanja izneta konstatacija da se verovatno radi o dnu uništenog groba sa krema-

of triply perforated coins are invalid, stating that they were sewn onto the clothes.<sup>86</sup> This is further confirmed by perforated coins from the necropolis of Pećine, and can therefore be concluded that, at least in the case of the Viminacium necropolises, these finds point more to their use as jewellery, specifically, parts of necklaces in most cases. In the context of the role of coins in funerary rituals, it is interesting to note that perforated coins from the two Viminacium necropolises, in some cases, constitute parts of composite necklaces in children's and women's graves, together with other pendants that have an apotropaic function. Unlike men, women and children were considered particularly weak and susceptible to evil influences, and, as such, had to be protected during their lifetime, as well as after death. Such strings comprise: lunate pendants, small bronze bells, wild boar teeth, seashells and snail shells, bronze bullae, pendants in the form of miniature tools, phallic-shaped pendants, beads with eyelets, red-coloured beads, etc. Besides these pendants with an apotropaic quality, others are also encountered (coins, plain beads, small links), with the additional function to produce sounds or to jingle.<sup>87</sup> However, it does not mean that in every case coins only had the role of jingling, as can be seen in an example from the necropolis of Više Grobalja. In a grave of an adult, probably a female individual (G – 596), on the chest of the deceased, two silver lunate pendants were discovered along with a singly perforated denarius of Hadrian, with a reverse depiction of a crescent and stars. The perforation was made on the obverse side at 6 and on the reverse at 12 o'clock. Therefore, the reverse with the crescent depiction was exposed to view. Lunate pendants are one of the oldest and ever-present amulets in Antiquity. The two lunate pendants and the coin pendant with the aforementioned depiction are certainly not a coincidence. The coin was carefully selected and perforated so as to expose the reverse depiction to view and can be interpreted in an apotropaic sense, just like the lunate pendants.<sup>88</sup> This example points to the necessity for a thorough examination of each perforated coin from graves in which they form parts of strings (the position of perforations, the choice of reverse motifs, etc.).

<sup>86</sup> Vojvoda, Mrđić 2015: 35, ref. 51, 52.

<sup>87</sup> Vojvoda 2015: 56, ref. 18.

<sup>88</sup> Vojvoda 2015: 54-56.

cijom.<sup>89</sup> Zanimljiva je pojava četiri puta perforiranog novčića koji je do sada jedini zabeležen na obe nekropole. Pronađen je neposredno nakon skidanja žrtvene površine u sondi 124. Perforacije su okrugle i raspoređene na 3, 5, 7 i 9 sati u odnosu na osu aversa, a na 9, 11, 1 i 3 sata u odnosu na osu reversa. Činjenice da su perforacije načinjene sa strane reversa, da su raspoređene u gornjoj polovini reversa, kao i da ne oštećuju reversnu predstavu (ženska figura sedi na levo, drži rog izobilja) svedoče da je pogledu bio izložen revers, na ma koji način da je novčić bio okačen.

## ZASTUPLJENOST REVERSNIH TIPOVA

Na moguću ulogu reversnih tipova u funeralnom kontekstu ukazali su Agnes Gaždac-Alefeldi i Kristijan Gaždac (Á. Gázdac-Alföldy, C. Gázdac) na primeru nekropola u Brigetiju i Apulumu. Došli su do zaključka da značaj sekundarnog simboličnog značenja ponude novca ne bi trebalo pruvetičavati ali da podaci pokazuju dublju vezu između predstava na novcu i sujeverija ili pobožnog mentaliteta ljudi.<sup>90</sup> Smatrali smo da je takva vrsta analize korisna, ali da je potrebno sakupiti istovrsne podatke sa što većeg broja nekropola, čijim poređenjem bi dobili jasniju sliku

<sup>89</sup> Dva novčića pronađena su zajedno, u neposrednoj blizini druga tri nalaza (C – 7199, 7200, 7201). Na istom mestu konstatovani su tragovi gara i pepela – verovatno dno uništenog groba sa kremacijom; *cf.* dnevnik terenskih istraživanja: 1979.

<sup>90</sup> Autori su poredili nalaze novca prema reversnim predstavama upoređujući rezultate sa navedenih nekropola i iz naselja. Na obe nekropole u najvećem procentu zastupljeni su religiozni reversni tipovi; *cf.* Gázdac-Alföldy, Gázdac 2009: 166-170. Metod koji smo primenili u primeru nekropole Više Grobalja moglo je biti jedino poređenje reversnih tipova pronađenih u grobovima i u slojevima na nekropoli. Razlog za to je nedovoljna istraženost civilnog naselja i logora na Viminacijumu u odnosu na nekropole da bi se analiza mogla obaviti. Zaštitna arheološka istraživanja na Viminacijumu već decenijama su uslovljena potrebama širenja površinskog kopa uglja, koja za posledicu imaju daleko veću istraženost nekropola u odnosu na vojni logor i civilno naselje. Iz tog razloga, u ovom trenutku, poređenje postojećih numizmatičkih nalaza sa viminacijumskih nekropola i naselja ili logora ne bi dali ni približno pravu sliku; *cf.* Vojvoda, Mrđić 2015:37.

Aside from in graves, perforated coins (22) were also noted in layers between or above graves, and were used in funerary rituals during commemorative repasts. Specimens with one (7 coins), two (2), three (12) and four (1) perforations were recorded. Most of them were discovered individually and there are no elements to support the assertion that they might have constituted parts of composite strings. Only in the case of two coins, both triply perforated, which were found together with a bronze bulla and a fragment of belt plating of bronze sheet, does the fieldwork diary state that this was probably the bottom of a destroyed cremation grave.<sup>89</sup> The occurrence of a coin with four perforations is interesting as it is the only one of its kind recorded so far at either necropolis. It was discovered in trench 124 immediately after the stripping of the sacrificial area. The perforations are circular and arranged at 3, 5, 7 and 9 o'clock on the obverse, and at 9, 11, 1 and 3 o'clock on the reverse. The fact that the perforations were made on the reverse side, that they are arranged in the upper half of the reverse and that they do not damage the reverse depiction (female figure seated left, holding cornucopiae) testifies that the reverse was exposed to view, no matter how the coin was worn.

## INCIDENCE OF REVERSE TYPES

Ágnes Gázdac-Alföldy and Cristian Gázdac pointed to the possible role of reverse types in a funerary context with the example of the necropolises of Brigetio and Apulum. They came to the conclusion that the importance of the secondary symbolical meaning of the coin offering should not be overstated, although the data does show a deeper connection between the depictions on coins and the superstition or the pious mentality of people.<sup>90</sup> Such analysis was considered useful,

<sup>89</sup> The two coins were discovered together, in close proximity to the other three finds (C – 7199, 7200, 7201). In the same place, traces of soot and ash were noted – probably the bottom of a destroyed cremation grave; *cf.* fieldwork diary: 1979.

<sup>90</sup> The authors compared coin finds based on reverse depictions, using the results from the previously mentioned necropolises and from the settlements. The incidence of religious reverse types at both necropolises represents the

Slika 4 - Grob G-1013 (foto dokumentacija Arheološkog instituta).

Figure 4 - Grave G-1013 (photo documentation of the Institute of Archaeology).

da li su i u kojoj meri izbor reversnih tipova imao uticaja u pogrebnim ritualima. Iz tih razloga smo prilikom analize numizmatičkog materijala sa nekropole Više Grobalja primenili isti metod, na osnovu koga smo dobili različite rezultate u odnosu na nekropole u Brigetiju i Apulum.<sup>91</sup> Već ovi rezultati pokazali su da je ovakva analiza korisna i da ćemo sakupljanjem podataka sa različitih nekropola dobiti podatke o raznorodnosti u zastupljenosti motiva u pojedinom regionima ili provincijama.<sup>92</sup>

Kao i u primeru nekropole Više Grobalja odlučili smo se za istu vrstu analize u kojoj smo po-

91 Vojvoda, Mrđić 2015: 38-39, Grafikoni 9-10.

92 U svom kasnijem članku K. Găzdac (C. Găzdac 2014: 95-140) je analizirao nalaze novca sa nekropola u Karnuntumu (Carnuntum), Akvinkumu (Aquincum) i Matirici (Matrica) poput ranijih analiza K. Perasi (C. Perassi 1999: 43-69). Na taj način analizirao je reversne tipove iz grobnih celina navedene tri nekropole prema njihovom eshatološkom značenju. Počev od onih koji imaju direktne eshatološke interpretacije (sa legendama AETERNITAS, DIVI, DIVA; sa eshatološkim simbolima: polumesec sa zvezdama, kaprikorn, paun; boginjama koje su povezane sa eshatološkim ritualima: Junona, Dijana; personifikacije blagonaklonosti i pijeteta: Fortuna, Providencija, Spes, Pijetas) do drugih koje nemaju direktne eshatološke konotacije, ali bi se u funeralnom kontekstu mogle protumačiti tako (npr. Salus se u funeralnom kontekstu ne odnosi na fizičko zdravlje, već na dobre želje za spasenjem posle smrti; itd.).

but there is a requirement to collect equivalent data from as many necropolises as possible, the comparison of which would allow a better insight into whether the choice of reverse types had any influence on funerary rituals, and to what extent. For these reasons, during the analysis of the numismatic material from the necropolis of Više Grobalja, the same method was applied, based on which different results were obtained compared to the necropolises of Brigetio and Apulum.<sup>91</sup> These results alone have shown that such analysis is useful and that by collecting data from different necropolises, information regarding the diversity and incidence of motifs in some regions or provinces can be obtained.<sup>92</sup>

As in the case of the Više Grobalja necropolis, the same type of analysis was chosen, in which the reverse types of coins discovered in graves were

largest percentage; cf. Găzdac-Alföldy, Găzdac 2009: 166-170. The method that was applied in the case of the Više Grobalja necropolis could only involve the comparison of reverse types discovered in graves and layers at the necropolis. The reason for this is that the civilian settlement and the camp at Viminacium are insufficiently researched compared to the necropolises for the analysis to be carried out. Rescue archaeological investigations at Viminacium have, for decades, been conditioned by the necessity to expand the opencast coal mine, which has resulted in the necropolises being more extensively researched compared to the military camp and the civilian settlement. Therefore, at this point, the comparison of existing numismatic finds from the Viminacium necropolises and the settlement or camp would not even come close to providing a real picture; cf. Vojvoda, Mrđić 2015:37.

91 Vojvoda, Mrđić 2015: 38-39, Graphs 9 and 10.

92 In his later article, C. Găzdac (C. Găzdac 2014: 95-140) analysed coin finds from the necropolises of Carnuntum, Aquincum and Matrica, in a similar way to the earlier analyses by C. Perassi (C. Perassi 1999: 43-69). Thus, he analysed reverse types from graves of the three necropolises based on their eschatological meaning, starting from those that have direct eschatological interpretations (with legends of AETERNITAS, DIVI, DIVA; with eschatological symbols: crescent with stars, Capricorn, peacock; goddesses associated with eschatological rituals: Juno, Diana; personifications of benevolence and reverence: Fortuna, Providentia, Spes, Pietas) to others that do not have direct eschatological connotations, but could be interpreted as such in a funerary context (e.g. Salus, in a funerary context, does not relate to physical health, but to good wishes for salvation after death, etc.).

redili reversne tipove novčića pronađenih u grobovima i onih iz slojeva sa nekropole.<sup>93</sup> I ovom prilikom koristimo isto sažimanje reversnih tipova u grupe radi lakšeg poređenja: I – civilni, II – vojni, III – religiozni sa tri podgrupe: IIIa – personifikacije blagonaklonosti, IIIb – konsekrativni tipovi/žrtvovanja/pijetet, IIIc – opšti religiozni (Tabele 12 i 13; Grafikoni 8 i 9). Analiza reversnih tipova, iz više razloga, hronološki je ograničena na vreme od Avgusta do početka tetrarhije. Reversni motivi već od sredine 3. v. postaju sve više stereotipni i njihov broj se smanjuje, da bi u 4. v. njihova raznovrsnost bila u velikoj meri osiromašena, svedena na mali broj predstava. Postepeni i sve veći upliv hrišćanstva ogledao se kako u ikonografiji predstava na novcima, tako i u pogrebnim ritualima i ulozi koju je novac u to vreme imao u njima. U analizu su uključeni samo primerici kod kojih je bilo moguće odrediti reversni tip.

<sup>93</sup> O razlozima za izbor ovog metoda *cf. supra* ref. 90.

compared to those from layers at the necropolis.<sup>93</sup> Here, also, the same summary of reverse types into groups is applied to facilitate the comparison: I – civilian, II – military, III – religious with three subgroups: IIIa – personifications of benevolence, IIIb – consecration/sacrifice/reverence, IIIc – general religious (Tables 12 and 13; Graphs 8 and 9). The analysis of reverse types is, for a number of reasons, chronologically limited to the time from Augustus to the beginning of the Tetrarchy. Reverse motifs, starting from the mid-3<sup>rd</sup> century, became progressively more stereotyped and their number decreased, so that in the 4<sup>th</sup> century their diversity was largely diminished and reduced to a small number of depictions. The increasing influence of Christianity was reflected in the iconography on coins as well as in the funerary rituals and the role that coins at that time had in them. The analysis included only specimens for which it was

<sup>93</sup> About reasons for choosing this method, *cf. supra* ref. 90.

Tabela 13 – Tematske grupe reversnih motiva primeraka pronađenih u slojevima na nekropoli (1.-3. v.).  
Table 13 – Thematic groups of reverse motifs on coins from layers (1st – 3rd c.).

