PREDGOVOR

Monografija "Nalazi novca sa viminacijumske nekropole Više grobalja i njihova uloga u pogrebnom ritualu" predstavlja studiju nastalu u okviru projekta IRS – Viminacium, rimski grad i legijski vojni logor - istraživanje materijalne i duhovne kulture stanovništva primenom najsavremenijih tehnologija daljinske detekcije, geofizike, GIS-a, digitalizacije i 3D vizualizacije (Projekat III 47018) – Ministarstvo prosvete, nauke i tehnološkog razvoja Republike Srbije.

Autori zahvalnost duguju u prvom redu mr. Bojani Borić-Brešković i dr. Miloju Vasiću na nesebičnoj pomoći i korisnim savetima prilikom obrade materijala i izrade monografije. Zahvaljujemo se, takođe, Narodnom muzeju u Požarevcu na ustupljenom materijalu, kao i kolegicama Dragani Spasić-Đurić i Jasmini Živković na njihovom angažovanju prilikom izrade ove studije.

Veliku zahvalnost dugujemo i svim članovima "viminacijumske ekipe", u prvom redu dr. Miomiru Koraću i dr. Snežani Golubović, na podršci koju su nam pružili.

Autori

FOREWORD

The monograph "Coin Finds from the Viminacium Necropolis of Više Grobalja and Their Role in Funerary Ritual" presents a study originated within project "Viminacium, roman city and military legion camp – research of material and non-material of inhabitants by using the modern technologies of remote detection, geophysics, GIS, digitalization and 3D visualization" (Project III 47018) – of the Ministry of Education, Science and Technological development of the Republic of Serbia.

Authors owe their gratitude to Bojana Borić-Brešković and Miloje Vasić on their unselfish help and valuable advice during material analyse and publication preparation. We are also gratefull to the Regional Museum of Požarevac on the material they provided, as well as colleagues Dragana Spasić-Đurić and Jasmina Živković on their engagement while producing this study.

We owe enormous gratitude to the members of the Viminacium research team, primarily to Miomir Korać and Snežana Golubović on all support they provided.

Authors

UVOD

Za približno pet vekova života na Viminacijumu formirano je više nekropola, one su prema položaju legijskog logora i civilnih naselja, podeljene na: severne, južne, istočne i zapadne nekropole. Zbog potreba izgradnje TE Kostolac 2, na području južnih nekropola se, počev od 1977. godine, obavljaju zaštitna arheološka istraživanja većeg obima.¹ U okviru areala južnih nekropola izdvojeno ih je devet, od čega vremenu rimske dominacije pripada pet nekropola koje obuhvataju period od sredine I do prvih decenija V veka.² Dve najstarije nekropole, „Pećine“ i „Više grobalja“ formirane su sredinom I veka i na njima je praktikovano istovremeno sahranjivanje kremiranih i inhumiranih pokojnika. Promena pogrebnog rituala do koje je došlo oko sredine III veka dovela je do napuštanja ova dva grobljanska areala.³ Na trećoj izdvojenoj nekropoli, takođe na lokalitetu »Pećine«, sahranjivani su samo spaljeni pokojnici, sa izuzetkom pojave grobova sa inhumacijama, koji su u svim slučajevima bili dečji. Nekropola je formirana na prelazu iz I u II vek i korišćena je do sredine III veka. Obred kremacije pokojnika je na južnim nekropolama Viminacijuma bio napušten sredinom III veka i od tada jedini vid sahranjivanja predstavlja inhumacija. U to vreme formirane su u južnom arealu još dve nekropole: »Burdelj« i »Pećine«, od kojih je prva korišćena do oko sredine IV veka, a druga do sredine V veka.⁴

Tokom pomenutih zaštitnih istraživanja 70-tih i 80-tih godina prošlog veka, na nekropoli Više grobalja otkriven je ukupno 3161 primerak novca.⁵ Od tog broja obrađeno je u celini 2736

1 Зотовић 1986: 41; Golubović 2008: 15.

2 Najstarija nekropola pripada keltskom stanovništvu koje je ovde živelo krajem IV i početkom III veka s.e. Dok dve najmlađe nekropole pripadaju periodu seobe naroda: ostrogotska koja je korišćena u drugoj polovini V veka i gepidska iz sredine VI veka. Najmlađa je manja srednjovekovna nekropola, okvirno datovana od XII-XIV veka (cf. Зотовић 1986: 41, ref. 4; 54-55; Зотовић, Јордовић 1990: 2).

3 Зотовић 1986: 42-45; Зотовић, Јордовић 1990: 1-34; Korać, Golubović 2009: 12-13, ref. 15-17.

4 Ova nekropola na lokalitetu »Pećine« preseca teritorije starijih već napuštenih nekropola sa sahranama kremiranih i inhumiranih pokojnika (cf. Зотовић 1986: 52).

5 Prilikom publikovanja građe sa zaštitnih istraživanja prvobitni rukovodioci, Lj. Zotović i Č. Jordović, odlučili su se najpre za prezentaciju nekropole „Više grobalja“ kao

INTRODUCTION

In the course of about five centuries of life at Viminacium, a number of necropolises were formed, which were divided, based on the position of the legionary camp and civilian settlement, into: northern, southern, eastern and western necropolises. Due to the required construction of the TPP Kostolac 2, since 1977, large-scale rescue archaeological investigations have been conducted in the area comprising the southern necropolises.¹ Within this area, nine were recorded, five of which belong to the period of the Roman domination from the mid-1st to the first decades of the 5th century.² The two oldest necropolises, Pećine and Više grobalja, were established in the mid-1st century, and cremation and inhumation burials were simultaneously practised at these sites. A change in the funerary ritual, which occurred around the mid-3rd century, resulted in the abandonment of these two burial grounds.³ The third of the recorded necropolises, also at the site of Pećine, only consisted of cremation burials, with the exception of some graves containing the inhumed remains of children. The necropolis was formed at the turn of the 1st and the 2nd century and was used until the mid-3rd century. The cremation ritual was abandoned in the mid-3rd century at the southern necropolises of Viminacium and, since then, inhumation represented the only form of burial. At the time, two additional necropolises were established in the southern area, Burdelj and Pećine, the first of which was in use until about the mid-4th century and the second until the mid-5th century.⁴

In the course of the aforementioned rescue investigations conducted at the necropolis of

1 Зотовић 1986: 41; Golubović 2008: 15.

2 The oldest necropolis belongs to the Celtic population that lived here in the late 4th and the early 3rd century BC, whereas two younger necropolises belong to the Migration period: the Ostrogothic, in use in the second half of the 5th century, and the Gepidic, from the mid-6th century. The most recent is a small medieval necropolis, roughly dated between the 12th and 14th century (cf. Зотовић 1986: 41, ref. 4; 54-55; Зотовић, Јордовић 1990: 2).

3 Зотовић 1986: 42-45; Зотовић, Јордовић 1990: 1-34; Korać, Golubović 2009: 12-13, ref. 15-17.

4 This necropolis at the site of Pećine overlaps the territory of the older and already abandoned necropolises with cremation and inhumation burials (cf. Зотовић 1986: 52).

primeraka koji se kreću u rasponu od II veka s.e. do kraja IV veka n.e. (Tabela 1).⁶ U najvećoj meri

najstarije po vremenu nastanka. Radi velikog broja otkrivenih grobova, mnoštva materijala i obimne terenske dokumentacije, autori su se odlučili da zadrže terensku numeričku signaturu, kako eventualna prenumeracija ne bi izazvala zabune kod potonjih istraživača (cf. Зотовић, Јордовић 1990: 3). Nakon izvesnog zastoja u objavljivanju građe, nova arheološka ekipa, na čelu sa M. Koraćem, nastavila je započeti posao po već usvojenom principu (cf. Korać, Golubović 2009). Novac je delom publikovan u Svesci 1, i detaljnije u Svesci 2, kao deo nalaza iz prvih 550 inhumacija i 530 kremacija (cf. Зотовић, Јордовић 1990: 55-110; Arsenijević 2009: 439-510).

6 Svi nalazi novca popisani su i obrađeni tokom 2005. i 2006. godine. Od ukupnog broja otkrivenih primeraka, koji su registrovani u terenskoj dokumentaciji (3161), konstatovano je da je izvestan broj primeraka izgubljen, deo je propao tokom procesa konzervacije zbog lošeg stanja očuvanosti, a deo novca nije niti podvrgnut procesu konzervacije jer se radilo samo o loše očuvanim fragmentima novca. Drugu i treću grupu činili su uglavnom novci koji su bili izloženi gorenju prilikom kremacije, što je bio

Više grobalja in the 1970s and '80s, a total of 3161 coins were discovered.⁵ Of this number, a total of 2736 specimens were processed, ranging from the 2nd century BC to the end of the 4th century AD (Table 1).⁶ Imperial coinage represented the larg-

5 When publishing the material from the rescue investigations, the initial directors Lj. Zotović and Č. Jordović decided first to present the necropolis of Više grobalja, having the oldest date of origin. Due to the large number of discovered graves, the extensive material and the comprehensive fieldwork documentation, the authors opted to keep the fieldwork numbering system, so as to avoid confusion for subsequent researchers with possible re-numbering (cf. Зотовић, Јордовић 1990: 3). After a delay in the publishing of the material, a new archaeological team, under the leadership of M. Korać, resumed the previous work, adhering to the formerly adopted principle (cf. Korać, Golubović 2009). The coins were partially published in Volume 1, and in more detail in Volume 2, as part of the finds from the first 550 inhumations and 530 cremations (cf. Зотовић, Јордовић 1990: 55-110; Arsenijević 2009: 439-510).

6 All the coin finds were listed and processed during 2005

Σ	3161

Tabela/Table 2 – Zastupljenost novca na nekropoli prema mestu nalaza./Distribution of coins at the necropolis based on the location of finding.

je zastupljeno carsko kovanje sa 79,61%, potom provincijsko sa 20,30%, dok su grčko kovanje, rimsko republikansko i jedna imitacija iz IV veka, za-
beleženi u minimalnim procentima (0,03%).

MESTO NALAZA NOVCA U OKVIRU NEKROPOLE

Ukupan broj primeraka novca (3161) pronađen je u grobovima i u sloju na nekropoli (uglavnom nalazi sa žrtvenih površina formiranih iznad pojedinačnih ili grupe grobova). Od 2211 groba sa inhumiranim pokojnicima (označeni sa G), u 621 grobu je pronađen novac kao prilog, dok je u ukupno 1776 grobova sa kremiranim pokojnicima (označeni sa G1), u 725 grobova konstatovan novac. Kako je u nekim grobovima pronađeno po više primeraka novca, dolazimo do ukupnog broja novca pronađenog u svim grobovima koji iznosi 1595 primeraka (Tabela 2).⁷

razlog njihove loše očuvanosti. Novac koji je bilo moguće obraditi (2736) pored dobro i solidno očuvanih primeraka, sadrži i jedan manji broj (28 carskog i 52 provincijskog) primeraka koji su teže oštećeni te ih nije bilo moguće sa sigurnošću razvrstati po vekovima (Tabele 1-2).

7 Navedeni brojevi grobova (G i G1), koji su sadržavali novac kao prilog, odnose se na grobove koji su numerisani u terenskoj dokumentaciji. Pored njih pojavljuje se i izvestan broj grobova koji su u terenskoj dokumentaciji označeni kao »razrušeni« i kao takvi nisu numerisani. Radi se o grobovima koji su bili u većoj meri uništeni kasnijim ukopima

est proportion with 79.61%, followed by provincial with 20.30%, whereas Greek coinage, Roman republican and an imitation from the 4th century were noted in a minimal percentage (0.03%).

LOCATION OF COIN FINDS WITHIN THE NECROPOLIS

All the discovered coins (3161) were found in graves and in the layers of the sacrificial areas (mainly confined to those parts formed directly above individual or groups of graves) at the necropolis. Of the 2211 inhumation burials (marked as G), coins as grave goods were discovered in 621 graves, while out of the total of 1776 cremation burials (marked as G1), coins were noted in 725 graves. As some graves contained a number of coins, the total number of coins discovered in all of the graves amounts to 1595 specimens (Table 2).⁷

and 2006. Of the total number of the discovered coins which were registered in the fieldwork documentation (3161), it was ascertained that a number of specimens had been lost, some were ruined during the process of conservation due to their poor state of preservation, whereas a number had not even been subjected to the process of conservation since they consisted only of poorly preserved coin fragments. The second and the third group mainly comprised coins that were exposed to burning during the cremation, which was the reason for their poor state of preservation. Of the coins that could be processed (2736), in addition to the well preserved specimens, there was also a small number of coins (28 imperial and 52 provincial) which were badly damaged and, consequently, it was impossible to reliably classify them into centuries (Table 1-2)..