Na nekropoli Pećine je u okviru grobnih celina (G i G1) pronađeno ukupno 1262 novčića koji su datovani od 1. do 3. v. (Tabela 4). Od tog broja kod 674 (53,40%) bilo je moguće odrediti tip reversne predstave. Numizmatičkim nalazima pronađenim u slojevima na nekropoli datovanim od 1. do 3. v. pripada 1046 kom. od kojih je kod 503 (48,08%) utvrđen tip reversne predstave. U slučaju obe analize, nalazi sa nekropole Pećine u odnosima zastupljenosti pojedinih reversnih tipova odgovaraju rezultatima dobijenim na nekropoli Više Grobalja. Međutim, uočavaju se bitne razlike u znatno manjoj zastupljenosti vojnih motiva u korist civilnih na nekropoli Pećine u odnosu na Više Grobalja: u G i G1 - vojni 35 % prema 46% i civilni 34% prema 16%; u slojevima – vojni 35% prema 42% i civilni 31% prema 20%. Ista razlika primetna je i u zastupljenosti religioznih B motiva: u G i G1 6% prema 18%; u slojevima 7% prema 15%. Dok zastupljenost religioznih A i C motiva ostaje na obe nekropole u približno istim procentima.<sup>94</sup> Manja zastupljenost vojnih motiva na nekropoli Pećine u odnosu na Više Grobalja posledica je daleko manje prisutnosti novca bitinijske kovnice Nikeje (290 prema 170 kom.).

Obe viminacijumske nekropole, bez obzira na međusobne razlike u procentualnim odnosima pojedinih reversnih tipova, zadržavaju isti redosled zastupljenosti. Što su rezultati sasvim druga-

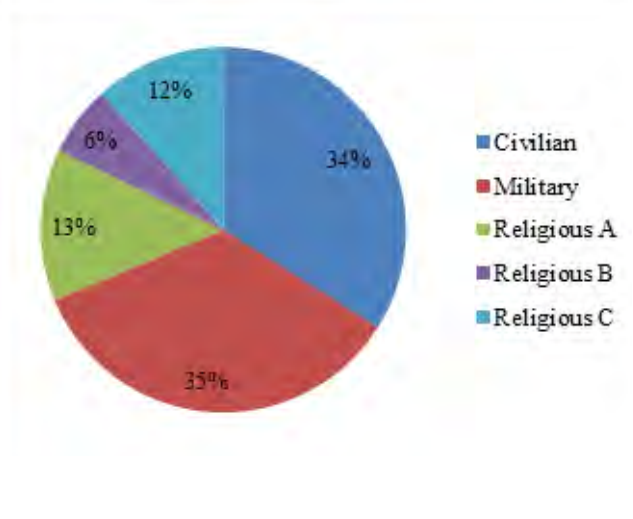

possible to determine the reverse type.

At the necropolis of Pećine, within graves (G and G1), a total of 1,262 coins were discovered, dated from the 1<sup>st</sup> to the 3<sup>rd</sup> century (Table 4). Of that number, in 674 (53.40%) it was possible to determine the type of reverse depiction. The numismatic finds from layers at the necropolis, dated from the 1<sup>st</sup> to the 3<sup>rd</sup> century, comprise 1,046 coins, of which in 503 cases (48.08%) the type of reverse depiction was determined. In both analyses, finds from the necropolis of Pećine, in terms of the ratios of incidence of certain reverse types, correspond to the results obtained from the necropolis of Više Grobalja. However, significant differences are observed in the much lower incidence of military motifs in favour of civilian at the necropolis of Pećine compared to Više Grobalja: in G and G1 – military 35% to 46% and civilian 34% to 16%; in layers – military 35% to 42% and civilian 31% to 20%. The same difference is noted in the incidence of religious B motifs: in G and G1 – 6% to 18%; in layers – 7% to 15%. The percentages of incidence of religious A and C motifs are about the same at both necropolises.<sup>94</sup> A smaller incidence of military motifs at the necropolis of Pećine compared to Više Grobalja results from far fewer coins from the Bithynian mint of Nicaea (290 to 170 coins).

Both Viminacium necropolises, regardless of the differences in percentage ratios between

čiji od onih dobijenih analizama na nekropolama u Brigetiju i Apulumu. Na tri nekropole u Brigetiju najbolje su zastupljeni reversni tipovi grupe IIIa i b (sa 51%), slede grupa vojničkih tipova (19%), i grupe civilnih i opštih religioznih (IIIc) sa po 15%. Nekropola u Apulumu dala je slične rezultate: grupe IIIa i IIIb 49%, civilni tipovi 21%, vojni 17% i IIIc 13%.<sup>96</sup>

Na nekropoli Pećine ne postoje bitne razlike u zastupljenosti reversnih tipova primeraka pronađenih u grobovima i onih u slojevima na nekropoli, koje bi ukazivale na različitu ulogu motiva na novcima u pogrebnim ritualima prilikom sahrana i kasnijih prilikom daća. Kao i na nekropoli Više Grobalja uočava se veće odstupanje u zastupljenosti reversnih motiva između primeraka koji pripadaju 1. i 2. v. i onih nakon 193.g. Ako

certain reverse types, maintain the same order of incidence. These results are completely different from those obtained by the analyses at the necropolises of Brigetio and Apulum. At the three necropolises of Brigetio, the most prevalent are the reverse types of group IIIa and b (51%), followed by the group of military types (19%), then civilian and general religious (IIIc), each with 15%. The necropolis of Apulum displayed similar results: groups IIIa and b – 49%, civilian types – 21%, military – 17% and IIIc – 13%.<sup>96</sup>

At the necropolis of Pećine, there are no significant differences in the prevalence of reverse type specimens discovered in graves and those from layers at the necropolis, which would indicate a different role for motifs on coins in funerary rituals during burials to that during the

<sup>95</sup> U Grafikonima 9 i 10 procentni su izraženi u zaokruženim vrednostima.

<sup>95</sup> In Graphs 9 and 10, the percentages are shown in rounded values.

<sup>96</sup> Găzdac-Alföldy, Găzdac 2009: 171, Fig. VII-VIII.

bi posmatrali dobijene podatke prema vekovima, dobijamo sledeće podatke u Tabelama 14 i 15.

Iz dobijenih procenata zapaža se očita razlika u daleko manjoj zastupljenosti pojedinih podgrupa religioznih tipova u 3. v. (koja je nešto izraženija u grobnim celinama nego u slojevima) i sa druge strane, u velikom povećanju vojnih motiva.

subsequent commemorative repasts. As with the necropolis of Više Grobalja, a larger discrepancy in the incidence of reverse motifs is discerned between the specimens from the 1<sup>st</sup> and the 2<sup>nd</sup> century and those after 193. If the acquired data is observed according to century, the following picture is obtained, as shown in Tables 14 and 15.

G/G1	I – Civilni/ Civilian	II – Vojni/ Military	IIIa - Personifikacije blagonaklonosti/ Personifications of benevolence	IIIb - žrtvovanja/ drugi svet/ pijetet sacrifice/ other world/ piety	IIIc – Opšti religiozni/ General religious	% prema vekovima/ according to century <sup>97</sup>	% svih grupa prema vekovima/ all groups according century

Tabela 14 – Procentualna zastupljenost grupa reversnih motiva primeraka iz grobnih celina po vekovima.

Table 14 – Percentages of the thematic groups reverse motifs from graves according to century.

Za razliku od nekropole Više Grobalja, na Pećinama su tokom 3. v. u većem procentu prisutni i reversni motivi civilnog karaktera. Reversni motivi religioznih podgrupa a, b i c, koji potiču iz prva dva veka, jasno pokazuju daleko veću zastupljenost u odnosu na one istih grupa iz 3. v. Izuzetak predstavlja podgrupa IIIa u nalazima 1. v. iz slojeva (4,44%). Uopšte uzevši sve tri podgrupe 1. v. iz slojeva pokazuju nešto manju zastupljenost (zajedno 28,90%) u odnosu na iste podgrupe 1. v. iz grobnih celina (zajedno 43,59%). Ova razlika nije primećena kod religioznih podgrupa novca

From the percentages, an obvious difference can be observed in the far smaller incidence of certain subgroups of religious types in the 3<sup>rd</sup> century (which is somewhat more pronounced in graves than in layers) and, on the other hand, the significant increase in military motifs. Unlike the necropolis of Više Grobalja, at Pećine, during the 3<sup>rd</sup> century, reverse motifs of a civilian character also appear in a larger percentage. The reverse motifs of religious subgroups a, b and c that originate from the first two centuries clearly demonstrate a much larger incidence compared to

97 Procenat zastupljenosti reversnih predstava po vekovima izračunat je od ukupnog broja novčića za svaki vek posebno (novac svakog veka uzet je kao 100%). Isto važi i za tabelu 12.

98 Do 193. g. Novac Septimija Severa i porodice svrstani su u 3. v. prilikom analize.

99 U poslednjem redu Tabele 11 i 12 dati su procenti zastupljenosti grupa reversnih motiva prikazanih u Grafikonima 7 i 8 (od 1. do 3. v. zajedno).

97 The percentage of incidence of reverse depictions according to century was calculated from the total number of coins for each century separately (coins from each century were taken as 100%). The same applies to Table 12.

98 Coins of Septimius Severus and family up to 193 were classified into the 3<sup>rd</sup> century during the analysis.

99 The last row of Tables 11 and 12 presents percentages of incidence of the groups of reverse motifs shown in Graphs 7 and 8 (from the 1<sup>st</sup> to 3<sup>rd</sup> century collectively).

Slojevi/ Layers	I – Civilni/ Civilian	II – Vojni/ Military	IIIa - Personifikacije blagonaklonosti/ Personifications of benevolence	IIIb - žrtvovanja/ drugi svet/ pijetet sacrifice/ other world/ piety	IIIc – Opšti religiozni/ General religious	% prema vekovima/ according to century	% svih grupa prema vekovima/ all groups according century

Tabela 15 – Procentualna zastupljenost grupa reversnih motiva primeraka iz slojeva po vekovima.  
Table 15 – Percentages of the thematic groups reverse motifs from layers according to century.

2. veka, gde u slojevima iznosi 51,80% i u grobnim celinama 45,20%. Ako zbirno posmatrano sve tri podgrupe religioznih tipova, proizilazi da je religiozna grupa (III) zastupljena u većem procentu od civilnih i vojnih motiva tokom prva dva veka.<sup>100</sup> Podgrupama III a i b pripadaju reversni motivi koji imaju ili mogu imati eshatološko značenje. Njima bi se mogli priključiti i neki motivi podgrupe IIIc, oni sa božanstvima koja su povezana sa eshatološkim ritualima. Ovi motivi se pojavljuju daleko ređe u okviru grobnih celina iz 3. v. (sve tri podgrupe zajedno 11,50%), dok nalazi iz slojeva pokazuju njihovo nešto veće prisustvo (23,96%), pri čemu su u oba primera najbrojniji opšti religiozni motivi (IIIc). Motivi sa direktnim eshatološkim značenjem (IIIb) gotovo da nestaju na Pećinama iz grobnih celina u 3.v. (0,88%), dok su u slojevima prisutni sa neznatno većim procentom (3,00%).

Dominacija reversnih tipova grupe II (vojni) tokom 3. v. potvrđena je na obe Viminacijumske nekropole, što ne odgovara rezultatima dobijenim istom analizom u primeru nekropola iz Brigetija i Apuluma. I na ove dve nekropole zabeleženo je povećanje procentualne zastupljenosti vojnih tipova u odnosu na religijske u 3. v. Mada u oba slučaja to povećanje ne utiče na zastuplje-

those of the same groups from the 3<sup>rd</sup> century. The exception is subgroup IIIa among the 1<sup>st</sup>-century finds from layers (4.44%). Generally, all three subgroups from the 1<sup>st</sup> century from layers exhibit a somewhat smaller incidence (together 28.90%) compared to the same subgroups from the 1<sup>st</sup> century from graves (together 43.59%). This difference was not noted in religious subgroups from the 2<sup>nd</sup> century, where in layers it amounts to 51.80% and in graves to 45.20%. If all three subgroups of religious types are observed collectively, then the religious group (III) represents a larger percentage of incidence than civilian and military motifs during the first two centuries.<sup>100</sup> Subgroups IIIa and b include reverse motifs that have or may have an eschatological meaning. Some motifs of subgroup IIIc, those with deities associated with eschatological rituals, could also be included among them. These motifs are far less frequent within graves from the 3<sup>rd</sup> century (all three subgroups together 11.50%), while the finds from layers show their somewhat larger presence (23.96%), with general religious motifs (IIIc) being in both cases the most common. Motifs with a direct eschatological meaning (IIIb) practically disappear from 3<sup>rd</sup>-century graves at Pećine (0.88%), while in layers, they are present

<sup>100</sup> Jedini izuzetak uočljiv je kod nalaza iz sloja na nekropoli 1. v. gde su u odnosu na religiozne, bolje zastupljeni civilni tipovi.

<sup>100</sup> The only exception is observed in finds from layers at the necropolis from the 1<sup>st</sup> century, where, compared to religious, civilian types are more prevalent.

Slika 5 - Grob G1-221 (foto dokumentacija Arheološkog instituta)

Figure 5 - Grave G1-221 (photo documentation of the Institute of Archaeology).

nost religioznih tipova koji i dalje, na nekropola u Brigetiju i Apulumu, ostaju u konačnom procentu dominantni. Kao što je već pomenuto,<sup>101</sup> analizirajući numizmatičke nalaze iz grobnih celina sa nekropola u Karnuntumu (Carnuntum), Akvinkumu (Aquincum) i Matirici (Matrica), K. Găzdac primenio je sličan ali izmenjen metod. Sa svih navedenih nekropola, reverse predstave bilo je moguće odrediti kod 102 primerka novca. Od tog broja za 42 novčića određeno je da imaju direktnu eshatološku interpretaciju (kat. 1-42). Reversni motivi sa mogućim eshatološkim porukama registrovani su kod 28 primeraka novčića (kat. 43-70). Dok, u primeru 32 reversna motiva nije bilo moguće pretpostaviti eshatološku vezu predstave na novcu i funeralnog konteksta (kat. 71-102).<sup>102</sup> Proizilazi da 68,62% numizmatičkih nalaza iz grobova ima direktno ili indirektno eshatološko značenje, dok se za grupu koju čine civilni i vojni tipovi to ne može reći (31,38%).

U zaključku ovog poglavlja možemo konstatovati da se, na osnovu do sada analiziranih nekropola iz Gornje i Donje Panonije (3) i Dakije (1) i dve Viminacijumske, potvrđuje prvobitno uočena razlika u zastupljenosti tipova reversnih motiva. Dok na Panonskim i jednoj Dačkoj dominiraju religiozni tipovi, na dve najveće Viminacijumske nekropole najbolje su zastupljeni vojni motivi. Razlog velike zastupljenosti vojnih

with a slightly higher percentage (3.00%).

The dominance of the reverse types of group II (military) during the 3<sup>rd</sup> century was confirmed at both Viminacium necropolises, which does not correspond to the results obtained in the same analysis from the necropolises of Brigetio and Apulum. At these two necropolises, there is also an increase in the percentage of military types compared to religious in the 3<sup>rd</sup> century. In both cases, however, this increase does not affect the incidence of religious types, which, at the necropolises of Brigetio and Apulum, remain dominant in the final percentage. As already mentioned,<sup>101</sup> by analysing numismatic finds from graves at the necropolises of Carnuntum, Aquincum and Matrica, C. Găzdac applied a similar but modified method. From all these necropolises, reverse depictions could be determined in 102 specimens. Of that number, 42 coins have a direct eschatological interpretation (cat. 1–42). Reverse motifs with possible eschatological messages were recorded in 28 specimens (cat. 43–70), whereas in the case of 32 reverse motifs it was not possible to find an eschatological connection between the depiction on the coins and the funerary context (cat. 71–102).<sup>102</sup> It follows, therefore, that 68.62% of the numismatic finds from graves have a direct or indirect eschatological meaning, while this cannot be stated for the group comprising civilian and military types (31.38%).

In the conclusion of this section, it can be noted that, based on the necropolises analysed thus far from Upper and Lower Pannonia (3), Dacia (1) and the two Viminacium necropolises, the originally observed difference in the incidence of reverse motif types is confirmed. While religious types are dominant at Pannonian and one Dacian necropolis, military motifs are the most prevalent at the two largest Viminacium necropolises. The reason for the large incidence of military motifs at the Viminacium necropolises during the 3<sup>rd</sup> century (58.40% in graves and 44.57% in layers) is definitely the large presence of coinage from the Bithynian mint of Nicaea in circulation in Upper Moesia in general.<sup>103</sup> It has already been noted that, during the first two centuries,

motiva na Viminacijumskim nekropolama tokom 3. v. (58,40% u grobnim celinama i 44,57% u slojevima) sasvim sigurno predstavlja veliko prisustvo novca Bitinijske kovnice Nikeje u opticaju u Gornjoj Meziji uopšte.<sup>103</sup> Već je pomenuto da su tokom prva dva veka i na Pećinama dominantni religiozni tipovi (posmatrano zbirno podgrupe III a, b i c) u odnosu na vojne. Skloni smo zaključku da na ukupnu dominantnu prisutnost vojnih motiva na nekropolama Više Grobalja i Pećine utiče masovna pojava nikejskog bronzanog novca sa vojnim motivima u opticaju Gornje Mezi-je tokom treće i četvrte decenije 3. v. Početkom ovog veka stekli su se višestruki uslovi koji su doveli do ovoga, a vezani su prvenstveno za očiti nedostatak sitnog bronzanog novca senatskih emisija u opticaju. Makedonske kovnice su u izvesnoj meri snabdevale Gornju Meziju novcem tokom prva dva veka. Nakon zatvaranja kovnice u Stobima, u vreme Karakaline vlade,<sup>104</sup> u Gornjoj Meziji se u većom količini pojavljuje u opticaju novac Nikeje.<sup>105</sup> Ovo prisustvo u opticaju najizrazitije je u vreme vladavine Aleksandra Severa i početkom vladavine Gordijana III. Nedostatak sitnog bronzanog novca u opticaju u Gornjoj Meziji, koji je privremeno nadomešćen Nikejskim izdanjima, bio je verovatno i glavni uzrok za otvaranje kovnice provincijalnog novca u Viminacijumu 239. g. a kasnije i u Sarmizegetusi u Dakiji.<sup>106</sup> Ovo očito nije bio slučaj sa Panonskim provincijama gde je zabeležena mala pristunost novca Nikeje u opticaju. Iz svega proizilazi kao mogućnost da je na različitu sliku zastupljenosti reversnih motiva viminacijumskih i panonskih nekropola uticala vanredno velika prisutnost novca Nikeje. Ova okolnost je, u okviru monetarne politike koja se manifestovala upravo u Gornjoj Meziji, uzrokovala dobijene rezultate.

Za razliku od nekropole Više Grobalja, na Pe-

religious types (collectively observed subgroups IIIa, b and c) are dominant at Pećine as well compared to military. There is a tendency to conclude that the overall dominance of military motifs at the necropolises of Više Grobalja and Pećine is influenced by the large occurrence of Nicaean bronze coinage with military motifs in circulation in Upper Moesia during the third and fourth decade of the 3<sup>rd</sup> century. At the beginning of that century, several conditions that led to this were met, which were primarily related to the obvious shortage of small bronze coins in circulation that were issued by the Senate. Macedonian mints, to some extent, supplied Upper Moesia with coinage during the first two centuries. After the closure of the mint in Stobi, during the reign of Caracalla,<sup>104</sup> a larger quantity of Nicaean coinage came into circulation in Upper Moesia.<sup>105</sup> This was most pronounced during the reign of Alexander Severus and at the beginning of the reign of Gordian III. The lack of small bronze coins in circulation in Upper Moesia, which was temporarily compensated for by Nicaean issues, was probably the main reason for the opening of a provincial mint in Viminacium in 239, and later also in Sarmizegetusa in Dacia.<sup>106</sup> This was obviously not the case with the Pannonian provinces, where a small presence of Nicaean coinage was recorded in circulation. From this, the possibility arises that the different picture of incidence of reverse motifs at the Viminacium and Pannonian necropolises was influenced by an exceptionally large presence of Nicaean coinage. This circumstance within the monetary policy, which manifested itself precisely in Upper Moesia, led to the obtained results.

Unlike the necropolis of Više Grobalja, 4<sup>th</sup>-century coin finds at Pećine do not represent a negligible number. Including small or large collective finds, as well as those of one or two coins from graves, a total of 544 specimens from the 4<sup>th</sup> century were recorded (Table 4). Of that number,

103 Војвода, Петровић 2011: 288-290; Војвода, Јесретих 2012: 121-122; Војвода 2013: 159-160; Vojvoda, Mrđić 2015: 15, ref. 13; Војвода, Бранковић 2016: 103-142.

104 Borić-Brešković 2011: 417-418, ref. 34-49.

105 Zanimljivo je da se istovremeno, za vreme Elagabala i posebno Aleksandra Severa i Gordijana III, u Makedoniji ponovo kuju zapažene emisije autonomnog novca (Koinon Makedonije), koje očito, za razliku od novca Nikeje, nisu imale većeg udela u cirkulaciji na teritoriji Gornje Mezi-je u ovo vreme.

106 Борић-Брешковић 1976: 8, н. 2; Црнобрња 1993: 17-19.

104 Borić-Brešković 2011: 417-418, ref. 34-49.

105 Interestingly, at the same time, during Elagabalus and, particularly, Alexander Severus and Gordian III, notable Macedonian issues of autonomous coinage (the Koinon of Macedonia) are again minted, which obviously, unlike the coinage of Nicaea, did not have a larger proportion of the circulation in the territory of Upper Moesia at that time.

106 Борић-Брешковић 1976: 8, н. 2; Црнобрња 1993: 17-19.

ćinama nalazi novca 4. v. ne predstavljaju zane-marljiv broj. Uključujući manje ili veće skupne nalaze kao i jednog ili dva novčića iz grobnih celina, ukupno je registrovano 544 primeraka novca 4. v. (Tabela 4). Od tog broja čak 377 potiče iz 12 ostava, dok 167 predstavljaju nalaze jednog ili dva novčića u grobovima. Ako ovom broju dodamo još 434 primerka novca 4. v. koji su pronađeni u slojevima na nekropoli, dobijamo da je ukupna zastupljenost svih primeraka (ostave iz grobova, ostali grobovi, slojevi) 27,96% od svih obrađenih primeraka sa Pećina. Ako sažmemo nalaze iz ostava i drugih 167 iz grobova, proizilazi da je novac 4. v. daleko zastupljeniji u slojevima na nekropoli nego u grobovima. Iako smo ih, iz pomenutih razloga, isključili iz analize reversnih motiva, njihova brojnost iziskuje našu pažnju u primeru analize reversnih motiva. S obzirom na veliki uzorak, smatramo da istraživačima novca 4. v. može biti od koristi prikaz zastupljenosti reversnih tipova pronađenih na nekropoli Pećine.

Od ukupno obrađenih 978 primeraka novca 4. v. kod 688 (467 iz grobova i 221 iz slojeva) bilo je moguće utvrditi tip reversne predstave, čija zastupljenost je prikazana u Tabeli 16.<sup>107</sup>

Od identifikovanih predstava na Pećinama VOTA tipovi pojavljuju se tokom celog 4. v. dok se predstave Jupitera, *Urbs Roma* i *Constantinopoli* tipovi pojavljuju samo u emisijama Konstantina Velikog. Motivi dve Viktorije koje stoje okrenute jedna prema drugoj, kapija logora i *Gloria exercitus* sa dva i jednom standardom emitovani su u vreme istog izdavača, za njega i njegove sinove. Novčići pronađeni na Pećinama koji pripadaju vremenu vladavne Konstantina Velikog čine 19,05% nalaza u grobovima i 50,68% iz slojeva na nekropoli.<sup>108</sup> Reversni tipovi *Fel temp reparatio* (car na galiji, feniks i pali konjanik), kao i *Spes reipublice* (car drži glob i koplje) emitovani su za vladavine Konstantinovih sinova, za same izdavače, ali i za cezare Konstancija Gala i Julijana II. Čine 38,55% nalaza iz grobova i 26,26% iz slojeva. Motivi *Gloria romanorum* tip (car) i *Securitas reipublicae* tip (Viktorija) pripadaju emisijama Valentinijana I, Valensa, Gracijana i Valentinijana II, a čine 29,55% nalaza iz grobova i 18,09 iz slojeva. Konačno, motiv *Salus reipublicae* tip (Viktorija)

377 originate from 12 hoards, while 167 represent single or two coin finds in graves. If another 434 specimens from the 4<sup>th</sup> century, which were discovered in layers at the necropolis, are added to this number, the overall incidence of all coins (hoards from graves, other graves, layers) accounts for 27.96% of all the processed specimens from Pećine. If the finds from hoards and the other 167 from graves are summarised, it follows that 4<sup>th</sup>-century coins are far more prevalent in layers at the necropolis than in graves. Although they were, for the reasons mentioned, excluded from the analysis of reverse motifs, their number nonetheless demands attention. Given the large sample, it is believed that researchers of 4<sup>th</sup>-century coins may find useful the account of the incidence of reverse types discovered at the necropolis of Pećine.

Of a total of 978 processed coins from the 4<sup>th</sup> century, in 688 (467 from graves and 221 from layers) it was possible to determine the type of reverse depiction, the incidence of which is shown in Table 16.<sup>107</sup>

Among the identified depictions at Pećine, VOTA types appear throughout the entire 4<sup>th</sup> century, while representations of Jupiter, *Urbs Roma* and *Constantinopoli* types occur only in the issues of Constantine the Great. Motifs of two Victories standing facing each other, a camp gate and *Gloria exercitus* with two and one standard were issued at the time of the same issuer, for both himself and his sons. Coins discovered at Pećine that belong to the reign of Constantine the Great account for 19.05% of finds in graves and 50.68% from layers at the necropolis.<sup>108</sup> The reverse types *Fel temp reparatio* (emperor on galley, with phoenix and fallen horseman), as well as *Spes reipublice* (emperor holding globe and spear) were issued during the reign of Constantine's sons, for themselves, but also for Caesars Constantius Gallus and Julian II. They make up 38.55% of finds from graves and 26.26% from layers. The motifs of the *Gloria romanorum* type (emperor) and *Securitas reipublicae* type (Victory) belong to the issues of Valentinian I, Valens, Gratian and Valentinian II, and account for 29.55% of finds from graves and 18.09% from layers. Finally, the motif of the *Salus reipublicae*

107 Analizi reversnih predstava priključen je i mali broj primeraka novca tetrarhije koji potiču sa samog kraja 3. v.

108 Procenti su dobijeni od ukupnog broja novčića sa identifikovanim reversnim motivima.

107 A small number of specimens from the Tetrarchy, which originate from the very end of the 3<sup>rd</sup> century, were also included in the analysis of reverse depictions.

108 The percentages were obtained from the total number of coins with identified reverse motifs.

<b>Reversna predstava/ Reverse motifs</b>	<b>% Grobovi/Graves</b>	<b>% Sloj/Layers</b>
VOTA tip/type	3,65	7,70
Jupiter	2,35	2,71

Tabela 16 – Zastupljenost reversnih tipova 4. v. u grobovima i slojevima.

Table 16 – Percentages of the thematic groups 4th c. reverse motifs from layers.

pripada kovanjima Valentinijana II, Teodosija I i Arkadija i čini 1,50% nalaza iz grobova i 4,07% iz slojeva na nekropoli Pećine.

Na Pećinama je identifikovan i određeni manji broj primeraka novca 5. v. Pripadaju emisijama Teodosija II sa motivima *Gloria romanorum* (car; Teodosije II i Honorije) ili krst u vencu, dok 10 primeraka nije bilo moguće identifikovati. Izvesna nedatovana izdanja Arkadija i Honorija (4 kom. iz grobova i 3 kom. iz slojeva) mogla bi takođe pripadati početku 5. v. Određen broj primeraka novca zbog svoje loše očuvanosti nije bilo moguće determinisati, osim da pripadaju kraju 4. i početku 5. v. (14 kom. iz grobova i 32 iz slojeva).