7 The listed numbers of graves (G and G1), which contained coins in their inventory, refer to those that were numbered in the fieldwork documentation. In addition, there are a number of graves that were recorded as "devastated" in the fieldwork documentation and, as such, were not numbered. These graves had largely been destroyed by subsequent burials or mechanical disturbance. Each of the 28 such examples (21 – G and 7 – G1) also contained a coin in their inventory. These graves were not taken into account in the statistical calculations of this work, primarily due to the uncertainty as to whether or not they really belong to a particular grave. The remaining coins (1538) were discovered in the layers of the sacrificial areas at the necropolis. The stated calculations, presented

	Broj grobova/ Number of graves	Broj grobova koji sadrže novac/Num- ber of graves with coins	%
G	2211	621	28,08
G1	1776	725	42,82
Σ	3987	1346	33,74

Tabela/Table 3 – Zastupljenost novca u grobovi-
ma./ Incidence of coins in graves.

Ako bi posmatrali zbirno grobove sa inhuma-
cijom i kremacijom (3987) i one koji su sadržavali
numizmatičke nalaze (1346), procenat zastuplje-
nosti grobova sa novcem kao prilogom iznosio bi
33,74%. Međutim, ako ih posmatramo odvojeno,
vidimo da se u grobovima sa kremacijom u većem
procentu pojavljuje novac kao prilog, 42,82% u
odnosu na 28,08% u grobovima sa inhumacijom
(Tabela 3, Grafikon 1). Ovi rezultati potvrđuju ve-
liku zastupljenost novca kao priloga u grobovima
u odnosu na određene analogne nekropole čije
su nam analize poznate.⁸ Istovremeno, možemo

ili su uništeni radom mehanizacije. U slučaju 28 ovakvih
primera (21 – G i 7 – G1) takođe je pronađen po jedan
primerak novca kao prilog. Navedeni grobovi nisu uzeti u
obzir prilikom statističkih izračuna u ovom radu, u prvom
redu zbog nejasnoća da li zaista pripadaju određenom
grobu ili ne. Ostatak novca (1538) pronađen je u sloju na
nekropoli. Navedeni izračuni u Tabelama 2-3 i Grafikonu
1 izvedeni su na osnovu ukupnog broja pronađenih prim-
eraka novca, a na osnovu terenske dokumentacije.

8 Na nekropolama u Brigetiju (Brigetio) se ovaj procenat
kreće (za tri nekropole) od 19,54 – 29,46%; što prosečno
iznosi 20,16% (cf. Găzdac-Alföldy, Găzdac 2009: 162, Fig.
I). Na Emonskim (Emona) nekropolama ova zastupljenost
iznosi 14,4% (cf. Petru 1972; Plesničar-Gec 1972; Miškec
2012: 135). Na zapadnim Ptujskim (*Poetovio*) nekropola-
ma ovaj procenat iznosi 18,17% (u 787 otkrivenih grobo-
va je u 143 pronađen novac) (cf. Istenič 2000: 14-259). U
antičkom Singidunumu ovaj procenat iznosi 12,59 (u 270
otkrivenih grobova je u 34 pronađen novac) (cf. Simić
1997: 46; Pop-Lazić 2002: 19-39). U primeru poslednje tri
nekropole navedene procenat treba uzeti sa izvesnom
rezervom, s obzirom na nedostatke i nejasnoće doku-
mentacije sa starih iskopavanja, na koje su naišli potonji
istraživači prilikom publikovanja nekropola.

Collectively observing graves with inhuma-
tions and cremations (3987), those with numis-
matic finds (1346) amount to a percentage of
33.74%. If, however, they are observed separately,
it is apparent that graves with cremations con-
tain a larger percentage of coins, amounting to
42.82% compared to 28.08% in graves with inhu-
mations (Table 3, Graph 1). These results confirm
a significant occurrence of coins as grave goods in
relation to some analogous necropolises whose
analyses are familiar to us.⁸ At the same time, it
can be concluded that the custom of depositing
coins in the grave was practised at Viminacium
only by approximately a third of its population.

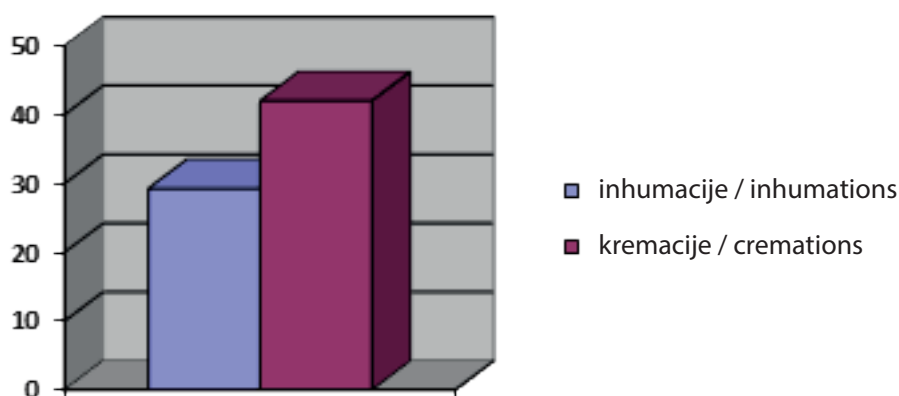

INCIDENCE OF IMPERIAL AND PROVINCIAL COINS IN GRAVES

Comparing the overall incidence of imperial
and provincial coinage from graves, according to
century, it can be seen that coins from the 2nd
century are predominant, followed by 1st, 3rd and, to a
very small degree, 4th century coins (Graph 2).⁹ If,
however, the imperial and provincial coinage and
their percentage according to century are com-
pared separately, a somewhat different picture

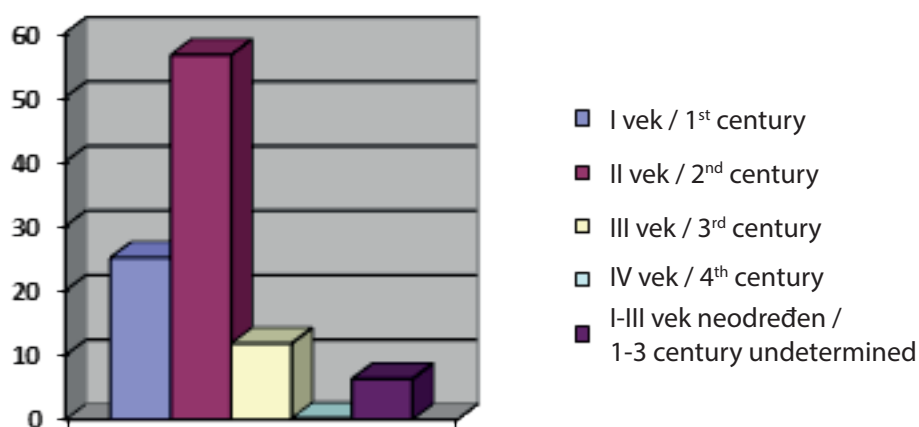

in Tables 2–3 and Graph 1, were obtained based on the
total number of discovered coins, as recorded in the field-
work documentation.

8 At the necropolises at Brigetio, this percentage rang-
es (for three necropolises) between 19.54 and 29.46%,
which, on average, amounts to 20.16% (cf. Găzdac-
Alföldy, Găzdac 2009: 162, Fig. I). At the necropolises of
Emona, it is 14.4% (of the 2554 discovered graves, coins
were detected in 210) (cf. Petru 1972; Plesničar-Gec 1972;
Miškec 2012: 135). In the western necropolises of Ptuj (*Po-
etovio*), this percentage is 18.17% (of the 787 discovered
graves, coins were detected in 143) (cf. Istenič 2000: 14-
259). In ancient Singidunum, this percentage is 12.59%
(of the 270 discovered graves, coins were detected in 34)
(cf. Simić 1997: 46; Pop-Lazić 2002: 19-39). In the case of
the last three necropolises, the given percentages should
be interpreted with some caution due to the deficient
and ambiguous documentation from earlier excavations,
which subsequent researchers encountered in the pro-
cess of publishing the necropolises.

9 The calculations presented in Graphs 2–4 were obtained
based on the preserved and processed coins from graves
(cf. *supra* ref. 6-7).

Grafikon/Graph 1 - Procentualna zastupljenost novca u grobovima/Percentages of coins in graves.

Grafikon/Graph 2 - Procentualna zastupljenost novca (carskog i provincijskog) iz grobova po vekovima/Percentage of coins (imperial and provincial) from graves according to century.

zaključiti da je običaj stavljanja novca u grob bio na Viminacijumu poštovan samo od dela populacije ili približno njene trećine.

ZASTUPLJENOST CARSKOG I PROVINCISKOG NOVCA U GROBOVIMA

Poređenjem ukupne zastupljenosti carskog i provincijskog kovanja koji potiču iz grobova, po vekovima, dobijamo da je u najvećoj meri zastupljen novac II, potom I, III i u maloj meri IV veka (Grafikon 2).⁹ Međutim, ako poredimo odvojeno

emerges (Graphs 3 and 4). With regard to imperial coinage, the percentage ratios for the 1st, 2nd and 4th centuries remain almost the same, whereas a significant difference is observed in provincial coinage, particularly in the 3rd century. The average incidence of 3rd century coins of 11.82% (Graph 2) rises to 72.44%, if provincial coinage alone is considered, while with imperial, it drops from the average to 3.64% (Graphs 3 and 4).

The aforementioned calculations once again confirm a well known fact concerning the deficiency of bronze coins from the Roman mint in circulation in Upper Moesia during the first half of the 3rd century. The same, rather less pronounced, situation was also observed in other Balkan provinces: both Pannonias and Dalmatia, to a lesser extent in Noricum and in the area south and southwest of Emona, belonging to Italy. In the Lower Moesia, provincial coin issues prevail in cir-

⁹ Izračuni u Grafikonima 2-4 izvedeni su na osnovu sačuvanih i obrađenih primeraka novca iz grobova (cf. *supra* ref. 6-7).

carsko i provincijsko kovanje i njihovu procentualnu zastupljenost po vekovima, dobijamo nešto drugačiju sliku (Grafikon 3, 4). Što se tiče carskog kovanja, procentualni odnosi ostaju približno isti za I, II i IV vek, ali kod provincijskog se zapaža velika razlika naročito u III veku. Prosečna zastupljenost novca III veka 11,82% (Grafikon 2), narasta na 72,44% ukoliko posmatramo samo provincijsko kovanje, dok kod carskog sa proseka pada na 3,64% (Grafikoni 3-4).

Navedeni izračuni iznova potvrđuju poznatu činjenicu o pomankanju bronzanog novca rimske kovnice u opticaju tokom prve polovine III veka u Gornjoj Meziji. Ista, nešto slabije izražena, pojava zabeležena je i u drugim balkanskim provincijama: obe Panononije i Dalmaciji, manje u Noriku i na području južno i jugozapadno od Emone, koje je pripadalo Italiji. U Donjoj Meziji emisije provincijskog novca preovlađuju u cirkulaciji u periodu od 161-244. godine i dosežu najveći procenat od 88,80% u vreme vladavine Gordijana III.¹⁰ Ovo pomankanje je bio i jedan od osnovnih razloga za otvaranje provincijske kovnice novca u Viminacijumu 239. godine i nešto kasnije 246. godine kovnice u Dakiji.¹¹ Na nekropoli Više grobalja pojavljuju se kovanja deset maloazijskih i balkanskih provincija sa ukupno 23 kovnice i 555 primeraka.¹² U daleko najvećoj meri zastupljeno

culiation in the period between 161 and 244 and reach a highest percentage of 88.80% during the reign of Gordian III.¹⁰ This shortage was one of the main reasons for the opening of a provincial mint in Viminacium in 239 and another, somewhat later, in 246, in Dacia.¹¹ At the necropolis of Više grobalja, coinage of ten Asia Minor and Balkan provinces appears, with a total of 23 mints and 555 coins.¹² The coinage of the Bithynian mint of Nicaea is by far the most dominant, followed by that of the Macedonian and Viminacium mints.¹³

10 In the area of the south-eastern Alpine region (Slovenia, southern Austria, western Hungary, western Croatia, the northern part of Istria and the north-eastern part of Italy) which, in ancient times, comprised a part of Italy, Noricum, Dalmatia and Upper Pannonia, in the period between 192 and 238, bronze coins from the eastern mints are present to a lesser extent (most of the specimens are of Nicaea, particularly in the eastern parts of the region, in Poetovio). The situation changed considerably after the opening of the two Balkan mints, in the period between 239 and 253. In this time, Viminacium coinage, in particular, accounted for a significant percentage of the circulation in the territory of the western Balkan provinces. This percentage amounts to: 7% in Noricum, 38% in Upper Pannonia and 58% in Lower Pannonia of all the coin finds. In Emona, the presence of Viminacium coinage was noted with 29%, in Celeia 16% and in Poetovio 43% of the total coin finds from this period (cf. Kos 1986: 107-110, ref. 47; Găzdac 2010: 103-106, Pl. L1-2).