## ZAKLJUČAK

Na teritoriji koju je obuhvatala rimska provincija Gornja Mezija, u predrimsko vreme sve populacije su gotovo isključivo praktikovale kremaciju kao oblik sahranjivanja. Na viminacijumskim nekropolama Više Grobalja i Pećine od druge polovine 1. v.n.e. do sredine 3. v. praktikovani su istovremeno obredi kremacije i inhumacije. U ranijim studijama definisano je da pojava inhumacije, kao oblika sahranjivanja od 1. v.n.e., nije nastavak starije funeralne prakse, već predstavlja stranu interpolaciju. Prilozi u grobovima oba oblika sahranjivanja na Viminacijumu pokazuju veliku sličnost po karakteru i kvalitetu, što ukazuje na homogenu populaciju po pitanju ekonomskog, socijalnog statusa i nivoa romanizacije. U dosadašnjim studijama grobovi kremiranih pokojnika na Viminacijumu povezivani su sa domorodačkim stanovništvom, dok su inhumacije odraslih individua pripisivane doseljnicima iz istočnih provincija. Prisustvo entiteta iz istočnih delova Carstva evidentirano je u epigrafskom materialu i potvrđeno antropološkim analizama.<sup>109</sup> Međutim, izneta mišljenja po kojima je kod stanovnika Viminacijuma od kraja 1. pa do sredine 3. v. bilo zastupljeno stoičko i neoplatonističko verovanje u zagrobni život,<sup>110</sup> zahtevaju izvesne korekcije u diskusiji koja sledi. Pošto potvrde na kojima se zasniva-

type (Victory) belongs to the coinage of Valentinian II, Theodosius I and Arcadius, and makes up 1.50% of finds from graves and 4.07% from layers at the necropolis of Pećine.

A smaller number of coins from the 5<sup>th</sup> century were also identified at Pećine. They belong to the issues of Theodosius II with motifs of *Gloria romanorum* (emperor; Theodosius II and Honorius) or a cross in a wreath, while 10 specimens could not be identified. Certain undated issues of Arcadius and Honorius (4 coins from graves and 3 coins from layers) could also belong to the beginning of the 5<sup>th</sup> century. A number of specimens, due to their poor state of preservation, could not be determined, except that they belong to the end of the 4<sup>th</sup> and the beginning of the 5<sup>th</sup> century (14 coins from graves and 32 from layers).

## CONCLUSION

In the territory of the Roman province of Upper Moesia, in pre-Roman times, all the populations almost exclusively practised cremation as a form of burial. At the Viminacium necropolises of Više Grobalja and Pećine, from the second half of the 1<sup>st</sup> century AD to the mid-3<sup>rd</sup> century, cremation and inhumation rites were simultaneously practised. In earlier studies, it was defined that the occurrence of inhumation, as a form of burial from the 1<sup>st</sup> century AD, does not signify a continuation of the older funeral practice, but rather a foreign interpolation. Grave goods in both forms of burial at Viminacium exhibit a great resemblance in character and quality, which points to a homogenous population in terms of economic and social status, as well as the degree of Romanisation. In studies thus far, cremation burials at Viminacium have been linked to the indigenous population, whereas inhumations of adults were attributed to the settlers from the eastern provinces. The presence of entities from the eastern parts of the Empire was recorded in epigraphic material and confirmed by anthropological analyses.<sup>109</sup> However, opinions stating that from the late 1<sup>st</sup> to the mid-3<sup>rd</sup> century, among the Viminacium inhabitants, there was a Stoic

110 Зотовић 2000: 11.

109 Јовановић 1984: 128-129; Зотовић 1986: 41-60; 2000: 7-18; Golubović 1998: 251-252; Jovanović 2000: 210-211; Jovanović 2006: 25-29.

ju zaključci u ranijim radovima, između ostalog, nalaze svoje uporište i u nalazima novca. Nakon detaljne obrade nalaza novca sa nekropola Više Grobalja i Pećine jasno je da ovi nalazi ne mogu biti potvrda tim tvrdnjama.

Smrt i sahranjivanje predstavljaju jedan od rituala tranzicije. Smrt izmešta, kako umrlag, tako i članove porodice iz njihovih uobičajenih društvenih uloga. Pokojnik je napustio svet živih ali telo je još uvek prisutno. Istovremeno ožalošćeni su delom izolovani, često obeleženi (npr. odećom) i isključeni iz punog učešća u zajednici. Sahrane su služile, sa jedne strane, za reintegraciju živih i za odvajanje mrtvih iz sveta živih.<sup>111</sup> Od shvatanja prirode tela i duše, kao i njihovog statusa nakon smrti, zavisi da li će isto biti kremirano ili inhumirano. Obe prakse odazivaju se na realnost koju predstavlja mrtvo telo, ali radikalno različitim pristupima. Dihotomija između kremacije i inhumacije predstavlja suštinski konflikt između želje da se telo sačuva i želje za transformacijom. Preklapanje oba rituala sahranjivanja, kremacije i inhumacije, od početka 2. v. do sredine ili druge polovine 3. v. potvrđeno je istraživanjima nekropola širom Carstva.<sup>112</sup> Ova promena u ritualu sahranjivanja započeta je u Italiji početkom 2. v. a ubrzo se raširila i u provincije.<sup>113</sup>

Verovanja Rimljana o zagrobnom životu bila su raznolika a istraživanja nekropola širom nekadašnjeg Carstva pružaju nam izvesne smernice za zaključivanja. Ali i dalje je veoma teško proceniti u kojoj meri i u šta su ljudi verovali, kako su se razvijala i menjala verovanja kroz vreme,

111 Hope 2007: 85.

112 Jones 1982: 190; Cooke 1998: 206-219; Blaizot et al. 2007: 306; Pearce 2008: 30.

113 Preklapanje rituala kremacije i inhumacije tumači se postepenim prelaskom na drugu praksu sahranjivanja. U traženju objašnjenja za ovu promenu, nije se mnogo odmaklo od Nokovog (Nock) tumačenja iz 1932. g. Po njemu, rane inhumacije sa početka 2. v. ne stoje u vezi sa mističnim kultovima ili hrišćanstvom, niti sa nekom opštom promenom u verovanju u zagrobni život. Međutim, u traženju objašnjenja Nok iznosi nejasnu ideju da je promena prouzrokovana modnim hirovima više klase i njihovom mogućnošću da pokazuju bahatost sahranjivanjem u sarkofazima; cf. Nock 1932: 350-357; Jones 1982: 191. Najranije inhumacije u Rimu bile su bogatih članova društva, tako da su troškovi goriva za kremacije kao glavni razlog prelaska na inhumaciju, odbačeni. Pojava sarkofaga potvrđena je u provincijalnim prestonicama u drugoj četvrtini 2. v.; cf. Jones 1982: 194.

and Neoplatonic belief in the afterlife<sup>110</sup> require certain corrections in the discussion that follows, as the confirmations on which the conclusions in earlier works are based, among other things, are corroborated by coin finds. After detailed analysis of coin finds from the necropolises of Više Grobalja and Pećine, it is clear that the findings cannot confirm these assertions.

The notion of death and burial relate to transition. Death relocates both the deceased as well as family members from their usual social roles. The deceased has left the world of the living but the body is still present. At the same time, the bereaved are partly isolated, often marked (e.g. by clothing) and excluded from full involvement in the community. Funerals served, on the one hand, for the reintegration of the living and for the separation of the dead from the world of the living.<sup>111</sup> Whether the body will be cremated or inhumed depends on the understanding of the nature of the body and soul, as well as their status after death. Both practices respond to the reality of a dead body, but with radically different approaches. The dichotomy between cremation and inhumation is an essential conflict between the desire to preserve the body and the desire for transformation. The overlapping of the two burial rituals, cremation and inhumation, from the early 2<sup>nd</sup> to the middle or the second half of the 3<sup>rd</sup> century has been confirmed by investigations of necropolises throughout the Empire.<sup>112</sup> This change in the burial ritual began in Italy at the beginning of the 2<sup>nd</sup> century and soon spread to the provinces.<sup>113</sup>

112 Jones 1982: 190; Cooke 1998: 206-219; Blaizot et al. 2007: 306; Pearce 2008: 30.

113 The overlapping of cremation and inhumation rituals is interpreted as a gradual transition to the latter burial practice. In seeking an explanation for this change, little progress has been made since Nock's interpretation from 1932. According to him, early inhumations from the beginning of the 2<sup>nd</sup> century are not connected with mystery cults or Christianity, nor with any general change in the belief in the afterlife. However, seeking an explanation, Nock states a vague idea that the change was caused by a whimsical trend of the upper class and their ability to demonstrate extravagance with burials in sarcophagi; cf. Nock 1932: 350-357; Jones 1982: 191. The earliest inhumations in Rome were those of wealthy members of society, so the cost of fuel for cremation as the main reason for the transition to inhumation.

-----  
 poštujući i određene uočene razlike koje variraju u različitim delovima Carstva.<sup>114</sup> Kako god, veza između živih i mrtvih je postojala. Umrli je bio tretiran sa poštovanjem i morao je biti sahranjen pravilno. Idealno mrtvi su trebali da budu poštovani od živih koji su izražavali zahvale precima.

Osnovno pitanje bilo je šta se dešava sa dušom nakon smrti? Da li je duša besmrtna ili ne? Različiti filozofski pravci pružali su objašnjenja koja su se kretala od toga da smrt predstavlja potpuno uništenje i da nakon nje ne postoji ništa, preko mišljenja da duša ima ciklične reinkarnacije, do toga da je duša besmrtna ili da se uzdiže

114 Novija istraživanja naglašavaju regionalne različitosti u pogrebnim ritualima, ali sa druge strane potvrđuju i neke zajedničke činitelje: način sahranjivanja (kremacije i inhumacije), paralelno postojanje oba rituala, postepeni prelaz na inhumaciju, sahranjivanje van gradskih bedema, itd.; cf. Hope 2007: 129.

Roman beliefs about the afterlife were diverse and investigations of necropolises across the former Empire provide some guidelines on which to base conclusions. However, it is still very difficult to assess what and to what extent people believed in, as well as how their beliefs were developing and changing through time, bearing in mind some perceived distinctions that vary in different parts of the Empire.<sup>114</sup> Nevertheless, the connection between the living and the dead existed. The deceased was treated with respect and had to be buried appropriately. The idealised dead were to be respected by the living who expressed their gratitude to their ancestors.

The basic questions related to what was happening to the soul after death and whether the soul was immortal or not. Different philosophies provided explanations that ranged from the notion that death represents total annihilation and that there is nothing after it, through the belief that the soul has cyclical reincarnations, to the idea that the soul is immortal or rises to heaven and unites with the divine.<sup>115</sup> However, the nature, location and duration of the soul's new life, in those philosophies that believed in its release after death, were often only vaguely defined. Generally, the fate of the soul was secondary, while it was primary how a belief in the soul and its survival (or not) influenced the way people lived their lives.<sup>116</sup>

Traditionally, the path of the soul after death leads to Hades/Pluto and his underground kingdom. Souls of the dead had emotions and either enjoyed or suffered based on the kind of life they had led. It is very difficult to estimate today how many people believed in Hades or reward and punishment after death. The circumstances of each individual life could have influenced beliefs about the afterlife: education, social and property status, regional origin, as well as the period. Cumont was of the opinion that beliefs in the afterlife became increasingly more common during the 2<sup>nd</sup> century,

tion was dismissed. The appearance of sarcophagi was confirmed in provincial capitals in the second quarter of the 2<sup>nd</sup> century; cf. Jones 1982: 194.

114 More recent research highlights regional differences in funerary rituals, but also confirms some similarities: forms of burial (cremation and inhumation), parallel existence of both rituals, gradual transition to inhumation, burials outside the city walls, etc.; cf. Hope 2007: 129.

115 Cumont 1922: 4-40.

116 Hope 2007: 214.

na nebo i sjedinjuje sa božanskim.<sup>115</sup> No, priroda, lokacija i trajanje novog života duše, u primerima filozofskih pravaca koji su verovali u njeno oslobađanje nakon smrti, često su bili slabo definisani. Najčešće je sudbina duše bila sekundarna, a primarno je bilo kako verovanje u dušu i njeno preživljavanje (ili ne) utiče na to kako su ljudi živeli svoje živote.<sup>116</sup>

Tradicionalno put duše nakon smrti vodi do Hada/Putona i njegovog podzemnog kraljevstva. Duše umrlih imale su emocije i uživale ili patile prema tome kakav su život vodile za života. Veoma je teško proceniti danas koliko je ljudi verovalo u Hada ili nagrade i kažnjavanja nakon smrti. Okolnosti svakog pojedinog života mogle su uticati na verovanja o zagrobnom životu: obrazovanje, društveni i imovinski status, regionano poreklo, kao i trenutno vremensko razdoblje. Kimon (Cumont) je smatrao da verovanja u zagrobni život postaju sve više uobičajena tokom 2. v. što je, po njemu, povezano sa sve težim životnim uslovima ljudi.<sup>117</sup> Narastajući uticaj mističnih kultova mogao bi podržati tvrdnju Kimona (Cumont) o povećanoj želji za traženjem spiritualnosti.<sup>118</sup>

U pokušaju da delom rasvetlimo prirodu pogrebnih običaja koji su primenjivani na viminacijumskim nekropolama, prvenstveno sa stanovišta upotrebe novca, neophodno je dodati komentar o poznatim verovanjima u zagrobni život. Prema najstarijem verovanju grob je predstavljao večnu kuću pokojnika (*domus aeterna*). Umrli zadržava sve potrebe i osećanja koje je imao za života, a duše se ne mogu osloboditi svoje telesnosti. Prema tome, bilo je neophodno pokojniku obezbediti ne samo »krov nad glavom« već i sve druge potrepštine koje je imao i za života (odeću, nakit, posude, hranu i piće, lampe, pribor za toaletu, igračke, amulete, itd.). Rituali obavljani na daćama proizilaze iz ovog verovanja, sa jedne strane iz pijeteta prema pokojniku, ali i iz straha zbog njegove moguće osvete i proganjanja živih. Potom se, pod uticajem platonističke i stoičke filozofske misli, širi novo verovanje po kojem se duša oslobađa tela nakon smrti, ali grob ostaje mesto komunikacije pokojnika i živih. U Carstvu su ove ideje dalje razvijali i širili neoplatonisti i

which he associated with ever more difficult living conditions.<sup>117</sup> The growing influence of mystery cults could support Cumont's assertion about the increased desire for seeking spirituality.<sup>118</sup>

In an attempt to illuminate to a degree the nature of funerary customs that were practised at the Viminacium necropolises, primarily from the aspect of the use of coins, it is necessary to add a comment about the known beliefs in the afterlife. According to the oldest belief, the grave represented the eternal house of the deceased (*domus aeterna*). The deceased retains all the needs and feelings that he had during life, and the soul cannot break free from their physical state. Accordingly, it was required to provide not only a "roof over the head", but also all the other necessities that the deceased had had during his lifetime (clothes, jewellery, vessels, food and drink, lamps, toiletries, toys, amulets, etc.). Rituals performed during commemorative repasts stem from this belief, on the one hand, out of reverence for the deceased, but also for fear of his possible vengeance and persecution of the living. Then, under the influence of Platonic and Stoic philosophical thought, a new belief spread based on which the soul is freed from the body after death, but the grave remains the place of communication between the deceased and the living. In the Empire, these ideas were further developed and disseminated by Neoplatonists and members of the third Stoic.<sup>119</sup> Roman beliefs in the afterlife were also influenced by various mystery cults: the Thracian cult of Dionysos and Sabazios, Cybele and Attis, Isis and Serapis, which presented immortality as dwelling in the kingdom of Hades. A completely different doctrine was propagated by Syrian cults and the Persian cult of Mithras, which started spreading westward from the 1<sup>st</sup> century AD. According to them, after death, the soul does not go under the ground, but is elevated to heaven, where it enjoys divine bliss among the stars in the eternal light.<sup>120</sup>

At the Viminacium necropolises of Više Grobalja and Pećine, cremation and inhumation rituals were simultaneously practised from the 1<sup>st</sup> to the mid-3<sup>rd</sup> century. The largest number of cremation burial pits are of the Mala Kopašnica –

prispadnici treće stoe.<sup>119</sup> Na verovanja u zagrobni život Rimljana imali su uticaja i različiti mistični kultovi: Trako-frigijski Dionisa i Sabazija, Kibele i Atisa, Izide i Serapisa, koji su predstavljali besmrtnost kao boravak u Hadovom kraljevstvu. Dok su sasvim drugačiju doktrinu propagirali sirijski kultovi i persijski kult Mitre, koji su se počeli širiti na zapad počev od 1. v.n.e. Prema njima duša ne odlazi nakon smrti pod zemlju, već se uzdiže na nebo, gde uživa u božanskoj blažnosti među zvezdama u večnoj svetlosti.<sup>120</sup>

Na viminacijumskim nekropolama Više Grobalja i Pećine istovremeno su upražnjavani rituali kremacije i inhumacije od 1. do sredine 3. v. Najveći broj grobnih raka kremiranih pokojnika predstavljaju tipovi Mala Kopašnica – Sase, koje po veličini odgovaraju rakama za inhumaciju.<sup>121</sup> Prilozi u grobovima kremiranih i inhumiranih pokojnika na Viminacijumu, pokazuju njihovu veliku sličnost po karakteru i kvalitetu. Što ukazuje na manje ili više homogenu populaciju po pitanju ekonomskog i socijalnog statusa, kao i nivoa romanizacije. Iznad grobnih humki obe vrste rituala formirane su pojedinačne ili zajedničke kuline gde je pripremana hrana i vršena žrtvovanja tokom redovnih daća. Pojedine žrtvene površine pokrivala su kako grobove kremiranih, tako i inhumiranih pokojnika. Iz svega se da zaključiti da su bez obzira na različit vid sahrane, rituali tokom sahrane i kasnije tokom daća, bili uglavnom isti.<sup>122</sup> Pored ovih opštih sličnosti, na južnim nekropolama Viminacijuma registrovani su elementi različitih mističnih i istočnjačkih kultova: mitraizama, kulta Lunarne boginje/Podunavskih konjanika, Dionisa i Sabazija, kao i Kibele i Atisa. Brojne olovne, kamene ili keramičke ikone, predstave na utilitarnim predmetima, plastika, epigrafski spomenici svedoče o izvesnoj popularnosti ovih kultova u Viminacijumu.<sup>123</sup> U svakom slučaju, najveći broj kremacija i inhumacija, kako na nekropoli Više Grobalja

Sase type, and correspond in size to inhumation pits.<sup>121</sup> Grave goods in cremation and inhumation burials at Viminacium exhibit a great resemblance in character and quality, which points to a more or less homogenous population in terms of economic and social status, as well as the degree of Romanisation. Above the burial mounds of both types, individual or common *culinae* were formed, where food was prepared and sacrifices performed during regular commemorative repasts. Some sacrificial areas covered the graves of both cremated and inhumed deceased. From all this it can be concluded that regardless of different forms of burial, rituals during the funeral and, later, during repasts, were mostly the same.<sup>122</sup> In addition to these general similarities, at the southern necropolises of Viminacium, there were elements of various mystery and oriental cults: Mithraism, the cult of the Lunar goddess/Danubian horsemen, Dionysos and Sabazios, as well as Cybele and Attis. Numerous lead, stone or ceramic icons, depictions on utilitarian objects, sculptures and epigraphic monuments testify to a certain popularity of these cults at Viminacium.<sup>123</sup> However, the largest number of cremations and inhumations, at both the necropolis of Više Grobalja as well as at Pećine, do not contain these elements.

Here again the question is raised as to which of the beliefs in the afterlife prevailed among the inhabitants of Viminacium from the end of the 1<sup>st</sup> to the mid-3<sup>rd</sup> century – the older, according to which the grave was considered a *domus aeterna*, or the younger, Neoplatonic. Based on the detailed analysis of coin finds from graves at the necropolises of Više Grobalja and Pećine, it can be stated that the numismatic finds certainly cannot be an argument in support of the assertion that the younger understanding of the afterlife was adopted at Viminacium.<sup>124</sup> Of a total of

119 Cumont 1922: 39, 41.

120 Cumont 1922: 35-37; Toybnbee 1971: 34-39.

121 Mnogo rede slučajeve predstavljaju sahrane u urnama; cf. Зотовић 2000: 8. Grobovi tipa Mala Kopašnica – Sase čine nešto preko 90% svih kremacija na Viminacijumu; cf. Golubović, Korać 2008: 111.

122 Зотовић 1986: 43. Ove činjenice odnose se na vreme preklapanja dva rituala sahranjivanja.

123 Зотовић 1991: 198-201; Зотовић 1997: 411-415; Зотовић 1999: 63-75; Спасић-Ђурић 2015: 95-109.

121 Much rarer are cases of burials in urns; cf. Зотовић 2000: 8. Graves of the Mala Kopašnica – Sase type account for just over 90% of all cremations at Viminacium; cf. Golubović, Korać 2008: 111.

122 Зотовић 1986: 43. These facts relate to the time of the overlapping of the two burial rituals.

123 Зотовић 1991: 198-201; Зотовић 1997: 411-415; Зотовић 1999: 63-75; Спасић-Ђурић 2015: 95-109.

124 The only two arguments that the younger understanding of the afterlife was accepted are the compulsory (sic!) presence of coins and oil lamps in inhumation and cremation

tako i na Pećinama, ne sadrži ove elemente.

Ovde se vraćamo pitanju koje je od verovanja u zagrobni život bilo zastupljeno kod stanovnika Viminacijuma od kraja 1. pa do sredine 3. v. – starije po kojem je grob smatran za *domus aeterna* ili mlađe neoplatonističko? Na osnovu detaljne analize nalaza novca iz grobnih celina sa nekropole Više Grobalja i Pećine, možemo tvrditi da numizmatički nalazi svakako ne mogu biti argument u prilog tvrdnji da je na Viminacijumu prihvaćeno mlađe shvatanje zagrobnog života.<sup>124</sup> Od ukupno 3987 grobova inhumiranih i kremiranih pokojnika na nekropoli Više Grobalja, njih 1346 sadržavalo je novac kao prilog, što iznosi 33,74%.<sup>125</sup> Na nekropoli Pećine ovaj procenat je daleko manji i iznosi samo 19,13% (od 6779 grobova u 1297 je konstatovan novac kao prilog.<sup>126</sup> Na sadašnjem nivou obrađenosti grobnih celina sa obe nekropole,<sup>127</sup> smatramo nemogućim donošenje definitivnih zaključaka o verovanjima u zagrobni život stanovnika Viminacijuma. Sintezom koja bi obuhvatila analizu svih otkrivenih grobnih celina i žrtvenih površina nastalih iznad grobova, približili bi se donošenju sigurnijih zaključaka u pogledu verovanja u zagrobni život. Ovome svakako doprinose studije pojedinih vrsta priloga iz grobnih celina koje su do sada publikovane,<sup>128</sup> ali one pružaju samo

3,987 inhumation and cremation burials at the Više Grobalja necropolis, 1,346 contained coins as grave goods, which amounts to 33.74%.<sup>125</sup> At the necropolis of Pećine, this percentage is far smaller and amounts to only 19.22% (of 6,779 graves, coins were recorded in the inventory of 1,303 graves).<sup>126</sup> At the current level of processing of graves from both necropolises,<sup>127</sup> it is impossible to draw definitive conclusions about the beliefs in the afterlife of the Viminacium inhabitants. Using a synthesis that would include the analysis of all discovered graves and sacrificial areas formed above graves, safer conclusions could be reached regarding the belief in the afterlife. Studies about certain types of grave inventories that have been published so far definitely contribute to this,<sup>128</sup> but they provide only partial arguments for conclusions.

The analysis of coins draws the attention back to the issue of their role during the funeral ceremony and, later, during regular commemorative repasts at the two Viminacium necropolises. Greek and Latin sources from the 5<sup>th</sup> century BC to the 2<sup>nd</sup> century AD, regardless of certain differences in their accounts, make reference to the custom of placing a single low-value coin into the mouth of the deceased, immediately after death, as a tax for their transportation across the Acheron or Styx to the underworld.<sup>129</sup> The custom

124 Kao jedina dva argumenta, da je prihvaćeno mlađe shvatanje zagrobnog života, navodi se obavezno (sic!) prisustvo novca i žičaka u grobovima inhumiranih i kremiranih pokojnika; cf. Зотовић 2000: 11.

125 Cf. Vojvoda, Mrđić 2015: 12, Tabela 3.

126 Cf. Tabela 3. Žičci takođe nisu predstavljali obavezan prilog u grobovima. U dokumentaciji Narodnog muzeja u Požarevcu zabeleženo je 2157 inventarisanih primeraka žičaka i 1238 onih koji su u studijskom materialu, što ukupno iznosi 3395 primeraka. Podaci se odnose na nalaze sa obe nekropole i kao što je iz ukupnog broja otkrivenih grobova jasno, broj žičaka je daleko manji. Na ustupljenoj informaciji se ljubazno zahvaljujemo kolegici Spasić-Đurić.

127 Do sada su publikovane grobne celine sa nekropole Više Grobalja i to: grobovi inhumiranih pokojnika G – od no. 1 do 267 i dodatnih 21 G ispod kuline; cf. Зотовић, Јордовић 1990: 16, ref. 12; Katalog 55-74; Grobovi kremiranih pokojnika G1 – od no. 1 do 280 i dodatnih 8 ispod kuline; cf. Зотовић, Јордовић 1990: 16, ref. 13; Katalog 77-110; G – od no. 268 do 550 i G1 – od no. 281 do 530; cf. Korać, Golubović 2009: 25-438.

128 Korać 1996; Korać 2007; Redžić 2007; Golubović 2008; Korać, Mikić 2014, Vojvoda, Mrđić 2015.

graves; cf. Зотовић 2000: 11.

125 Cf. Vojvoda, Mrđić 2015: 12, Table 3.

126 Cf. Table 3. Oil lamps also did not represent a compulsory component of grave inventories. In the documentation of the National Museum in Požarevac, there are 2,157 inventoried oil lamps and 1,238 of those classified as study material, a total of 3,395 specimens. The data refers to finds from both necropolises and, as can be seen from the total number of discovered graves, the number of oil lamps is far smaller. Kind thanks are due to our colleague D. Spasić-Đurić for the information provided.

127 The following graves from the necropolis of Više Grobalja have been published to date: inhumation graves G – from no. 1 to 267 and an additional 21 G below the *culina*; cf. Зотовић, Јордовић 1990: 16, ref. 12; Catalogue 55-74; cremation graves G1 – from no. 1 to 280 and an additional 8 below the *culina*; cf. Зотовић, Јордовић 1990: 16, ref. 13; Catalogue 77-110; G – from no. 268 to 550 and G1 – from no. 281 to 530; cf. Korać, Golubović 2009: 25-438.

129 Stivens 1991: 215.

parcijalne argumente za zaključivanja.

Analiza novca vraća nas pitanju njegove uloge tokom pogrebne ceremonije i kasnije prilikom redovnih daća na dve viminacijumske nekropole. Grčki i latinski izvori od 5. v.s.e. do 2. v.n.e. nezavisno od izvesnih razlika u izlaganjima, pominju običaj stavljanja jednog novca niske vrednosti u usta pokojnika odmah po smrti kao taksu za prevoz preko Aherona ili Stiksa u podzemlje.<sup>129</sup> Običaj potiče od verovanja u neophodnost plaćanja Haronu za prelazak u svet mrtvih. Inicijalno iz mediteranskog kulturnog kruga, proširio se u vreme rimskog carstva i na severo-zapadne provincije.<sup>130</sup> Neophodnost da se tzv. »Haronov obol« stavi u usta pokojnika, sa namerom da dotakne dušu, blisko je povezano sa vremenom stavljanja novčića. Stavljan je u vreme smrti kada se verovalo da duša započinje svoje putovanje na drugi svet. Ova činjenica je ključna za shvatanje običaja, jer čini stavljanje novčića ritualom prelaza, zatvaranjem prolaza između živih i mrtvih, pre nego praksom u sahranjivanju.<sup>131</sup> Nalazi novca na brojnim istraženim nekropolama širom Carstva, pa i viminacijumskim, potvrđuju povremenu upotrebu nominala male vrednosti u funeralnoj praksi. Iznenadjujuć je nesklad između izveštaja antičkih izvora i činjenica da samo mali broj grobova sadrži novac, da se pojavljuje i više novčića, te da su postavljani na različite delove tela ili oko njega.