11 Борић-Брешковић 1976: 8; Црнобрња 1981:5-6.

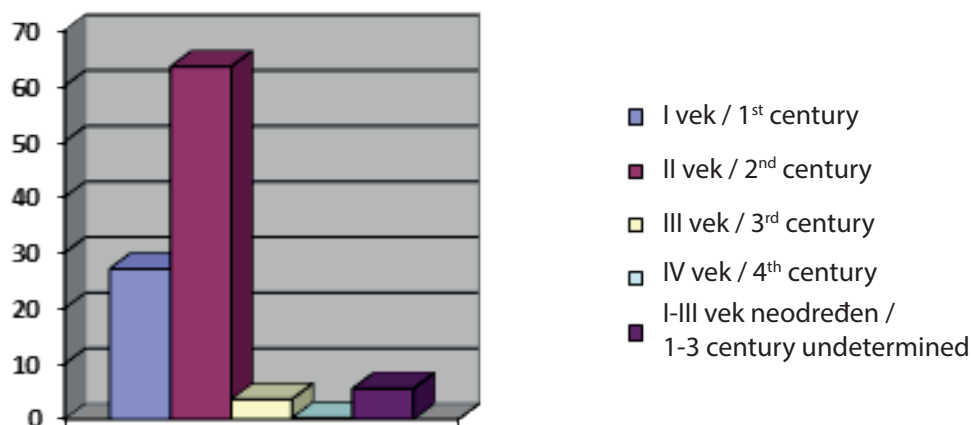

12 Cf. Table 1. The composition of the provincial coinage at the necropolis of Više Groblja, including finds from graves and the layers of the sacrificial areas, is as follows: Bithynia: Juliopolis (6 coins), Nicaea (290), Nicomedia (9), Phrygia: Laodicea (1), Cilicia: Isaura (2), Ionia: Ephesus (2), Mesopotamia: Carrhae (1), Thrace: Hadrianopolis (3), Mesembria (1), Pautalia (10), Perinthos (2), Philippopolis (2), Plotinopolis (1), Augusta Traiana (1), Macedonia: Autonomous (19), Apollonia (1), Edessa (1), Philippopolis (3), Stobi (31), Lower Moesia: Nicopolis on the Danube (5), Marcianopolis (1), Upper Moesia: Viminacium (59) and Dacia: Sarmizegetusa (4) (cf. Graph 12). To this number should be added the 48 coins where it was impossible to determine the provincial mint, along with the 52 badly damaged specimens which most likely belong to the provincial coinage of the 2nd-3rd century. For the specimens from the mints of Lower Moesia and Thrace, cf. Vojvoda 2011a: 139-152.

13 At the necropolis of Više grobalja, in graves and the layers of the sacrificial areas, a total of 290 coins from the Ni-

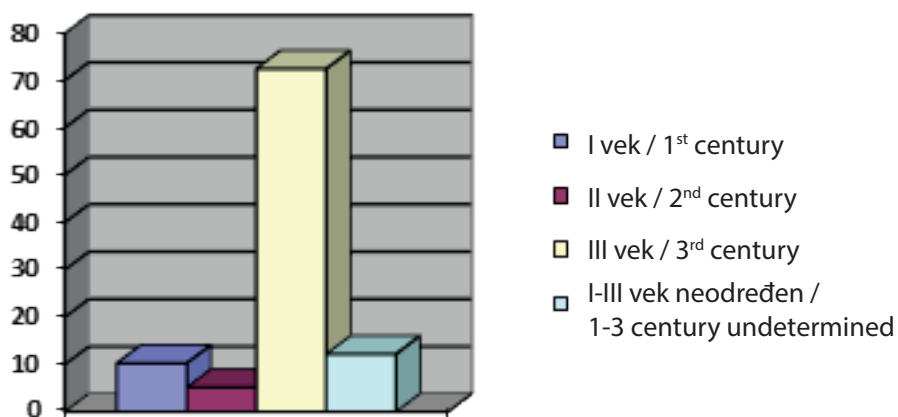

10 Na području jugoistočnog alpskog regiona (Slovenija, južna Austrija, zapadna Mađarska, zapadna Hrvatska, severni deo Istre i severoistočni deo Italije) koji je u antičko vreme zahvatao deo Italije, Norika, Dalmacije i Gornje Panonije, u periodu od 192.-238. godine prisustvo bronzanog novca istočnih kovnica zabeleženo je u manjoj meri (najviše je primeraka Nikeje i to u istočnim delovima regiona, u Ptuju). Situacija se je znatno promenila nakon otvaranja dve balkanske kovnice, i u periodu od 239-253. godine posebno viminacijumsko kovanje zauzima značajan procenat u cirkulaciji na području zapadnih balkanskih provincija. Ovaj procenat iznosi: 7% u Noriku, 38% u Gornjoj Panoniji i 58% u Donjoj Panoniji od svih nalaza novca. U Emoni je zabeleženo prisustvo viminacijumskih kovanja sa 29%, u Celju sa 16%, Ptuju sa 43% od svih nalaza novca iz ovog perioda (cf. Kos 1986: 107-110, ref. 47; Găzdac 2010: 103-106, Pl. L1-2).

11 Борић-Брешковић 1976: 8; Црнобрња 1981:5-6.

12 Cf. Tab. 1. Sastav provincijskog kovanja na nekropoli Više groblja, uključujući nalaze iz grobova i sloja, je sledeći: Bitinija: Juliopolis (6 kom.), Nikeja (290 kom.), Nikomedija (9 kom.), Frigija: Laodikeja (1 kom.), Kilikija: Isaura (2 kom.), Jonija: Efes (2 kom.), Mesopotamija: Karhe

Grafikon/Graph 3 - Procentualna zastupljenost carskog kovanja iz grobova po vekovima/Percentage of imperial coinage from graves according to century.

Grafikon/Graph 4 - Procentualna zastupljenost provincijskog kovanja iz grobova po vekovima/Percentage of provincial coinage from graves according to century.

je kovanje bitinijske kovnice Nikeje, potom makedonskih i viminacijumske kovnice.¹³ Od 555 pri-

(1 kom.), Trakija: Hadrianopolis (3 kom.), Mesembrija (1 kom.), Pautalija (10 kom.), Perint (2 kom.), Filipolis (2 kom.), Plotinopolis (1 kom.), Augusta Trajana (1 kom.), Makedonija: Autonomno (19 kom.), Apolonija (1 kom.), Edesa (1 kom.), Filipolj (3 kom.), Stobi (31 kom.), Mezija Inferior: Nikopolis na Dunavu (5 kom.), Markianopolis (1 kom.), Gornja Mezija: Viminacium (59 kom.) i Dakija: Sarmizegetuza (4 kom.) (cf. Grafikon 12). Ovom broju treba dodati i 48 primeraka kod kojih je bilo nemoguće utvrditi o kojoj se provincijskoj kovnici radi i još teško oštećena 52 primerka koji najverovatnije pripadaju provincijskom kovanju 2.-3. veka. Za primerke donjomezijskih i tračkih kovnica cf. Vojvoda 2011a: 139-152.

¹³ Na nekropoli Više grobalja, ukupno u grobovima i u sloju, konstatovano je 290 primeraka kovnice Nikeje (od čega čak 195 pripada emisijama Aleksandra Severa). To čini 10,59% od ukupno obrađenog novca sa nekropole

Of 555 specimens of provincial coins, 154 were discovered in graves. The period from the 1st

caean mint were noted (195 of which belong to the issues of Alexander Severus). This represents 10.59% of all the processed coins from the necropolis (2736) and 52.25% of the provincial coin finds (555) (cf. Table 1). Of 290 coins, 64 were discovered in graves. This large incidence, particularly those of the issues of Severus Alexander and then of Gordian III, along with the lack of bronze coins in circulation can, however, be linked to their military campaigns to the east, against the Persians. At the same time, the position of Viminacium plays a vital role as a military and administrative centre, located at an important point on the crossroads through which military units passed from the west on their way to the east and vice versa. For specimens of the Nicaean mint from the necropolis of Više grobalja, cf. Vojvoda 2011: 243-256; Vojvoda 2013: 155-196; for specimens of the mint of Stobi, cf. Borić-Brešković 2011: 423, ref. 48.

meraka provincijskog kovanja, 154 ih je pronađeno u grobovima. Periodu od I veka do 239. godine i otvaranja kovnice u Viminacijumu, pripadaju sledeći primerci: Juliopolis: A. Sever (1 kom.); Nikeja: A. Pije (1), Karakala (2), Elagabal (1), A. Sever (41 + 5?), J. Mamaea (3); Nikomedija: A. Sever (3); Laodikeja: J. Domna (1); Isaura: Faustina I (2); Efes: Karakala (1); Pautalija: M. Aurelije (1); Apolonija: Komod (1); Autonomno makedonsko kovanje: Klaudije (1), Neron (4), Domicijan (3), M. Aurelije (1), ? (3); Stobi: Vespazijan (1), S. Sever (3), J. Domna (1), Karakala (5), Geta (1); Nikopolis na Dunavu: Plautila (1), Elagabal (1); kovnica nepozanta (12). Periodu od 239. do 254/255. godine pripadaju sledeći primerci: Juliopolis: Gordijan III (1); Nikeja: Gordijan III (9), Trankvilina (1), H. Etruscila (1); Hadrianopolis: Gordijan III (1); Mesembrija: Filip I (1); Viminacijum: Gordijan III (5), Filip I (2), Filip II (1), Hostilijan (1), T. Gal (7), Emilijan (1); Dakija: T. Decije (1), Voluzijan (1). Kod 21 primeraka nesigurni su kako period tako i kovnica (Grafikon 11).

Analiza provincijskog novca na teritoriji Gornje Mezije i njeno poređenje sa nalazima iz provincija u okruženju, u velikoj meri doprinosi sticanju saznanja o putevima cirkulacije novca između maloazijskih, centralnih i zapadnih balkanskih provincija. Što nalazi sa viminacijumskih nekropola, svojim velikim uzorkom, u znatnoj meri omogućuju. Poredeći rezultate sa nekropole Više grobalja i nekoliko panonskih, te emonske nekropole, zapaža se osetna razlika u zastupljenosti provincijskog kovanja. Što je još jedan od parametara koji nam ukazuju na granice cirkulacije provincijskog novca u Carstvu. Naime, provincijska kovanja su u mnogo većoj meri zastupljena u Trakiji, Gornjoj i Donjoj Meziji nego u obe Panonije i dalje za Zapad.

Jeno Fic (J. Fitz) u jednoj svojoj studiji, analizirajući numizmatičke nalaze sa nekoliko nekropola u

(2736) i 52,25% od provincijskog (555) (cf. Tabela 1). Od 290 primeraka, 64 je pronađeno u grobovima. Ova velika zastupljenost, naročito emisija Aleksandra Severa i potom Gordijana III, pored činjenice da je nedostajalo bronzanog novca u optičaju, s druge strane može se dovesti u vezu sa njihovim vojnim pohodima na istok protiv Persijanaca. Pri tome, značajnu ulogu ima položaj Viminacijuma kao vojnog i administrativnog centra i važnog punkta na raskrsnici puteva, kroz koji su prolazili vojni odredi sa zapada na putu za istok i obrnuto. Za primerke kovnice Nikeje sa nekropole Više grobalja cf. Vojvoda 2011: 243-256; Vojvoda 2013: 155-196; za primerke kovnice Stobi, cf. Borić-Brešković 2011: 423, ref. 48.

century to 239 and the opening of the mint in Viminacium comprises the following specimens: Juliopolis: Severus Alexander (1 coin); Nicaea: A. Pius (1), Caracalla (2), Elagabalus (1), Severus Alexander (41 + 5?), J. Mamaea (3); Nicomedia: Severus Alexander (3); Laodicea: J. Domna (1); Isaura: Faustina I (2); Ephesus: Caracalla (1); Pautalia: M. Aurelius (1); Apollonia: Commodus (1); Autonomous Macedonian coinage: Claudius (1), Nero (4), Domitian (3), M. Aurelius (1), ? (3); Stobi: Vespasian (1), S. Severus (3), J. Domna (1), Caracalla (5), Geta (1); Nicopolis on the Danube: Plautilla (1), Elagabalus (1); an unidentified mint (12). The period from 239 to 254/255 comprises the following specimens: Juliopolis: Gordian III (1); Nicaea: Gordian III (9), Tranquillina (1), H. Etruscilla (1); Hadrianopolis: Gordian III (1); Mesembria: Philip I (1); Viminacium: Gordian III (5), Philip I (2), Philip II (1), Hostilian (1), T. Gallus (7), Aemilian (1); Dacia: T. Decius (1), Volusian (1). In 21 specimens, both the period and the identity of the mint are uncertain (Graph 11).

The analysis of the provincial coins in the territory of Upper Moesia and the comparison with the finds from the neighbouring provinces largely contribute to gaining an insight into the routes of coin circulation between the provinces of Asia Minor and those of the central and western Balkans, which the necropolises of Viminacium enable, to a great degree, by providing a considerable sample. Comparing the results from the Više grobalja necropolis with several Pannonian and the Emonian necropolis, a difference is apparent in the incidence of provincial coinage, which is an additional parameter that indicates the boundaries of provincial coin circulation in the Empire. Specifically, provincial coinage is much more prevalent in Thrace and Upper and Lower Moesia than in both Pannonias and further to the west.

Jeno Fitz, in one of his studies, by analysing numismatic finds from several necropolises in Pannonia (Brigetio, Intercisa, Savaria, Sopiana, etc.) and the Emonian necropolises, provides data with regard to the incidence of provincial coinage at these necropolises. In the period between 193 and 238, the number of provincial coins is as follows: Brigetio: Severus Alexander (3 coins.); Intercisa: Septimius Severus (1), Elagabalus (2), Severus Alexander (2). For the period between 238 and 260, the only provincial coinage that Fitz mentions is that of Viminacium, which exhibits the following ratios at the necropolises: Emona: Philip I (1), Trajan Decius (1); Brigetio: Gordian III

Panoniji (Brigetio, Intercisa, Savaria, Sopianae, itd) i Emonskih nekropola, daje podatke o zastupljenosti provincijskog novca na ovim nekropolama. U periodu od 193. do 238. godine pojavljuje se sledeći broj primeraka provincijskog kovanja: Brigetio: Aleksandar Sever (3 kom.); Intercisa: Septimije Sever (1 kom.), Elagabal (2), Aleksandar Sever (2). Za period od 238. do 260. godine Fic navodi kao provincijsko kovanje jedino viminacijumsko, i to u sledećim odnosima na nekropolama: Emona: Filip I (1), Trajan Decije (1); Brigetio: Gordijan III (4), Filip I (3), Trajan Decije (2), Trebonijan Gal (2); Intercisa: Gordijan III (2+8), Filip I (1+18), Trajan Decije (2+9), Trebonijan Gal (1+12) + Emilijan (2); Sopianae: Gordijan III (3 kom.), Trajan Decije (1 kom.).¹⁴ Na zapadnim Ptujskim nekropolama su samo u jednom grobu pronađena provincijska kovanja: Viminacijum: Filip I (1 kom.), Otacilija Severa ili Herenija Etruscila ? (1 kom.), Dakija: Voluzijan (1 kom.).¹⁵ U Singidunumu su tokom zaštitnih arheoloških istraživanja 1989-1990. godine otkrivena 93 groba, u kojima je pronađen 21 primerak novca. Od tog broja pet primeraka pripada provincijskim kovanjima: Mesembrija: Geta (1 kom.); Filipopolj: Karkala (1 kom.); Nikeja: Aleksandar Sever (1 kom.), Gordijan III (1 kom.); Viminacijum: Filip I (1 kom.).¹⁶ Preostali otkriveni grobovi sa područja Singidunuma, do ukupnog broja od 270,¹⁷ publikovani su u posebnoj studiji.¹⁸ Treba imati u vidu da od ovih 177 grobova, skoro trećinu treba isključiti iz statističkih izračuna, zaradi nedostatka dokumentacije.¹⁹ Stoga podatak, o samo jednom primerku viminacijumskog provincijskog kovanja (Filip II), treba uzeti sa ozbiljnom rezervom.²⁰

(4), Philip I (3), Trajan Decius (2), Trebonianus Gallus (2); Intercisa: Gordian III (2+8), Philip I (1+18), Trajan Decius (2+9), Trebonianus Gallus (1+12) + Aemilian (2); Sopianae: Gordian III (3), T. Decius (1).¹⁴ At the western necropolises of Poetovio, provincial coinage was discovered in only one grave: Viminacium: Philip I (1), Otacilia Severa or Herennia Etruscilla? (1), Dacia: Volusian (1).¹⁵ In the course of the rescue archaeological investigations conducted at Singidunum in 1989–1990, 93 graves were discovered, containing 21 coins, 5 of which belong to provincial coinage: Mesembria: Geta (1); Philippopolis: Caracalla (1); Nicaea: Severus Alexander (1), Gordian III (1); Viminacium: Philip I (1).¹⁶ The remainder of the Singidunum graves, giving a total of 270 discovered graves,¹⁷ were published in a separate study.¹⁸ It should be noted that almost a third of the 177 graves had to be excluded from the statistical calculations, due to deficient documentation.¹⁹ Thus, the data with regard to a single existing specimen of Viminacium provincial coinage (Philip II) should be considered only with serious reservations.²⁰

14 Fitz 1980: 29-31, Tab. C-D. Za period od 193. do 238. godine. Fic ne navodi o kojim se provincijskim kovnicama radi, već ih naziva skupno »Colonialist«. Ficovi podaci za Intercisu nalaze se u zagradi ispred »+«. Noviji podaci prikazani su iza »+« a podrazumevaju i dva primerka Emilijana (cf. Găzduc 2010: catalogue of site finds Pannonia Inferior: 11-12).

15 Istenič 2000: 71, Grob 185.

16 Simić 1997: 46.

ZASTUPLJENOST NOVCA RAZLIČITIH NOMINALA U GROBOVIMA

Zastupljenost pojedinih nominala u grobovima, takođe pruža uvid u ulogu koju je imao novac u pogrebnim ritualima. Bronzani primerci, uključujući i provincijsko kovanje, zastupljeni su sa 96,62%, a denari i antoninijani sa 3,38% (Grafikon 5). Najčešći nominali su dupondijusi i asi koji se javljaju u 84,32% slučajeva, sledi provincijsko kovanje sa 10,65%, denari sa 2,14%, antoninijani sa 1,24%, sestercijusi sa 1,17% i kvadransi sa 0,48% (Tabela 4). Posmatrano po vekovima, prisustvo srebrnog novca u grobovima narasta postepeno od I veka (4 kom.) preko II veka (9 kom.) do III veka (31 kom.: 14 denara i 17 antoninijana). Slične odnose u zastupljenosti nominala pokazuju i nekropole u Brigetiju, Intercisi, Ptuju i Emoni, sa jedinom razlikom u manjoj zastupljenosti provincijskog kovanja.²¹ Ovakva slika poklapa se i sa tvrdnjama antičkih izvora da se u pogrebnim ritualima koristio novac niske vrednosti,²² o čemu će biti više reči u zaključnom razmatranju.

21 Cf. prethodni odeljak u ovom radu; Fitz 1980: 25-36, Tab. A-F; Găzdac-Alföldy, Găzdac 2009: 164-167, Fig. III-IV.

22 Stevens 1991: 216-218 sa navedenim izvorima.

INCIDENCE OF COINS OF DIFFERENT DENOMINATIONS IN GRAVES

The incidence of certain denominations in graves provides further insight into the role of coins in funerary rituals. Bronze specimens, including provincial coinage, make up 96.62%, with denarii and antoniniani representing 3.38% (Graph 5). The most common denominations are dupondii and asses, occurring in 84.32% of cases, followed by provincial coinage with 10.65%, denarii with 2.14%, antoniniani with 1.24%, sestertii with 1.17% and quadrantes with 0.48% (Table 4). When observed by century, the presence of silver coins in graves gradually increases from the 1st century (4 coins), through the 2nd (9 coins) to the 3rd century (31 coins: 14 denarii and 17 antoniniani). Comparable denomination ratios can also be seen at the necropolises of Brigetio, Intercisa, Poetovio and Emona, the only difference being a smaller proportion of provincial coinage.²¹ Such a picture is also consistent with assertions from ancient sources stating that coins of low value were used in funerary rituals,²² which will be discussed in more detail in the conclusion.

21 Cf. the previous section of this work; Fitz 1980: 25-36, Tab. A-F; Găzdac-Alföldy, Găzdac 2009: 164-167, Fig. III-IV.

22 Stevens 1991: 216-218 with cited sources.

BROJ NOVACA KAO PRILOGA U POJEDINAČNIM GROBOVIMA I NJIHOV POLOŽAJ U ODNOSU NA POKOJNIKA

U pogledu zastupljenosti broja primeraka novca u pojedinačnim grobovima, dobili smo sledeću sliku: u 621 grobu sa inhumiranim pokojnicima pronađeno je ukupno 710 primeraka novca; od toga 571 grob sadrži jedan novac, 39 grobova dva, pet grobova tri, jedan grob četiri, tri groba sedam, jedan grob osam i jedan grob 13 primeraka novca. Grobovi sa kremiranim pokojnicima, njih ukupno 725 sadrži 885 primeraka novca, od toga: 595 grobova po jedan novčić, 105 groba po dva, 21 grob po tri, tri groba po četiri i jedan grob po pet novčića (Tabela 5, Grafikon 6).²³

Kao što se iz Tabele 5 i Grafikona 6 jasno vidi, najčešće se kao prilog u grobovima pojavljuje jedan primerak novca, kod oba načina sahranjivanja (91,95% u G i 82,07% u G1).²⁴ U slučaju dva, tri i četiri novca u grobu osetno je veća zastupljenost kod kremiranih pokojnika u odnosu na inhumirane (14,49 – 6,28%, 2,90 – 0,80% i 0,41 – 0,16%). Postoje pretpostavke da se veći broj novčića pojavljuje u istim grobovima sa kremacijom zato što bi se radilo o većem broju sahranjenih individua. Ovo se naravno može dokazati jedino u slučajevima kada raspoložemo antropološkom analizom ostataka kremiranih pokojnika na nekropoli.²⁵ Sa

23 Izračuni u Tabeli 4 i Grafikonu 5 izvedeni su na osnovu ukupnog broja pronađenih primeraka u grobovima (1595), a na osnovu terenske dokumentacije; cf. *supra* ref. 2-3.

24 Prilikom analize broja primeraka novca u grobovima na nekropolama Brigetija, autori nisu posebno navodili podatke za inhumacije i kremacije, već su ih davali zbirno (459 grobova (ihumacija i kremacija) je istraženo na tri nekropole, dok je novac kao prilog otkriven u 153 groba). Stoga su svi njihovi dalji izračuni bazirani na ovoj osnovi. Po tome, u Brigetiju zastupljenost jednog novca u grobu iznosi 91% (cf. Găzduc-Alföldy, Găzduc 2009: 162-163, Fig. I-II). U primeru nekropole Više grobalja ovaj procenat bi, posmatrano zbirno kremacije i inhumacije, iznosio 87,07%. Mišljenja smo da je za analize primerenija podela na inhumacije i kremacije, jer se istovremeno vide razlike i između dva načina sahranjivanja, te smo zato izabrali ovaj princip.