Kao što je pomenuto, tek kod približno trećine grobova na nekropoli Više Grobalja registrovan je novac kao prilog, dok je na Pećinama ovaj procenat daleko niži (19,22%). Kod ove petine grobova, je u najvećem procentu (86,42% u G i 86,61% u G1) registrovano prisustvo jednog primerka novca male vrednosti.<sup>132</sup> Veliko odstupanje u odnosu na tvrdnje antičkih izvora, ogleda se i u pogledu mesta nalaza novca u okviru grobnih celina inhumiranih pokojnika. Samo 24,20% novčića bilo je položeno u usta pokojnika, dok je dodatnih 15,35% vezano za predeo glave ili oko glave. Ostali novac (60,45%) nalažen je na različitim mestima, najčešće na torzou, karlici, ali i oko ruku i nogu.<sup>133</sup> U grobovima sa dva novčića

originates from the belief that it was necessary to pay Charon for the transition to the world of the dead. Initially from the Mediterranean cultural circle, at the time of the Roman Empire it spread to the north-western provinces.<sup>130</sup> The necessity to place the so-called "Charon's obol" into the mouth of the deceased, with the intention for it to touch the soul, closely relates to the time of placing the coin. It was inserted at the time of death, when, as it was believed, the soul began its journey to the other world. This fact is crucial for understanding the custom, as the placement of the coin signifies the ritual of transition, closing the passage between the living and the dead, rather than the practice during the burial.<sup>131</sup> Coin finds from numerous investigated necropolises across the Empire, including those of Viminacium, confirm the occasional use of low-value denominations in funerary practice. What surprises is the discrepancy between the reports from ancient sources and the facts that only a small number of graves contain coins, that sometimes a number of coins occur and that they were placed on different parts of the body or around it.

As already noted, only about a third of graves at the necropolis of Više Grobalja contained coins in their inventory, whereas at Pećine this percentage is much lower (19.22%). Among this fifth of graves, a single low-value coin was recorded in the largest percentage of graves (86.42% in G and 86.61% in G1).<sup>132</sup> A large discrepancy in relation to the ancient sources is also reflected in the location of the coin finds within inhumation burials. Only 24.20% of coins were placed in the mouth of the deceased, while an additional 15.35% related to the region of the head or around the head. Other coins (60.45%) were discovered in different places, most frequently on the torso and pelvis, but also around the arms and legs.<sup>133</sup> In graves with two coins in their inventory (7.98%), different combinations of placement were noted, with the largest percentage recorded in the mouth and around the head (positions A and B, 38.80%). In graves with three coins, they were most commonly laid on

Graph 11 – Presence of the imperial and provincial coinage from layers, according to emperors 1-3 c.

kao prilogom (7,98%), zabeležene su različite kombinacije postavljanja, s tim što su u najvećem procentu zabeleženi položaji u ustima i oko glave (A i B 38,80%). U primeru tri novčića u grobu oni su najčešće bili položeni na torzo ili karlicu.<sup>134</sup> Dok su kod pokojnika sa četiri ili pet novčića oni nalaženi uglavnom u predelu nogu i to svi na istom mestu. Kod grobova koji su sadržavali mini depoe ili ostave novca one su u najvećem broju primera, kod kojih je mesto bilo moguće odrediti, nalaženi oko glave pokojnika, potom na torzou i pored desne noge i u jednom primeru na karlici.<sup>135</sup>

Na osnovu izloženog možemo zaključiti da je običaj stavljanja novca u grob bio poštovan samo od dela populacije, što je potvrđeno na obe viminacijumske nekropole. Međutim, u okviru nepune petine grobova na Pećinama koja je sadržavala novac, može se reći da je u najvećem procentu poštovan običaj stavljanja novca u usta pokojnika naročito u primeru grobova sa jednim novcem. Kod grobova sa dva novčića kao priložima, ponovo je najbolje zastupljen položaj jednog od novčića u ustima pokojnika, dok su ostali nalaženi u skoro svim ostalim položajima. Izuzetak predstavlja jedan grob gde su oba novčića postavljena u usta pokojnika, što je jedini zabeleženi primer na nekropolama Više Grobalja i Pećine.<sup>136</sup> S obzirom da su nalazi jednog i dva novčića u grobovima na Pećinama u najvećem broju vezani za položaj u ustima ili glave, što nije slučaj sa tri, četiri ili više novčića, možemo pomisliti da je u primeru prvih predstavljao »kartu u jednom pravcu« za putovanje u carstvo mrtvih. Moguća je i interpretacija koja se pojavljuje u antčkim izvorima 1. v.n.e. da »Haronov obol« simbolizuje jednakost ljudi u smrti, i nadalje razvija ideju da je *pars pro toto* pokojnikovog blagostanja za života.<sup>137</sup> Dva novčića u grobu mogu da asociiraju na putovanje duše sa ovog sveta i njeno ponovno rađanje u sledećem. Poput Psihinog putovanja u podzemlje kojoj je za odlazak (smrt) i povratak (vaskrsnuće) nužno potrebno dva novčića za Harona i dva mamca za Kerbera. Dok u primeru više novčića u grobu, možemo govoriti o novcu namenjenom za »troškove« na

the torso or pelvis.<sup>134</sup> In the case of four or five coins, they were mainly noted in the region of the legs, all in the same place. In graves that contained small or large coin hoards, in which their position could be determined, they were, in most cases, noted around the head of the deceased, then on the torso and next to the right leg, and, in one case, on the pelvis.<sup>135</sup>

Based on the above, it can be concluded that the custom of placing coins in the grave was respected by only a part of the population, something which has been confirmed at both Viminacium necropolises. However, among less than a fifth of graves at Pećine that contained coins, it can be said that the custom of placing coins in the mouth of the deceased was honoured in the largest percentage of cases, particularly in graves with a single coin. In graves with two coins in the inventory, again the most prevalent position of one of the coins is in the mouth, while the others were discovered in almost all the other positions. The exception is a grave where both coins were placed in the mouth, which is the only recorded case at the necropolises of Više Grobalja and Pećine.<sup>136</sup> Considering that the majority of one and two coin finds in graves at Pećine relate to the position of the mouth or the head, which is not the case with three, four or more coins, one can think that in the example of the first ones it represented a "one-way ticket" for travelling to the realm of the dead. Another possible interpretation, which appears in ancient sources from the 1<sup>st</sup> century AD, is that "Charon's obol" symbolises the equality of people in death, and further develops the idea of it being a *pars pro toto* of the deceased's well-being in their lifetime.<sup>137</sup> Two coins in the grave can be associated with the departure of the soul from this world and its rebirth in the next, similar to Psyche's journey to the underworld, who, for the departure (death) and return (resurrection), needs two coins for Charon and two offerings for Cerberus. On the other hand, in the case of more coins in the grave, they could be considered as coins intended for "expenses" for the journey to the other world (*viaticum*), such as a *marsupium* or *crumina*. Coin hoards in 4<sup>th</sup>-century graves, as

134 Cf. Tabela 7-8.

135 Cf. Tabela 9.

136 Cf. *supra* ref. 35.

137 Borza 1955: 142; Stivens 1991: 220; Gázdac-Alföldy, Gázdac 2013: 296.

134 Cf. Tables 7 and 8.

135 Cf. Table 9.

136 Cf. *supra* ref. 35.

137 Borza 1955: 142; Stivens 1991: 220; Gázdac-Alföldy, Gázdac 2013: 296.

putovanju u drugi svet (*viaticum*) kao što bi bili *marsupium* ili *crumina*. Ostave novca u grobovima 4. v. kao što to potvrđuju i nalazi sa drugih analognih nekropola, izgleda da predstavljaju pre potvrdu pokojnikovog društvenog statusa i prestiža nego taksu za Harona.<sup>138</sup> Ali šta reći za približno 80% grobova na nekropoli Pećine koji ne sadrže novac kao prilog? Potrebno je ponovo naglasiti da je običaj bio čvršće ukorenjen u delu populacije koji je praktikovao kremaciju.<sup>139</sup> Najveći deo populacije Viminacijuma praktikovao je iste načine sahranjivanja (kremaciju i inhumaciju, sa postepenim prelaskom na drugi vid sahranjivanja) ali ne i običaj stavljanja novca u grob. Već je napomenuto da su prilozi u grobovima pokazuju njihovu veliku sličnost po karakteru i kvalitetu, ali u kojoj meri su pojedine vrste priloga realno zastupljene, možemo saznati tek nakon detaljne obrade svake pojedinačne grobne celine i njihovim međusobnim poređenjem. Na primeru nalaza novca, već se je pokazalo da paušalni uvid u nalaze sa nekropola Viminacijuma može dovesti do izvođenja pogrešnih zaključaka i nehotičnog zloupotrebljavanja istorijskih izvora.

Nalazi novca sa žrtvenih površina na nekropolama Više Grobalja i Pećine otvaraju još jedno pitanje funeralne upotrebe novca prilikom redovnih daća. Ne može se zanemariti činjenica da je približno isti broj novčića na Pećinama pronađen u grobovima (1929) i u slojevima na nekropoli, koji uglavnom predstavljaju nalaze sa žrtvenih površina iznad grobova (1936).<sup>140</sup> Ova pojava upućuje na postojanje raznolikosti u funeralnoj upotrebi novca: grobovi koji su imali novac kao prilog prilikom sahrane, isti takvi koji su imali i sopstvenu ili zajedničku žrtvenu površinu iznad sa novcem, ili grobovi koji nisu imali novac kao prilog, a imaju ga iznad, priloženog kasnije prilikom daća na žrtvenoj površini. Ovo su neke od najčešćih pojava, pored toga, treba imati u vidu i situacije sa više novčića u grobu, ili na žrtvenoj površini. Postoje i slučajevi u kojima je iznad više grobova (2-3 ili čak 60 u slučaju kulina) formirana žrtvena površina, te je u ovim situacijama teško odrediti kojim grobovima pripadaju određeni

corroborated by finds from other analogous necropolises, appear to be more of a confirmation of the deceased's social status and prestige, rather than a tax for Charon.<sup>138</sup> However, what can be concluded from about 80% of graves at the necropolis of Pećine that do not contain coins in their inventory? It is necessary to re-emphasise that the custom was more firmly rooted in the part of the population that practised cremation.<sup>139</sup> The largest portion of the population at Viminacium practised both forms of burial (cremation and inhumation, with a gradual transition to the latter), but not the custom of placing coins in the grave. It has already been noted that the inventories of graves exhibit a great resemblance in character and quality, but to what extent certain types of grave goods are actually present can only be known after a detailed analysis of each individual grave and their mutual comparison. With the example of coin finds, it has already been shown that a generic observation of the finds from the necropolises of Viminacium can lead to wrong conclusions and an inadvertent misinterpretation of historical sources.

Coin finds from the sacrificial surfaces at the necropolises of Više Grobalja and Pećine raise another question regarding the funerary use of coins during the regular commemorative repasts. It cannot be disregarded that, at Pećine, approximately the same number of coins were discovered in graves (1,929) as in layers at the necropolis, which consist mainly of finds from sacrificial surfaces above the graves (1,936).<sup>140</sup> This suggests the existence of a diversity in the funerary use of coins: graves which contained coins in their inventory deposited during the funeral, the same again but which also had a personal or shared sacrificial surface above with coins in it, or graves with no coins in their inventory, but with some coins above the grave that were subsequently deposited on the sacrificial surface during repasts. These are some of the most common occurrences, in addition to which, the situations with more coins in the grave or on the sacrificial surface should also be considered. There are instances where above several

138 Cf. *supra* ref. 38.

139 Cf. Tabela 3.

140 Cf. Tabela 2. Gotovo identični odnosi zabeleženi su i na nekropoli Više Grobalja: 1595 primeraka novca pronađeno je u grobovima i 1538 u sloju na nekropoli; cf. Vojvoda, Mrđić 2015: 11, Tabela 2.

138 Cf. *supra* ref. 38.

139 Cf. Table 3.

140 Cf. Table 2. Almost identical ratios were noted at the necropolis of Više Grobalja: 1,595 coins were discovered in graves and 1,538 in layers at the necropolis; cf. Vojvoda, Mrđić 2015: 11, Table 2.

novci sa žrtvene površine. Ove žrtvene površine korišćene su tokom dužeg vremenskog perioda (100-150 godina) a sa obzirom na debljinu slojeva istraživanih kulina. Ako se uzmu u obzir svi državni praznici posvećeni mrtvima, kao i privatni, dolazimo do pretpostavke da su članovi porodice umrlog najmanje 6 do 7 puta godišnje posećivali grob i obavljali propisane rituale.<sup>141</sup> U tim prilikama korišćen je i novac, ali u kojim daćama su ga koristili i u kojoj meri, ostaje nam nejasno.