25 Găzduc-Alföldy, Găzduc 2009: 163, ref. 7. Autori navode primer nekropole Solymár, gde je u tri groba sa kremacijom, antropološkom analizom, konstatovano dve osobe i

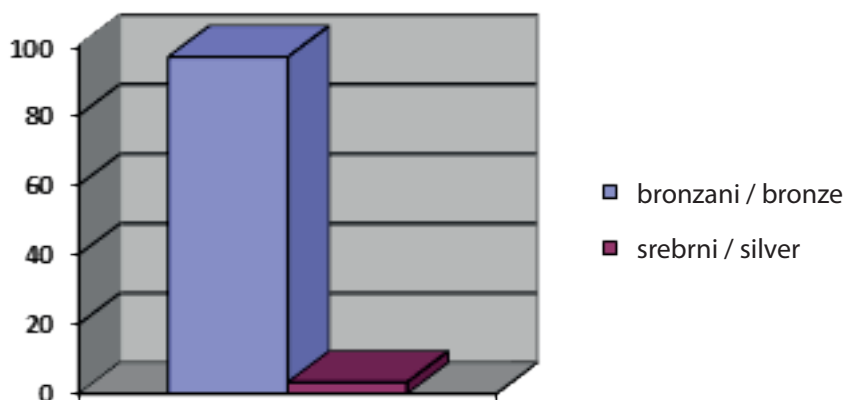

NUMBER OF COINS AS GRAVE GOODS IN INDIVIDUAL GRAVES AND THEIR POSITION IN RELATION TO THE DECEASED

In terms of the number of coins found in individual graves, the following picture was obtained: in 621 graves with inhumations, a total of 710 coins were discovered; 571 graves contained a single coin each, 39 graves – 2, five graves – 3, one grave – 4, three graves – 7, one grave – 8 and one grave – 13 coins. A total of 725 graves with cremations contained 885 coins: 595 graves contained a single coin each, 105 graves – 2, 21 graves – 3, three graves – 4 and one grave – 5 coins (Table 5, Graph 6).²³

As shown in Table 5 and Graph 6, the most common inventory in graves of both burial types is a single coin (91.95% in G and 82.07% in G1).²⁴ In the cases of two, three and four coins within a grave, the incidence is considerably greater in cremations compared to inhumations (14.49–6.28%, 2.90–0.80% and 0.41–0.16%). There are assumptions that a greater number of coins occur in graves with cremations as there would have been a larger number of buried individuals. This, of course, can only be proved when the anthropological analysis of the cremated human remains

23 The calculations presented in Table 4 and Graph 5 were derived from the total number of discovered coins in the graves (1595), obtained from the fieldwork documentation; cf. *supra* ref. 2-3.

24 In the process of analysing the number of coins in graves at the necropolises of Brigetio, the authors did not separate the data for inhumations and cremations, instead they were presented collectively (459 graves (inhumations and cremations) were explored at three necropolises, whereas coins were discovered in 153 graves). Accordingly, all further calculations have this starting point. Based on this, at Brigetio, the incidence of a single coin in a grave amounts to 91% (cf. Găzduc-Alföldy, Găzduc 2009: 162-163, Fig. I-II). In the case of the Više grobalja necropolis, this percentage would amount to 87.07%, if cremations and inhumations were observed collectively. It is considered that the division into inhumations and cremations is more appropriate for analyses, since the differences between the two forms of burial are simultaneously shown and, consequently, this principle was chosen.

Grafikon/Graph 5 - Procentualna zastupljenost srebrnog i bronzanog novca (carskog i provincijskog) u grobovima/Percentage of silver and bronze coins (imperial and provincial) in graves.

nekropole Više grobalja do sada je publikovano 530 grobova kremiranih pokojnika, sa 577 sahrane, za koje postoje antropološke analize ostataka.²⁶ Od ukupnog broja sahrana, antropološkom analizom izdvojeno je: 36 dečjih sahrana (kremiranih i inhumiranih u grobovima sa kremacijom, 6,24%), 127 muškaraca (22%), 95 žena (16,46%), 135 individua kod kojih pol nije bilo moguće utvrditi (23,40%) i 184 sahrane bez antropoloških elemenata ili gde nije bilo moguće utvrditi broj individua (31,90%). U 42 groba sahranjeno je više osoba: 38 grobova sadrži ostatke dve osobe, 3 groba ostatke 3 i jedan grob ostatke 4 osobe. Od 38 grobova, kod kojih je konstatovano po dve sahranjene osobe, samo u pet slučajeva zabeleženo je prisustvo dva novčića. U grobu sa četiri individue, zabeležen je jedan primerak novca, a od tri groba sa po tri individue, samo u jednom je pronađen jedan novčić.²⁷ Iz navedenog većeg uzorka proizilazi da razlog, za duplo veću zastu-

at the necropolis is available.²⁵ From the necropolis of Više grobalja, 530 graves with cremations, containing 577 burials, have thus far been published using the available anthropological analyses of the remains.²⁶ Of the total number of burials, the anthropological analysis distinguished the following: 36 children's burials (cremations and inhumations placed in cremation graves, 6.24%), 127 males (22%), 95 females (16.46%), 135 individuals whose sex could not be determined (23.40%) and 184 burials without anthropological elements or where it was not possible to ascertain the number of individuals (31.90%). In 42 graves, two or more individuals were buried: 38 graves contain the remains of two individuals, three graves – 3 and one grave – 4 individuals. Of the 38 graves with two buried individuals noted in each, the presence of two coins was recorded only in five cases. In the grave with four individuals, a single coin was noted, whereas in the graves with three individuals only a single coin was discovered in one grave.²⁷ The aforementioned large

u kojima je pronađen samo po jedan primerak novca.

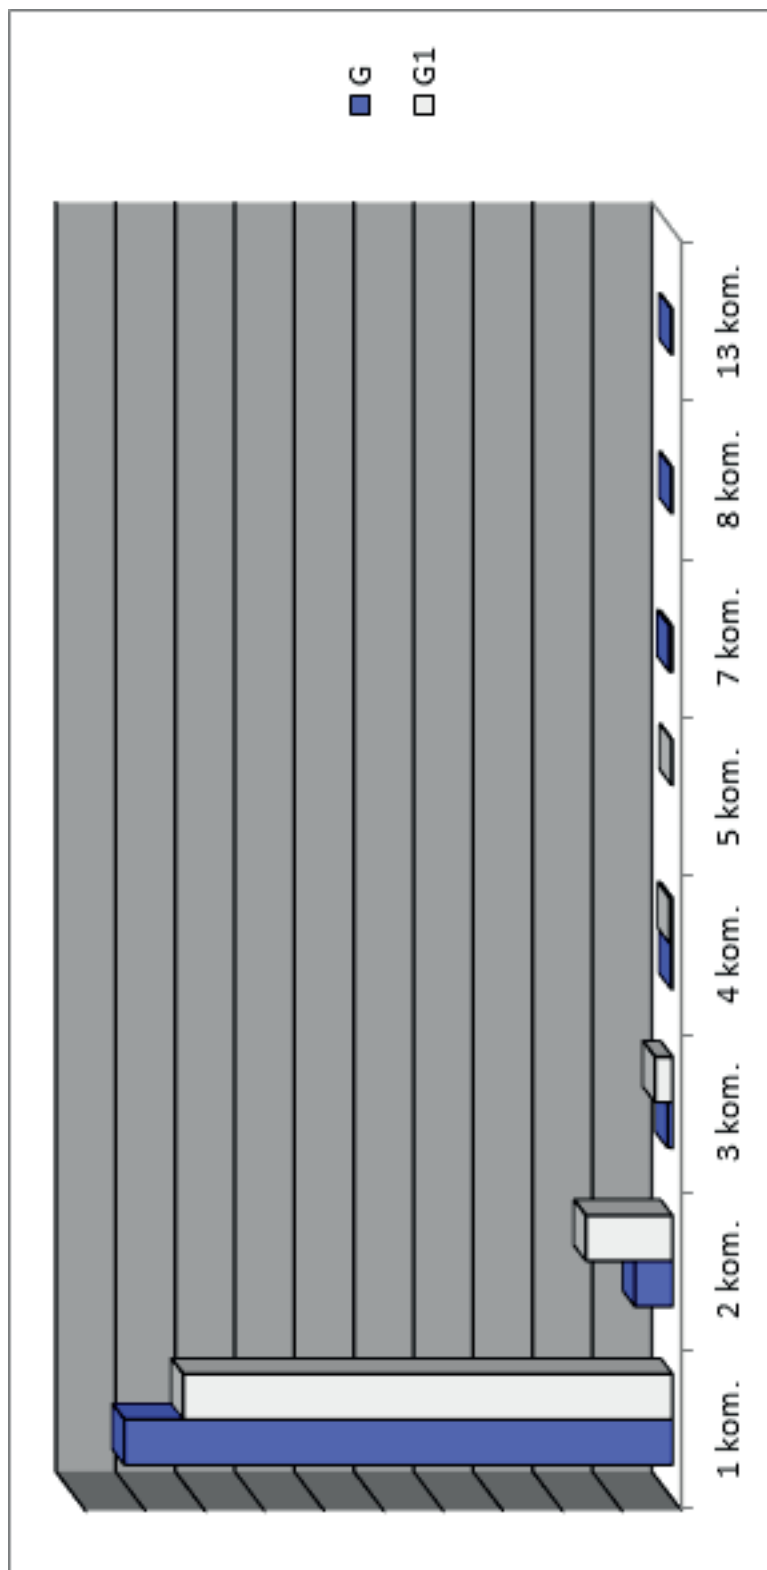

26 Зотовић, Јордовић 1990: 77-110; Korać, Golubović 2009: 25-259.

27 U grobu sa četiri sahranjene individue (G1-291): dve odrasle osobe (muškarac i žena) i dva inhumirana deteta, zabeleženo je prisustvo jednog novčića (cf. Korać, Golubović 2009: 38-39). Kod grobova sa tri sahranjene osobe (G1-191): muškarac, dete između 12-15 godina i inhumirano dete u prvoj godini života, jedan novčić; (G1-214): muškarac, žena i inhumirano novorođenče, bez novca (cf. Зотовић, Јордовић 1990: 99, 102); (G1-407): odrasla osoba neodređenog pola, muškarac i inhumirano novorođenče, bez novca (cf. Korać, Golubović 2009: 149-150).

25 Găzdac-Alföldy, Găzdac 2009: 163, ref. 7. The authors cite the example of the necropolis of Solymár where in three graves with cremations, by means of anthropological analysis, it was ascertained that each contained two individuals, along with a single coin.

26 Зотовић, Јордовић 1990: 77-110; Korać, Golubović 2009: 25-259.

27 In the grave with four buried individuals (G1-291): two adults (one male and one female) and two inhumed children, a single coin was recorded (cf. Korać, Golubović 2009: 38-39). In the graves with three buried individuals

Grafikon/Graph 6 - Procentualna zastupljenost novca prema broju komada u pojedinačnom grobu (G i G1)/ Percentage of coins according to the number in each grave (G and G1)

pljenost dva primerka novca u grobovima sa kremacijom u odnosu na inhumacije, ne može biti broj sahranjenih individua. Razlozi ostaju skriveni i verovatno ih treba tražiti u izvesnim verovanjima i ritualnim radnjama vezanim za sahranjivanje.

Pri analizi položaja novca u odnosu na pokojnika, bilo da se radi o jednom ili više primeraka u istom grobu, ograničeni smo na grobove sa inhumacijom. Mada je već primećeno, da su na istovremenim nekropolama Više grobalja i Pećine, grobni oblici i rituali veoma slični, te da se iste vrste priloga javljaju u kremacijama i inhumacijama. Kod grobova sa kremacijom zapaženo je da prilozima imaju raspored poput onoga u inhumacijama i da nakiti i metalni delovi odeće često prate zamišljeno telo pokojnika. Pored toga, grobne rake kremacija po svojim dimenzijama odgovaraju grobovima sa inhumiranim pokojnicima. Sve ovo upućuje da su, na dve najstarije nekropole Viminacijuma, obredi sahranjivanja spaljenih pokojnika bili zasnovani na tradiciji skeletnog sahranjivanja.²⁸

Pri definisanju položaja novca u grobovima opredelili smo se svedeni metod, koji je koristio Klark (Clarke).²⁹ Po njegovoj sistematizaciji postoji osam položaja: A – na/oko glave; B – u ustima; C – na/blizu desne ruke i u desnoj šaci; D – na/blizu torzoa; E – na/blizu leve ruke i u levoj šaci; F – na/blizu karlice; G – na/blizu desne noge; H – na/blizu l. noge. Ovoj sistematizaciji položaja dodali smo deveti (G/H – kod/između nogu/stopala) u slučajevima kada je novac pronađen između kolena ili potkolenica pokojnika ili gde na osnovu terenske dokumentacije nije bilo jasno pored koje noge je pronađen novac (Slika 1).

Analizirajući položaj novca u grobovima sa inhumiranim pokojnicima i sa jednim novcem kao prilogom, došli smo do sledećih podataka: od ukupno 571 groba položaj A zabeležen je u 149 slučajeva, B u 186, C u 19, D u 60, E u 19, F u 35, G u 5, H u 17 i G/H u 4. Ovome treba dodati i 77 grobova kod kojih nije bilo moguće utvrditi položaj priloga u grobu uglavnom zbog loše očuvanosti osteološkog materijala i činjenice da se radilo o grobovima dece najranijeg uzrasta (Grafikon 7).

Iz priloženog se može zaključiti da je u najvećem broju slučajeva grobova koji sadrže jedan primerak novca, taj novac bio postavljen u usta pokojnika (B - 32,60%). Sledi novac koji je bio po-

sample indicates that the reason for the number of incidences of two coins in graves with cremations to be twice as high as those in inhumations cannot be the number of buried individuals. The reasons remain obscure and should probably be sought in the beliefs and ritual activities pertaining to burials.

In analysing the position of coins in relation to the deceased, regardless of whether there are one or more coins in the same grave, we are restricted to the graves with inhumations. However, it has already been stated that the concurrent necropolises of Više grobalja and Pećine include grave forms and rituals that are very much alike and, accordingly, the same types of grave goods occur in cremations and inhumations. The graves with cremations were observed to have an alignment of grave goods similar to that in inhumations, along with jewellery and metal parts of garments that commonly follow the imaginary body line of the deceased. In addition, the dimensions of the grave pits with cremations correspond to those containing inhumated deceased. All of this suggests that the burial rituals in cremations at the two oldest necropolises of Viminacium were patterned on inhumation traditions.²⁸

In defining the position of coins in graves, a reduced method was opted for, as used by Clarke.²⁹ According to his systematisation, there are eight positions: A – on/around head; B – in mouth; C – on/near right arm and in right hand; D – on/near torso; E – on/near left arm and in left hand; F – on/near pelvis; G – on/near right leg; H – on/near left leg. This systematisation was supplemented with a ninth position (G/H – near/between legs/feet), in cases where coins were located between the knees or lower legs of the deceased or where, based on the fieldwork documentation, it was not clear next to which leg the coins were discovered (Fig. 1).

Analysing the position of coins in inhumation burials with grave goods comprising a single

(G1-191): a male, a child aged between 12 and 15 and an inhumated infant aged up to one year – a single coin; (G1-214): a male, a female and an inhumated newborn – no coin finds (cf. Зотовић, Јордовић 1990: 99, 102); (G1-407): an adult individual of undetermined sex, a male and an inhumated newborn – no coin finds (cf. Korać, Golubović 2009: 149-150).

29 Clarke 1979: 158.

stavljen na ili oko glave pokojnika (A - 26,10%). Proizilazi da je u 58,70% slučajeva novac kao prilog u grobu vezan za područje glave pokojnika. U zapaženom procentu novac je bio postavljan na grudni (D - 10,50%), a potom i na karlicu pokojnika (F - 6,12%). Novac koji je polagan blizu desne ili leve ruke zastupljen je istim procentom (C i E - 3,32%), dok je oko nogu prisutan u manjoj meri, pri tome, najviše oko leve noge (H - 2,97%).

Kod grobova sa inhumacijom koji su kao prilog imali dva novčića (39 grobova) javlja se veliki broj mogućih kombinacija, koje se u najvećem broju slučajeva pojavljuju samo jednom, te ne možemo govoriti o nekom pravilu. Samo u dva primera pojavljuje se ista kombinacija položaja (B-F i F-H) u tri groba i u četiri položaja (A-A, C-D, C-F i G/H-G/H) u dva groba. Kod 12 grobova nije bilo moguće utvrditi položaj iz istih razloga već navedenih kod grobova sa jednim novcem. Zapaža se da se bez obzira na brojne varijacije položaji A i B, u različitim kombinacijama, ponovo pojavljuju u najvećem broju slučajeva (10 grobova) (Tabela 6).

U pet grobova sa inhumiranim pokojnicima pojavljuje se tri novčića kao prilog. Zabeležene su sledeće kombinacije položaja nalaza novca u grobu: 1. A - A - A; 2. A - A - G/H; 3. G - H - H; 4. C - D - E; 5. F - F - F. Iz ovoga proizilazi da se u najvećem broju novac ponovo pojavljuje oko glave, potom oko nogu i u kombinaciji glava - noge. U jednom primeru su koncentrisani na karlicu i u jednom raspršeni od desne ruke, grudnog koša do leve ruke. Pri tome ni u jednom slučaju novac nije postavljen u usta pokojnika. U primeru jednog groba pojavljuje se 4 novčića kao prilog i svi su vezani za područje glave: A - A - A - B.

Samo u grobovima sa inhumacijom pojavljuje se 7, 8 i 13 novčića kao prilog i to u pet slučajeva. Ovi nalazi mogli bi se nazvati i manjim depozitima u zavisnosti od njihovog položaja u grobu. Izdvajaju se tri groba sa inhumiranim odraslim osobama koja sadrže po 7 novčića (G 545, G 1547 i G 1974C).³⁰ Sedam primeraka iz G 545 nisu nađeni na jednom mestu, već svaki za sebe, raspoređeni oko skeleta, pri tome ni jedan nije bio u ustima pokojnika. Četiri ih je bilo vezano za gornji deo tela (položaji D-D-D-C) a tri za predeo nogu (G-G-H). Radi se o denaru Marka Aurelija, asu Faustine mlađe, denaru Karakale kao cezara, tri Gali-

coin, the following data was obtained: of a total of 571 graves, position A was recorded in 149 cases, B in 186, C in 19, D in 60, E in 19, F in 35, G in 5, H in 17 and G/H in 4. In the case of 77 graves it was not possible to determine the position of grave goods in the grave, mainly due to the poor state of preservation of the osteological material and the fact that these were the graves of infants (Graph 7).

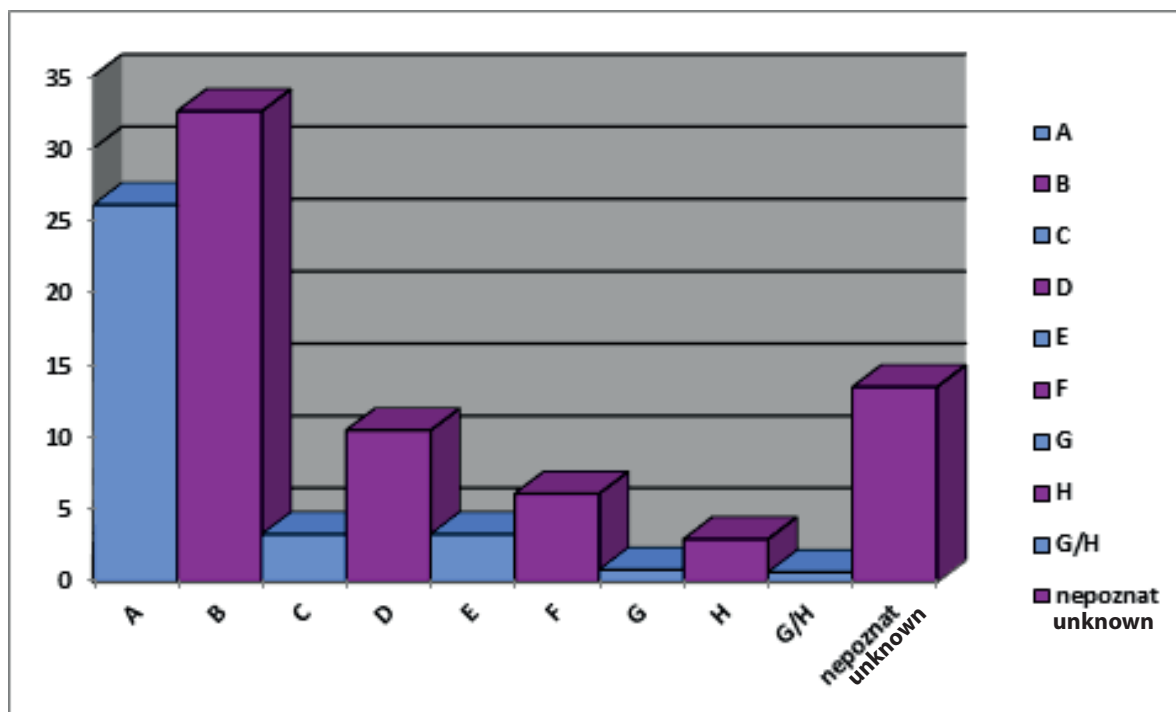

From the presented data it can be concluded that in most cases of graves that contain a single coin, it was placed in the mouth (B - 32.60%), followed by those where it was placed on or around the head of the deceased (A - 26.10%). Therefore, in 58.70% of cases, the inventory of coins in the grave relates to the region of the head. A noticeable percentage of coins was placed on the chest (D - 10.50%), followed by those laid on the pelvis of the deceased (F - 6.12%). The incidences of the coin deposited near the right or left arm both comprise the same percentage (C and E - 3.32%), whereas around the legs, it was present to a lesser degree and mostly concentrated around the left leg (H - 2.97%).

In inhumation burials with two coins in their inventory (39 graves), a great number of possible combinations occur, and in most cases only once, thus no pattern can be discerned. The same combination of positions appears only in two instances (B - F and F - H) in three graves, and in four positions (A - A, C - D, C - F and G/H - G/H) in two graves. In 12 graves it was not possible to determine the position, for the same reasons that have already been specified with regard to graves containing a single coin. It is apparent that regardless of the numerous variations of A and B positions, in different combinations, they occur in the majority of cases (10 graves) (Table 6).

In five inhumation burials, three coins occur in the inventory. The coins were recorded in the following position combinations in the grave: 1. A - A - A; 2. A - A - G/H; 3. G - H - H; 4. C - D - E; 5. F - F - F. Accordingly, the largest number of coins again appear around the head, then around the legs and then in a combination of head - legs. In one instance, they are concentrated on the pelvis and in another, scattered from the right arm, across the thorax to the left arm. At the same time, none of the cases had coins placed in the mouth of the deceased. In the case of one grave, there were 4 coins in the inventory and they all relate to the head region: A - A - A - B.

7, 8 and 13 coins occur as grave goods only

³⁰ Korać, Golubović 2009: 435-436 (skica groba, opis skeleta i nalaza za G 545). G 1547 i G 1974 su nepublikovani.

Grafikon/Graph 7 - Procenat zastupljenosti mesta nalaza novca u grobovima sa jednim novcem kao prilogom/Percentage of coin positions in graves with an inventory of one coin.

jenova i jednom Salonininom antoninijanu.³¹ Kod drugog primera (G 1547) svih sedam primeraka nađeno je zajedno, sa spoljne strane desne potkolenice (položaj G). Nažalost sačuvano je samo 3 primerka, i to: as Antonina Pija, i po jedan primerak provincijskog kovanja Aleksandra Severa (Nikeja) i Filipa I (Mesembrija).³² U slučaju trećeg primera (G 1974C) radi se o grobu sa 10 slobodno ukopanih odraslih individua, od kojih su samo dva imala priloge.³³ Pokojnik označen kao C imao

in 5 instances of inhumation burials. These finds could also be defined as small deposits, depending on their position in the grave. Three graves of inhumed adult individuals were distinguished, containing 7 coins each (G 545, G 1547 and G 1974C).³⁰ Seven coins from G 545 were not discovered in one place, but rather individually, arranged around the skeleton, whereby none of them was in the mouth of the deceased. Four related to the upper part of the body (positions D – D – D – C), and three to the region of the legs (G – G – H). These are a denarius of Marcus Aurelius, an as of Faustina II, a denarius of Caracalla as Caesar, three antoniniani of Gallienus and one of Salonina.³¹ In the second case (G 1547), all