Ako posmatrano carsko i provincijalno kovanje u nalazima iz grobova, očita je najveća zastupljenost novca 2. v. Osetno odstupanje ogleda se u zastupljenosti carskog kovanja u odnosu na provincijalno u rasponu od Karakale do Trebonijana Gal, kada se carski primerici pojavljuju sasvim sporadično (Grafikon 10). Slične rezultate dobili smo i za nalaze novca iz slojeva, s tim što je zabeležena nešto veća prisutnost carskog novca tokom prve polovine 3. v. u odnosu na nalaze iz grobova (Grafikon 11). Dobijeni rezultati ponovo potvrđuju već iznete zaključke u vezi sa cirkulacijom provincijalnog novca u Gornjoj Meziji od kraja 2. i naročito u prvoj polovini 3. v.<sup>142</sup> Kao i na nekropoli Više Grobalja i na Pećinama u najvećem procentu zastupljeni su nalazi provincijalnog novca kovnice Nikeje (170), potom kovnice Viminacijum (99) i Stobi (42), dok su ostale kovnice malobrojnije. Od vremena kada je došlo do osetnog pomanjkanja sitnog bronzanog novca u opticaju, krajem 2. v., prazninu su popunila kovanja Stobija (1 kom. Trajan; 1 kom. 2.v. (?); 40 S. Sever i porodica). Nakon zatvaranja ove kovnice u vreme vladavine Karakale, pa do vremena otvaranja kovnice u

graves (2–3, or even 60 in the case of *culinae*) a sacrificial surface was formed and, consequently, in such situations it is difficult to determine which graves certain coins from the sacrificial surface belong to. These sacrificial surfaces were used over a long period of time (100–150 years), given the thickness of the layers of the investigated *culinae*. If all the public holidays dedicated to the dead, including the private ones, are taken into account, an assumption can be made that the family members of the deceased visited the grave at least 6 or 7 times a year and performed the appropriate rituals.<sup>141</sup> On these occasions coins were used, but during which repasts and to what extent they were used, remains unknown.

If imperial and provincial coinage from graves is observed, 2<sup>nd</sup>-century coins are evidently most prevalent. A noticeable deviation is reflected in the incidence of imperial coinage compared to provincial ranging from Caracalla to Trebonianus Gallus, when imperial specimens occur very sporadically (Graph 10). Similar results were obtained for the coin finds from layers, but with a somewhat larger incidence of imperial coinage from the first half of the 3<sup>rd</sup> century compared to the finds from graves (Graph 11). The obtained results again confirm the already stated conclusions with regard to the circulation of provincial coinage in Upper Moesia from the end of the 2<sup>nd</sup> and particularly in the first half of the 3<sup>rd</sup> century.<sup>142</sup> As with the necropolis of Više Grobalja, at Pećine there is also the highest number of finds of

141 Državni praznici posvećeni mrtvima, upisani u rimski calendar, bili su sledeći: 1) *dies parentales*, koji je trajao od 13.-21. februara, kada su se članovi porodice okupljali na grobu, poklonili senima pokojnika i prineli ponude; 2) *dies violae*, 22. marta, kada sun a grobove odnošene ljubičice; 3) *dies rosae*, nije bio tačno fiksiran praznik a odvijao se od maja do juna, kada su odnošene ruže na grobove; 4) *Lemuria*, održavane su 9., 11. i 13. maja, kada se verovalo da duše umrlih lutaju oko kuća. Prateći rituali bili su privatni i porodični i odvijali su se noću; 5) otvaranje mundusa (*mundus*) odvijalo se tri puta godišnje: 24. avgusta, 5. oktobra i 8. novembra. Tada su otvarana »vrata pakla« i duše umrlih su mogle na kratko da ustupe u svet živih. Druge prilike za odavanje počasti umrlim i posete grobovima bile su npr. rođendan ili godišnjica smrti; cf. Cumont 1922: 71-72; isti 1949: 45, 82-83, 396-398, 435-436; Hope 2007: 232-235.

142 Vojvoda, Mrđić 2015: 14-16, ref. 10-13.

141 The public holidays dedicated to the dead, registered in the Roman calendar, were the following: 1) *Dies Parentales*, lasting from 13–21 February, when family members gathered at the grave to honour the spirits of the deceased and made offerings; 2) *Dies Violae*, on 22 March, when violets were taken to the graves; 3) *Dies Rosae*, was not precisely fixed and took place any time between May and June, when roses were taken to the graves; 4) *Lemuria*, held on 9, 11 and 13 May, when it was believed that the souls of the dead wandered around the houses. The accompanying rites were private and for the family and took place at night; 5) the opening of the *mundus* took place three times a year: 24 August, 5 October and 8 November. At this time the “gates of hell” were opened and the souls of the dead could briefly enter the world of the living. Other occasions to pay respects to the dead and visit the graves were, for example, a birthday or the anniversary of a death; cf. Cumont 1922: 71-72; *id.* 1949: 45, 82-83, 396-398, 435-436; Hope 2007: 232-235.

142 Vojvoda, Mrđić 2015: 14-16, ref. 10-13.

Slika 7 - Grob G1-221 (foto dokumentacija Arheološkog instituta).

Figure 7 - Grave G1-221 (photo documentation of the Institute of Archaeology).

Viminacijumu (oktobar 239. g.) dominiraju primerci kovnice Nikeje (1 kom. Karakala; 2 kom. Elagabal; 83 kom. A. Sever; 2 kom. Maksimin I; 67 kom. Gordijan III, 2 kom. Trajan Decije; 11 kom. neodređenih), da bi se otvaranjem kovnice u Viminacijumu osetno smanjio priliv novca iz Nikeje.<sup>143</sup> Nakon zatvaranja kovnice u Stobiju, u Makedoniji su ponovo počeli sa kovanjem emisija autonomnog novca (Koinon Makedonije), ali ove emisije nisu imale većeg značaja u cirkulaciji na teritoriji Gornje Mezije.<sup>144</sup> Najmlađi zabeleženi primerci provincijalnog kovanja na Pećinama predstavljaju emisije Valerijana I i Galijena iz 254./255. g. (AN XVI) viminacijumske kovnice.

Iz Grafikona 10 i 11 jasnije se sagledava i zastupljenost carskog i provincijalnog kovanja, kako u grobovima tako i u slojevima, prema pojedinim vladarima ili dinastijama. Za razliku od nekropole Više Grobalja gde je zapažena skoro tri puta

<sup>143</sup> Od ukupno 170 primeraka novca Nikeje zabeleženih na nekropoli Pećine, Gordijanu III i Trajanu Deciju pripada 69 kom. ili 40,58%.

<sup>144</sup> Na nekropoli Više Grobalja zabeležen je samo jedan primerak autonomnog makedonskog kovanja iz ovog vremena i to za Gordijana III (cf. Vojvoda, Mrđić 2015: 54), dok na Pećinama nije registrovan ni jedan.

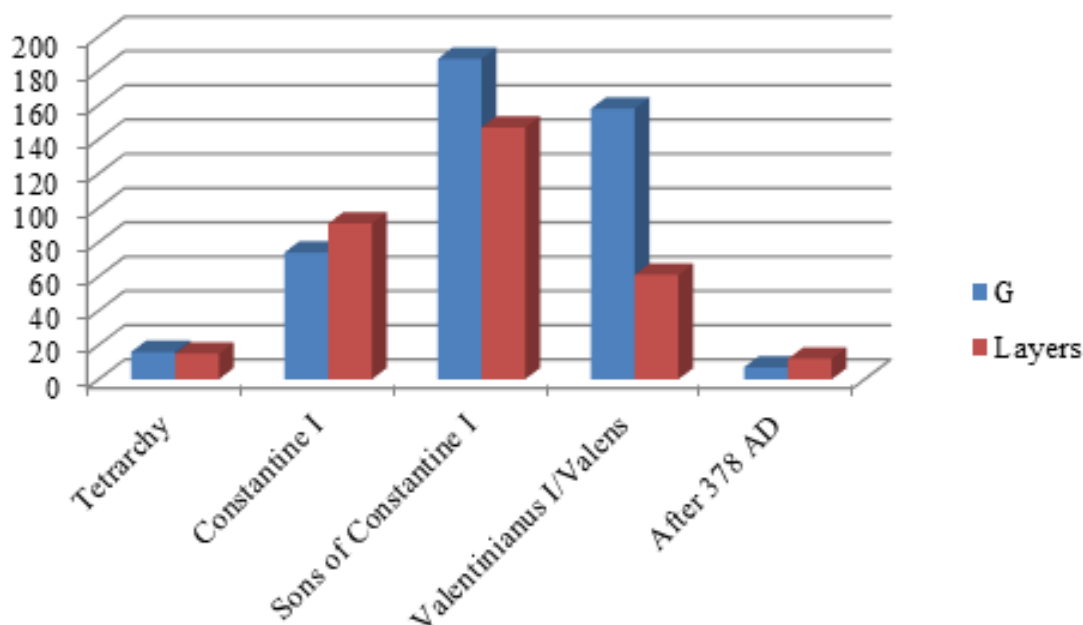

provincial coinage from the Nicaean mint (170), followed by the mint of Viminacium (99) and Stobi (42), whilst from other mints there are fewer. From the time when there was a perceptible lack of small bronze coins in circulation, in the late 2<sup>nd</sup> century, the shortfall was filled by coinage from Stobi (1 coin of Trajan; 1 coin from the 2<sup>nd</sup> century (?); 40 of S. Severus and family). After this mint's closure during the reign of Caracalla, until the opening of the mint in Viminacium (October, 239), coinage from the Nicaean mint dominates (1 coin of Caracalla; 2 of Elagabalus; 83 of A. Severus; 2 of Maximinus I; 67 of Gordian III; 2 of Trajan Decius; 11 undetermined). With the opening of the mint in Viminacium, the influx of coinage from Nicaea was noticeably reduced.<sup>143</sup> After the closure of the mint in Stobi, Macedonia once again started minting issues of autonomous coins (the Koinon of Macedonia), but these issues did not have any major significance within the circulation in the territory of Upper Moesia.<sup>144</sup> The youngest recorded specimens of provincial coinage at Pećine are those of Valerian I and Gallienus from 254/255 (AN XVI), from the mint of Viminacium.

Graphs 10 and 11 provide a clearer picture of the incidence of imperial and provincial coinage, both in graves as well as from layers, according to individual rulers or dynasties. In contrast to the necropolis of Više Grobalja, where an almost three times greater incidence of specimens of imperial coinage of the Julio-Claudian dynasty is observed in graves compared to the finds from layers, at Pećine this difference is minimal (10.35% to 9.58%).<sup>145</sup> Provincial coinage of this dynasty was, at Pećine, recorded only in graves. Specimens of the Flavian dynasty do not show

<sup>143</sup> Of a total of 170 coins of Nicaea recorded at the necropolis of Pećine, 69 coins or 40.58% belong to Gordian III and Trajan Decius.

<sup>144</sup> At the necropolis of Više Grobalja, only one specimen of the autonomous Macedonian coinage from this time was noted, that of Gordian III (cf. Vojvoda, Mrđić 2015: 54), while at Pećine not a single coin was recorded.

<sup>145</sup> Cf. Vojvoda, Mrđić 2015: 50-51, Graphs 11 and 12. The text under Graphs 11 and 12 was transposed due to a printing error. The graph on p. 50 (labelled as Graph 11) refers to the finds from layers and should have been labelled as Graph 12. Also, the graph on p. 51 refers to the finds from graves and should have been labelled as Graph 11. The authors on this occasion apologise for this error.

Grafikon 12 – Zastupljenost carskog kovanja 4. veka u grobovima i slojevima prema vladarima.  
Graph 12 – Presence of the imperial coinage 4<sup>th</sup> century from graves and layers, according to emperors.

veća prisutnost novca carskog kovanja Julijejsko-Klaudijejske dinastije u grobovima u odnosu na nalaze iz slojeva, na Pećinama je ova razlika minimalna (10,35% prema 9,58%).<sup>145</sup> Provincijalno kovanje ove dinastije registrovano je na Pećinama samo u grobovima. Primerci Flavijejske dinastije ne pokazuju velika odstupanja carskog i provincijalnog novca u grobovima i slojevima. U Trajanovim emisijama zabeležena je daleko veća prisutnost carskog kovanja u odnosu na provincijalno, kako u grobovima tako i u slojevima, ali su u svakom slučaju zastupljeni približnim procentima (10,72 prema 10,36% i 1,82 prema 1,50%).

Najveću zastupljenost carskog kovanja u nalazima novca na nekropoli beleže primerci emitovani u vreme Hadrijana i Antonina Pija (zajedno 44,40% od svih nalaza iz grobova i 34,65% od nalaza iz slojeva). Posmatrano pojedinačno emisije Hadrijana su nešto slabije zastupljene

large deviations between imperial and provincial coinage in graves and layers. Regarding Trajan's issues, there is a far greater presence of imperial coinage compared to provincial, both in graves and layers, although with a similar percentage of incidence (10.72% to 10.36% and 1.82% to 1.50%).

The highest incidence of imperial coinage among the coin finds at the necropolis is recorded in the specimens issued at the time of Hadrian and Antoninus Pius (collectively, 44.40% of all finds from graves and 34.65% of finds from layers). Individually observed, the issues of Hadrian are slightly less prevalent (20.95% in graves and 16.80% in layers), compared to the issues of Antoninus Pius (23.45% in graves and 17.85% in layers). In terms of provincial coinage of this period, it should be noted that the issues of Hadrian and Antoninus Pius are present in graves in an equal, minimal percentage of 1.85%, while their incidence is slightly larger among the finds from layers, amounting to 3.48% and 2.98%. Thereafter, at the time of Marcus Aurelius and Commodus, there is an obvious decline in the presence of coins at the necropolis, equally in graves and layers. The percentage of imperial coinage in graves drastically drops to 5.98% (M. Aurelius) and 1.50% (Commodus). Provincial coinage is present with

145 Cf. Vojvoda, Mrđić 2015: 50-51, Grafikon 11-12. U štampi je načinjena greška i zamenjen tekst ispod grafikona 11 i 12. Grafikon na str. 50 (potpisan kao Grafikon 11) odnosi se na nalaze iz slojeva i trebalo je da bude potpisan kao Grafikon 12. I obrnuto, Grafikon na str. 51 odnosi se na nalaze iz grobova i trebalo je da bude potpisan kao Grafikon 11. Autori se ovom prilikom izvinjavaju zbog nastale greške.