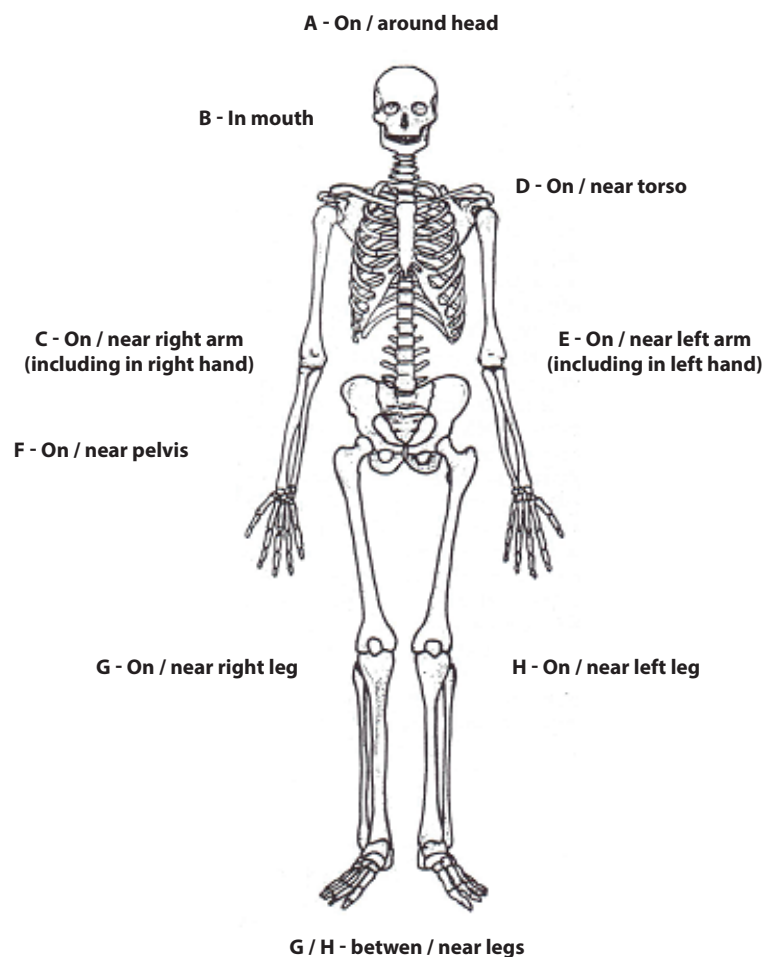

31 Grob 58 sa nekropole Abbeville-Homblières imao je 22 novčića postavljena po celoj dužini leve noge. U grobu 578 na nekropoli Bavai novac je bio položen u polukrugu oko glave. U oba slučaja radi se o nekropolama IV veka (cf. Gorecki 1975: 255). Običaj stavljanja većeg broja novčića u grob (11-31), najčešće u vrećicama oko pasa pokojnika, karakterističan je za vreme od druge polovine III i dalje kroz kasnu antiku (cf. Stivens 1991: 225-226, ref. 24-25, 27).

32 Kako se iz terenske dokumentacije može pretpostaviti među izgubljenih 4 primeraka nalazio se i jedan antoninijan. Što bi ukupno iznosilo 6 bronzanih i jedan srebrni primerak.

33 Pokojnik označen kao C imao je za prilog 7 novčića, a pokojnik I bronzani prsten. Ujedno to su jedini nalazi u

30 Korać, Golubović 2009: 435-436 (sketch of the grave, description of the skeleton and finds for G 545). G 1547 and G 1974 are unpublished.

31 Grave 58 from the necropolis of Abbeville-Homblières contained 22 coins arranged along the whole length of the left leg. In grave 578, at the necropolis of Bavay, coins were placed in a semicircle around the head. In both cases these are 4th century necropolises (cf. Gorecki 1975: 255). The custom of placing a large number of coins in a grave (11–31), most frequently in pouches around the waist of

1 Položaji A-H su preuzeti od Klarka (Clarke), dok je položaj G/H, ovom prilikom, dodat sistematizaciji.

2 Položaji A-H su preuzeti od Klarka (Clarke), dok je položaj G/H, ovom prilikom, dodat sistematizaciji.

je za prilog 7 novčića: kraj desne butne kosti (položaj G) nađen je jednom perforirani bronzani as iz vremena Kaligule (komemorativno kovanje za Agripu); kraj desnog kolena (položaj G) pronađeno je još 6 novčića: as Nerona, as Domicijana, antoninijan Gordijana III, dva primerka srednje bronzne Trebonijana Gala i jedan primerak Emilijana iz viminacijumske provincijske kovnice.

U neposrednoj blizini G 1547 otkriven je G 1560 koji je kao jedini prilog imao 8 novčića nađenih na jednom mestu, sa spoljne strane leve podlaktice (položaj E). Od 8 primeraka sačuvano je četiri: denar Komoda, jedan primerak provincijskog kovanja Nikeje Aleksandra Severa i dva Gordijana

ovom grupnom ukupu.

seven specimens were discovered together, on the outer side of the right lower leg (position G). Unfortunately, only 3 coins are preserved: an as of Antoninus Pius, and single specimens of the provincial coinage of both Severus Alexander (Nicaea) and Philip I (Mesembria).³² The third case (G 1974C) represents a grave with 10 adult individuals interred without a coffin, only two of which

the deceased, is characteristic for the period from the second half of the 3rd century and onwards, throughout Late Antiquity (cf. Stevens 1991: 225-226, ref. 24-25, 27).

³² As can be assumed, based on the fieldwork documentation, among the 4 lost coins was also an antoninianus. This would give a total of 6 bronze and one silver coin.

A – A (2 groba/graves)	A – B (1 grob/grave)	A – C (1 grob/grave)	A – F (1 grob/grave)	A – G/H (1 grob/grave)

Tabela/Table 6 – Zastupljenost kombinacija položaja nalaza novca u grobovima sa dva novčića kao priložima./Combinations of coins position in graves with two coins in inventory.

III. U jednom slučaju (G 1277B) zabeležen je nalaz 13 bronzanih novčića nađenih sa desne strane karlice pokojnika (položaj F) koji su prilikom nalaza bili spojeni međusobno.³⁴ Nažalost svi primerci su izgubljeni, tako da ne raspolažemo podacima o sastavu ovog malog depoa.

Sledi da su u navedenih pet grobova (3 sa 7 novčića, i po 1 grob sa 8 i 13 novčića) u tri novci pronađeni zajedno, u jednom grobu je jedan primerak položen posebno a ostali zajedno i u jednom grobu su svi novci bili postavljeni zasebno, oko skeleta. Kada su novci bili položeni zajedno, uključujući i primer sa jednim posebno i 6 komada zajedno, uglavnom su vezani za predeo karlice i nogu (G 1547, G 1974C, G 1277B), dok je u jednom primeru taj položaj povezan a rukom (G 1560). U svim slučajevima radi se o grobovima odraslih individua. U svojoj studiji Gorecki (Gorec-

contained grave goods.³³ The deceased labelled as C had grave goods consisting of 7 coins: next to the right femur (position G), a singly perforated bronze as from the time of Caligula was discovered (commemorating Agrippa); next to the right knee (position G), another 6 coins were detected: an as of Nero, an as of Domitian, an antoninianus of Gordian III, two coins of middle bronze of Trebonianus Gallus and a specimen of Aemilian from the provincial mint of Viminacium.

In the immediate proximity of G 1547, G 1560 was discovered with an inventory consisting solely of 8 coins, detected in one place, on the outer side of the left forearm (position E). Of 8 coins, four are preserved: a denarius of Commodus, a specimen of the Nicaean provincial coinage of Severus Alexander and two of Gordian III. In one instance (G 1277B), a find of 13 bronze coins was noted, which were located on the right side of the pelvis of the deceased (position F) and were, at

³⁴ G 1277 predstavlja grupnu sahranu tri slobodno ukopana pokojnika, od kojih je pokojnik označen kao B imao 13 novčića kao prilog. Pored pokojnika označenog kao C nalazio se crveno pečeni krčag, što predstavlja jedine nalaze u ovom grobu.

³³ The deceased labelled as C had an inventory comprising 7 coins, whereas the deceased labelled as I, had a bronze ring. These were the only finds in this group burial.

ki) je konstatovao istu situaciju vezanu za običaj polaganja novca u grobove sa inhumacijom, na nekropolama u oblasti između reka Rajne, Mozela i Some. U 23 primera je više novčića ležalo uz skelet, od toga u dva slučaja su bile vezane za gornji deo tela, u 8 slučajeva su nadjene u predelu pojasa i u 11 kukova i nogu. Gorecki je zaključio da su muškarci imali za pojaseve pričvršćene vrećice sa novcima, te su zato ovi mali depoi nalaženi u muškim grobovima u predelu pojasa. Žene, pak, nisu imale ovakve pojaseve, i novac je u njihovim grobovima polagan u kutije ili torbice, koje su postavljane oko ruku, pasa ili pri nogu.³⁵ Kako raspoložemo antropološkom analizom samo za publikovani G-545, ne možemo potvrditi ovu tezu u primeru nekropole Više grobalja.³⁶ Pored toga, kako se iz terenske dokumentacije da zaključiti u svim ostalim primerima gde je pronađeno od 7 do 13 novčića, na osnovu ostalih nalaza iz groba, ne možemo reći da su pokojnici imali pojaseve ili priložene kutije, jer nedostaju delovi ovakvih nalaza. Možemo, pak, pretpostaviti da se novac nalazio u vrećicama od tkanine ili kože koje su se raspale.

the time of discovery, joined to each other.³⁴ Unfortunately, all the coins have been lost so there is no available data with regard to the composition of this small hoard.

In three out of the five aforementioned graves (three with 7 coins, one with 8 and one with 13 coins) the coins were discovered together; in one grave a coin was placed separately while the others were clustered and in one grave all were laid separately around the skeleton. Where the coins were placed together, including the example with one separate and 6 together, they were mainly in the pelvic and leg region (G 1547, G 1974C, G 1277B), whereas in one example, the position related to the arm region (G 1560). All of these cases represent graves of adult individuals. In his study, Gorecki ascertained the same situation with regard to the custom of depositing coins in graves with inhumations at the necropolises in the region between the Rhine, Moselle and Somme rivers. In 23 cases, a number of coins were located along the skeleton. Of these, in two cases they related to the upper part of the body, in 8 cases they were discovered in the waist region and in 11, near the hips and legs. Gorecki concluded that males had pouches of coins attached to their belts and, for this reason, these small hoards were discovered in male graves in the region of the waist. Females, however, did not possess such belts and, in their graves, coins were deposited in boxes or small bags, placed around the arms, waist or by their legs.³⁵ As the anthropological analysis is available only for the published G 545, this thesis cannot be confirmed in the example of the Više grobalja necropolis.³⁶ Furthermore, as can be inferred from the fieldwork documentation, in all other instances where 7 to 13 coins were discovered, on the basis of other finds from the grave, it cannot be stated that the deceased possessed belts or deposited boxes, since parts of these finds are lacking. However, it can be assumed that coins were located in pouches made of cloth or leather, which had decomposed.

35 Gorecki 1975: 250, 255.

36 U grobu G-545 sahranjen je muškarac starosti do 45 godina (cf. Korać, Golubović 2009: 435).

34 G 1277 represents a group burial of three deceased interred without coffins, out of which the deceased labelled as B had 13 coins as grave goods. Next to the deceased labelled as C, there was a red, fired jug. These items were the only finds in this grave.

35 Gorecki 1975: 250, 255.

36 In grave G-545, a male aged up to 45 was buried (cf. Korać, Golubović 2009: 435).

GROBOVI SA VEĆIM BROJEM PRIMERAKA NOVCA – HRONOLOŠKI RASPON OD NAJSTARIJEG DO NAJMLAĐEG PRIMERKA

U svim slučajevima gde je zabeležen veći broj primeraka novca u grobu (7-8)³⁷ raspon od najstarijeg do najmlađeg se kreće od 50 – 100 godina, izuzev u slučaju G 1974C gde se javljaju primerci I (Kaligula/Neron/Domicijan) i III veka (Gordijan III/Trebonijan Gal/Emilijan) i gde bi taj raspon iznosio nešto preko 200 godina. Prisustvo novca I veka u grobovima III predstavlja ređu pojavu, ali nije izuzetak.³⁸ U konkretnom slučaju G 1974C, prisutan je bronzani novac Kaligule, koji je po svedočenju antičkih izvora, po njegovoj smrti, odlukom Senata, sav pretopljen.³⁹ Naravno, ovo se nije moglo u potpunosti sprovesti⁴⁰ i novac Kaligule i uopšte careva Julijevsko-Klaudijevske dinastije, pojavljuje se i kasnije kao prilog u grobovima.⁴¹ Nalazi ostava novca iz podunavskih i balkanskih provincija, takođe potvrđuju njihovu kasniju cirkulaciju. Novac Marka Antonija i članova Julijevsko-Klaudijevske dinastije pojavljuje se u pojedinim ostavama sve do kraja četvrte decenije III.⁴²

Kod jedinog groba (G1 927) u kome je zabeležen nalaz 5 novčića, raspon od najstarijeg (Klaudije) do najmlađeg (Faustina II) iznosi oko 130 godina. Među grobovima sa kremiranim pokojnicima u tri slučaja (G1 333, 750 i 798) se pojavljuje četiri novčića, dok je ovaj broj zabeležen samo u jednom grobu sa inhumiranim pokojnikom (G 1690). Kod G1 333 su svi priloženi novci iz vremena A. Severa (A. Sever 3, J. Mamea 1) i iz bitinijskih

37 Kod kojih raspoložemo sastavom malog depoa. U slučaju G 1277B je svih 13 primeraka izgubljeno, delimično su rasuti i nalazi iz G 1547 i G 1560.