(20,95% u grobovima i 16,80% u slojevima) u odnosu na emisije Antonina Pija (23,45% u grobovima i 17,85% u slojevima). U primeru provincijalnog kovanja ovog perioda, treba naglasiti da su istim, minimalnim, procentom prisutne emisije Hadrijana i Antonina Pija u nalazima iz grobova sa 1,85% i nešto višim u nalazima iz slojeva, sa 3,48% i 2,98%. Nakon toga, u vreme Marka Aurelija i Komoda, očito je veliko opadanje u prisutnosti novca na nekropoli, jednako u grobovima i u slojevima. Procenat carskog kovanja u grobovima drastično pada na 5,98% (M. Aurelije) i 1,50% (Komod). Provincijalno kovanje zastupljeno je samo sa 2,29% u emisijama Marka Aurelija, dok se uopšte ne beleži u izdanjima Komoda. Sa druge strane, carske emisije Marka Aurelija iz slojeva prisutne su u duplo većem broju od onih iz grobova (11,16%), dok kod Komoda ostaju u sličnim procentima (1,84%).

Od vremena Septimija Severa odnosi se menjaju u korist provincijalnog kovanja u odnosu na carsko kako u nalazima iz grobova (3,24% carsko i 7,30% provincijalno) tako i u onima iz slojeva (5,65% carsko i 12,94% provincijalno). Počev od vladavine Septimija Severa pa sve do Galijena, kako u grobovima tako i u slojevima na nekropoli, dominantna su provincijska izdanja u odnosu na carska. Najveća zastupljenost provincijskih emisija zabeležena je tokom vladavine Aleksandra Severa (26,95% u grobovima i 28,85% u slojevima), a potom i za vreme Gordijana III (25,12% u grobovima i 28,35% u slojevima).

Velika zastupljenost novca 4. v. na nekropoli Pećine i naročito pojava ostava novca iziskuju posebnu pažnju i detaljniju analizu.<sup>146</sup> Sažimanjem perioda dobili smo sledeću zastupljenost novca 4. v. na nekropoli Pećine koji su predstavljeni Grafikonom 12.

Iz Grafikona 12 jasno proizilazi da su u najvećoj meri zastupljene emisije sinova Konstantina I, i to u prvom redu Konstancija, kako u grobovima tako i u slojevima na nekropoli. Sledi novac Valentinijana I i Valensa koji je pronađen u najvećoj meri u okviru grobnih celina. Potom emisije Konstantina I kada su u pitanju nalazi iz grobova, ali vidljivo je da su nalazi iz slojeva ovog vremena bolje zastupljeni od onih iz vremena Valentinijana I i Valensa. Najveći broj

only 2.29% from the issues of Marcus Aurelius, while that of Commodus is not recorded. On the other hand, the number of imperial issues of Marcus Aurelius is twice as large in layers compared to graves (11.16%), while those of Commodus remain at a similar percentage (1.84%).

From the time of Septimius Severus, ratios change in favour of provincial coinage compared to imperial, both among the finds from graves (3.24% imperial and 7.30% provincial) as well as those from layers (5.65% imperial and 12.94% provincial). Starting from the reign of Septimius Severus through to Gallienus, in graves and layers at the necropolis, provincial issues are dominant compared to imperial. The highest incidence of provincial issues is recorded for the period during the reign of Alexander Severus (26.95% in graves and 28.85% in layers), and then at the time of Gordian III (25.12% in graves and 28.35% in layers).

The high incidence of 4<sup>th</sup>-century coins at the necropolis of Pećine and, in particular, the occurrence of coin hoards require special attention and a more detailed analysis.<sup>146</sup> By summarising periods, a picture of the incidence of 4<sup>th</sup>-century coins at the necropolis of Pećine was obtained, as presented in Graph 12.

Graph 12 clearly shows that the issues of the sons of Constantine I, primarily Constantius, are most prevalent, both in graves as well as in layers at the necropolis. Next are coins of Valentinian I and Valens, which were discovered mainly within graves. Then come the issues of Constantine I, in terms of finds from graves, but it is evident that finds from layers from this time are more prevalent than those from the time of Valentinian I and Valens. The largest number of specimens from the 4<sup>th</sup> century originate from 12 coin hoards (Table 9), which represent a specific phenomenon within individual graves or large masonry tombs in which a number of burials were performed. The problem with most of these finds is the fact that the majority of tombs were robbed in Antiquity and that some hoards only survived as a result of the negligence of the robbers who were obviously focused on the sarcophagi and graves themselves rather than on other contents

<sup>146</sup> Novcu 4. v. pridodati su i nalazi novca iz vremena tetrarhije od kojih su neki datovani u 3. v. ali smo smatrali prirodnijim da budu svrstani zajedno. U ovu analizu pridodati su i malobrojni primerci sa početka 5. v.

<sup>146</sup> Coin finds from the time of the Tetrarchy, some of which dated to the 3<sup>rd</sup> century, were included among the 4<sup>th</sup>-century coins, as it seemed logical to group them together. A small number of specimens from the beginning of the 5<sup>th</sup> century were also included in this analysis.

primeraka 4. v. potiče iz 12 ostava novca (Tabela 9) koje predstavljaju posebnu pojavu u okviru pojedinačnih grobnih celina ili većih zidanih grobnica u kojima je bilo obavljeno više sahrana. Problem u većini ovih nalaza predstavlja činjenica da je većina grobnica bila opljačkana još u antici i da su pojedine ostave došle do nas zahvaljući nepažnji pljačkaša koji su bili očito fokusirani na same sarkofage i grobove, nego na ostali sadržaj u okviru zidanih grobnica. Ovo otvara još jedno pitanje u vezi ostava novca pohranjenih u okviru monumentalnih zidanih grobnica koje su sadržavale više sahrana u različitom hronološkom okviru. U primeru G – 3971, G – 4006, G – 3904 i G – 4816 ostave novca pronađene su u štu grobnice na nivou poda, nevezano za bilo koju od grobnih celina u okviru grobnice.<sup>147</sup> Monumentalne zidane grobnice sasvim sigurno su bile porodične. Kako su u najvećem broju primera grobovi (sarkofazi, olovni kovčezi) u okviru grobnica opljačkani ne možemo ni pretpostaviti kakve su priloge sadržavali, osim da su sigurno bili veoma bogati. Slučajno previđene od strane pljačkaša, do nas je došlo tek nekoliko veoma značajnih skupnih nalaza. Za pojedine od ovih ostava smo takođe sigurni da su rasute prilikom pljački, što treba uzeti u obzir prilikom datovanja grobnica. Neki od ovih nalaza, kao što je pomenuto, nađeni su na podu grobnica i otvaraju pitanja kome su bili namenjeni, kao i prilikom koje sahrane su u određenu grobnicu bili priloženi? Iz opljačkanih grobova nedostaju nam prilozima za datovanje pojedinih sahrana i pripisivanja ostava određenoj sahrani.<sup>148</sup> Ove ostave su priložene prilikom otvaranja porodične grobnice za određenu sahranu. Iz kojeg razloga nisu predstavljale prilog u okviru određenog groba, već su ostavljene na podu grobnice? Jedno od objašnjenja koje se nameće je da su predstavljale »sredstva« za život na drugom svetu za sve članove porodice već ranije sahranjene, kao vrstu obnovljenog darovanja mrtvih ili su predstavljali ličnu imovinu u toj prilici sahranjene osobe. U svakom slučaju, objašnjenja pojave ostava na podu grobnica ostaju za sada u sferi pretpostavki, sve dok ne bude imali podatke iz neopljačkanih grobnica.

147 Ovo su naravno primeri opljačkanih grobnica u kojima su ostave pronađene, sasvim sigurno ih je bilo daleko više ali za nas nisu sačuvane jer su prilikom pljački nestale.

148 U pojedinim primerima sačuvan je po koji novčić iz samih grobova, ali ne možemo biti sigurni u pouzdanost datovanja opljačkane grobne celine na osnovu toga.

within the masonry tombs. This raises yet another question with regard to the coin hoards deposited within monumental masonry tombs that contained a number of burials in a different chronological range. In the case of G – 3971, G – 4006, G – 3904 and G – 4816, the coin hoards were found in the rubble on the floor of the tomb, unrelated to any of the graves within the tomb.<sup>147</sup> The monumental masonry tombs were undoubtedly family tombs. As most of the graves (sarcophagi, lead coffins) within the tombs were robbed, it cannot even be assumed what kind of inventory they contained, except that they were certainly very rich. Only a few very significant collective finds survived, which were overlooked by the robbers. Furthermore, there is no doubt that some of these hoards were scattered during the robberies, which should be taken into account when dating the tombs. Some of these finds, as already mentioned, were discovered on the floor of the tombs and they raise the questions of who they were intended for, as well as during which funeral they were deposited in a particular tomb. From the robbed graves the inventory is missing for dating certain burials and attributing hoards to a specific funeral.<sup>148</sup> These hoards were deposited during the opening of a family tomb for a particular funeral. For what reason were they not included in the inventory of a specific grave, but left on the floor of the tomb? One explanation that arises is that they represented “means” for living in the other world for all family members previously buried, as a kind of a renewed offering for the dead, or they were the personal property of the individual buried on that occasion. Whatever the case may be, the explanations regarding the occurrence of hoards on the floor of tombs remain for now in the sphere of speculation, until the data from undisturbed tombs is obtained.

The situation is different with hoards that were discovered within certain graves and for which the place of finding in relation to the deceased is known (G – 1176, G – 2800, G – 3946, G – 4076, G – 3079, G – 5566 and G – 224). In four cases, coins were discovered around the head of

147 These are, of course, examples of robbed tombs in which the hoards were discovered, and there were certainly many more that were not preserved as they were lost due to the robberies.

148 In some instances, an occasional coin from the graves is preserved, but this does not provide a reliable basis on which to date the robbed graves.

Drugačija je situacija sa ostavama koje su pronađene u okviru pojedinih grobnih celina i za koje znamo mesto nalaza u odnosu na pokojnika (G – 1176, G – 2800, G – 3946, G – 4076, G – 3079, G – 5566 i G – 224). U četiri primera novac je pronađen oko glave pokojnika i po dva puta na tozou i oko desne noge. U svojoj studiji Gorecki (Gorecki) je konstatovao sličnu situaciju vezanu za običaj polaganja novca u grobove sa inhumacijom, na nekropolama u oblasti između reka Rajne, Mozela i Some.<sup>149</sup> Pojava ostava novca 4. v. u okviru porodičnih grobnica i pojedinih grobnih celina izgleda da predstavlja potvrdu pokojnikovog društvenog statusa i prestiža kao njegova lična imovina.<sup>150</sup>

Bez obzira na rezultate dosadašnjih istraživanja pogrebnih rituala u vreme rimskog carstva, izgleda da ih nikada nećemo u potpunosti razumeti. Ali detaljnom analizom grobnih celina, iz što većeg broja nekropola širom nekadašnjeg Carstva, svakako se možemo približiti istini. Proučavanje uloge pojedine vrste priloga u grobovima, u ovom slučaju novca, sasvim sigurno delimično doprinosi razrešavanju ovog problema. Analizom uloge novca u pogrebnim ritualima na južnim nekropolama Viminacijuma, pokazuje se da je ona daleko komplikovanija nego što se to na prvi pogled činilo. Uočeno je da su neki od novčića imali funkciju »Haronovog obola«, drugi su predstavljali sredstva za putovanje i život na drugom svetu, neki su bili u ulozi nakita i imali apotropejsko značenje. Očito je neophodan kompleksniji interdisciplinarni pristup u tumačenju grobnih celina sa viminacijumskih nekropola. Kao što bi bili: utvrđivanje porekla, pola, starosti, ekonomskog statusa pokojnika, sa tim povezati različite rituale sahranjivanja, uzeti u obzir hronološke okvire i tadašnja istorijska događanja u celini i posebno u ovom delu Carstva (kao što su npr. prodor novih religioznih kultova, moda, itd.). Iz svega proizilazi da je naše proučavanje uloge novca u pogrebnim ritualima samo deo mozaika koji je neophodno popuniti kako bi se barem delimično približili razumevanju pogrebnih rituala praktikovanih na Viminacijumu.

149 Nekropola Mayen 7 kom. na krrlici; Oudenburg 5 kom. na karlici; Oudenburg 88 kom. kod članka noge; Köln 38 kom. kraj desne šake; Köln 7 kom. kraj levog kolena; Köln-Lindenthal 23 kom. kraj desne potkolenice; Ehrang 18 kom. kraj desnog stopala; cf. Gorecki 1975: 216, Abb. 9.

150 Gorecki 1975: 256.

the deceased and twice on the torso and around the right leg. In his study, Gorecki noted a similar situation with regard to the custom of depositing coins in inhumation burials at the necropolises in the region between the Rhine, Moselle and Some rivers.<sup>149</sup> The appearance of 4<sup>th</sup>-century coin hoards within family tombs and certain graves as the deceased's personal property seems to be a confirmation of his social status and prestige.<sup>150</sup>

Regardless of the results of research conducted so far on funerary rituals at the time of the Roman Empire, it seems that they will never be fully understood. However, a detailed analysis of graves from as many necropolises as possible across the former Empire can certainly bring us closer to the truth. Studying the role of particular types of grave goods, in this case coins, definitely contributes in part to resolving this problem. The analysis of the role of coins in funerary rituals at the southern necropolises of Viminacium shows that it is far more complicated than it at first appeared. It has been noted that some of the coins functioned as "Charon's obol", others were the means for the journey to and life in the other world, while some were used as jewellery and had an apotropaic meaning. A more complex interdisciplinary approach is obviously needed in the interpretation of graves from the Viminacium necropolises. This would entail: the determination of origin, sex, age and economic status of the deceased and their links to the various burial rituals, the consideration of the chronological frameworks and the wider historical events and those particular to this part of the Empire (such as the incursion of new religious cults, trends, etc.). In summary, it follows that our research into the role of coins in funerary rituals is only a piece of a mosaic that has to be filled in so that, at least in part, it is possible to come closer to understanding the funerary rituals practised at Viminacium.

149 The necropolis of Mayen – 7 coins on the pelvis; Oudenburg – 5 coins on the pelvis; Oudenburg – 88 coins near the ankle; Köln – 38 coins next to the right hand; Köln – 7 coins next to the left knee; Köln-Lindenthal – 23 coins next to the right lower leg; Ehrang – 18 coins next to the right foot; cf. Gorecki 1975: 216, Abb. 9.

150 Gorecki 1975: 256.