GRAVES WITH A LARGER NUMBER OF COINS – CHRONOLOGICAL RANGE FROM THE OLDEST TO THE YOUNGEST SPECIMEN

In all instances where a larger number of coins was recorded in a grave (7-8),³⁷ the span from the oldest to the youngest ranges from 50-100 years, with the exception of G 1974C, comprising specimens from the 1st (Caligula/Nero/Domitian) and the 3rd centuries (Gordian III/Trebonianus Gallus/Aemilian), with an approximate span of more than 200 years. The presence of 1st century coins in 3rd century graves is a less frequent occurrence, although not an exception.³⁸ In the specific case of G 1974C, a bronze coin of Caligula appears, which had, according to the testimony of ancient sources, on the orders of the Senate, all been melted after his death.³⁹ Clearly, this could not have been fully implemented⁴⁰ and the coins of Caligula, and generally the emperors of the Julio-Claudian dynasty, also appear later as grave goods.⁴¹ Finds of coin hoards from the Danube and Balkan provinces further confirm their subsequent circulation. The coins of Marcus Antonius and the members of the Julio-Claudian dynasty appear in various hoards all the way to the end of the 4th decade of the 3rd century.⁴²

In the only grave where a find of 5 coins was ascertained (G1 927), the range from the oldest (Claudius) to the youngest (Faustina II) is about 130 years. Among the cremation burials, in three cases (G1 333, 750 and 798) four coins ap-

37 Representing the composition of a small hoard. In the case of G 1277B, all of the 13 coins have been lost and the finds from G 1547 and G 1560 were partially scattered.

kovnica (Nikeja, Nikomedija). Tri primerka iz G1 750 su izgubljena, dok je preostali, četvrti primerak neodređen (I-II vek). Prilozi iz G1 798 takođe ne pokazuju neuobičajena odstupanja i raspon iznosi oko 100 godina. (Kaligula – Hadrijan). Još manji raspon pružaju nalazi četiri novčića iz G1 1690 (Vespazijan – Trajan).

Grobovi sa tri novca, kao što je već naglašeno, osetno su bolje zastupljeni kod kremacija (21) u odnosu na inhumacije (5). Među pet grobova sa inhumiranim pokojnicima nema većih odstupanja između najstarijeg i najmlađeg primerka (od 50 – 100 godine), izuzev u slučaju G1 1176. Kod ove dečje sahrane priložena su tri novca: neodređeni tri puta perforiran dp/as I vek, as A. Pija i jednom perforiran denar-suberat iz prve polovine III veka. Hronološka razlika između novčića iznosi između 150 i 200 godina. Daleko veća odstupanja zabeležena su u nekoliko grobova kremiranih pokojnika sa tri novčića kao prilogom. Najveća hronološka razlika između primeraka novca pojavljuje se u G1 337, gde iznosi između 315 i 320 godine. Najstariji primerak je as Kaligule (komemorativno kovanje za Agripu) koji se datuje od 37-41. godine, drugi primerak je as Komoda kao cezara i najmlađe je bronzano kovanje Julijana kovnice Tesalonika datovano između 355-361. godine. Drugi ekstremni primer čine nalazi iz G1 1748 kod koga ova hronološka razlika iznosi između 290 i 317 godine. Najstariji je as Domicijana kao cezara kovan 75. godine, prisutan je i as Hadrijana, dok je najmlađi bronzani primerak iz druge polovine IV veka sa rev. legendom SECVRITAS REI PVBLICAE, koja se pojavljuje od 364. do 392. godine. Među grobove sa većom hronološkom razlikom između nalaza novca spadaju još i: G1 355 gde ova razlika iznosi približno 280 godina. (denar Vespazijana – neodređeni bronzani novac IV vek); G1 1656 sa rasponom od 242 do 262 godine (as Avgusta datovan 18-4. godine s.e. – provincijsko kovanje Nikeje za Gordijana III); G1 698 sa razlikom od 192 do 206 godine. (Tiberije – A. Sever). Kod svih ostalih grobova sa kremacijom sa tri novčića kao prilogom razlika između najstarijeg i najmlađeg kreće se od 50 do 150 godina.

Grobovi koji su imali dva novčića, osim u dva slučaja, ne pokazuju osetnije hronološke razlike među novcima. U primeru G1 513 razlika između starijeg i mlađeg primerka iznosi između 240 i 252 godine (Tiberije – Aurelijan), dok je kod G1 633 raspon od 237 do 243 godine (Avgust 15. godine s.e. – A. Sever).

pear, whereas this number was noted only in a single inhumation burial (G1 1690). In G1 333, all of the deposited coins originate from the time of Severus Alexander (Severus Alexander 3, J. Mamaea 1) and from the mints of Bithynia (Nicaea, Nicomedia). Three coins from G1 750 have been lost, while the age of the remaining 4th specimen is undetermined (1st–2nd century). The grave goods from G1 798 also do not exhibit any unusual discrepancies and the range amounts to about 100 years (Caligula – Hadrian). An even shorter range is suggested by the finds of four coins from G1 1690 (Vespasian – Trajan).

Graves with three coins, as already mentioned, are noticeably more frequent in cremations (21) compared to inhumations (5). Among the five inhumation burials, there are no significant discrepancies between the oldest and the youngest specimen (from 50–100 years), with the exception of G1 1176. In this child burial, three coins were deposited: an unidentified, triply perforated dp/as from the 1st century, an as of A. Pius and a singly perforated denarius-subaeratus from the mid-3rd century. The chronological difference between the coins is between 150 and 200 years. Far greater deviations were observed in several graves with cremations with three coins in their inventory. The largest chronological difference between the coins is seen in G1 337, ranging between 315 and 320 years. The oldest specimen is a Caligulan as (commemorating Agrippa) which is dated to 37–41, a second specimen is an as of Commodus as Caesar and the youngest is a bronze coin of Julian from the mint of Thessalonica, dated between 355 and 361. The finds from G1 1748 represent another, extreme example, with a chronological difference ranging between 290 and 317 years. The oldest is an as of Domitian as Caesar, minted in 75, an as of Hadrian is also present, while the youngest is a bronze specimen from the second half of the 4th century bearing a reverse legend of SECVRITAS REI PVBLICAE, which occurs from 364 to 392. Included among the graves with a larger chronological difference between coin finds are: G1 355, where the difference is nearly 280 years (a denarius of Vespasian – an undetermined bronze coin from the 4th century); G1 1656, with a range from 242 to 262 years (an as of Augustus, dated to 18–4 BC – a provincial coin of Nicaea for Gordian III); G1 698 with a difference of between 192 and 206 years (Tiberius – Severus Alexander). In all other cremation burials with three coins in their inventory, the differen-

PERFORIRANI NOVCI PRONAĐENI U GROBOVIMA

Izvestan broj nalaza novca sa nekropole Više grobalja je probušen, jednom ili tri puta. Ukupno ih je 47, od toga je 23 pronađeno u grobovima inhumiranih pokojnika (13 sa jednom perforacijom i 10 sa tri), 9 u grobovima sa kremacijama (6 sa jednom perforacijom i 3 sa tri) i 15 u sloju na nekropoli (12 sa jednom perforacijom i 3 sa tri) (Grafikon 8). Zapaža se znatno veća prisutnost perforiranih novčića u grobovima inhumiranih u odnosu na kremirane pokojnike. Kod poslednjih su to istovremeno i jedini numizmatički nalazi u grobovima, za razliku od inhumacija kod kojih se u pojedinim slučajevima pojavljuje više probušenih novčića ili se pored njih nalaze i neperforirani.

Kod grobova inhumiranih pokojnika u kojima su pronađeni perforirani novci (sa 1 i 3 perforacije) razlikujemo grobove odraslih individua i dece. Zabeležena su četiri groba odraslih individua sa jednom perforiranim novčićem (G 596, 1426, 1974C, 2049) i jedan grob sa tri puta perforiranim novčićem (G 1626). U jednom grobu (G 2079) pronađena su dva perforirana novca: jedan jednom i drugi tri puta (Tabela 7). Među dečijim grobovima jednom probušen novčić pojavljuje se pet puta (G 706, 1025, 1339, 1897, 1708), s tim što su u poslednjem navedenom pronađena dva jednom perforirana novčića. U šest dečijih grobova zabeleženi su po tri puta probušeni novčići (G 216, 247, 474, 1512, 1775, 1825). Pored toga, u dva dečija groba (G 1176, 2116) je pronađen po jedan

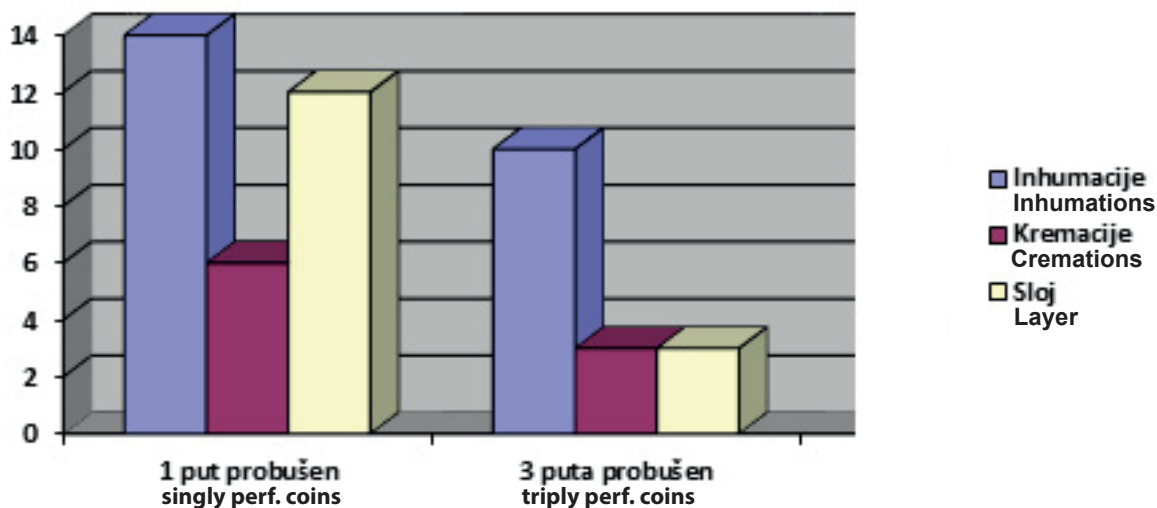

ce between the oldest and the youngest ranges from 50 to 150 years.

Graves with two coins, with two exceptions, do not exhibit more significant chronological differences between the coins. In example G1 513, the difference between the older and the younger specimen is between 240 and 252 years (Tiberius – Aurelian), whereas in G 633, the range is between 237 and 243 years (Augustus 15 BC – Severus Alexander).

PERFORATED COINS DISCOVERED IN GRAVES

A number of coin finds from the necropolis of Više grobalja are perforated either once or three times. Of the total of 47, 23 were discovered in graves with inhumations (13 with one, and 10 with three perforations), 9 in graves with cremations (6 with one and 3 with three perforations) and 15 in the layers of the sacrificial areas at the necropolis (12 with one and 3 with three perforations) (Graph 8). A significantly greater incidence of perforated coins is observed in inhumation burials compared to cremations. In the latter, they are also the sole numismatic finds in the graves, unlike in inhumations, which can contain a number of perforated coins, sometimes accompanied by those without perforations.

In inhumation burials, where perforated coins (with 1 or 3 perforations) were discovered, the graves of adults and children are distinguished.

Grafikon/Graph 8 - Zastupljenost perforiranih primeraka na nekropoli (u grobovima i sloju)/Perforated coins on necropolis (from graves and from layers).

jednom bušen i po jedan tri puta bušen novčić (Tabela 8). Iz navedenog se zapaža znatno veća prisutnost perforiranih novčića u dečijim grobovima (14 grobova) u odnosu na grobove odraslih individua (6 grobova). Osim toga, u dečjim grobovima (u 8 od 14) su pored perforiranih nalaženi i neprobušeni novčići (1 ili 2 kom.).

Položaj jednom perforiranih primeraka u grobovima odraslih individua vezan je uglavnom za predeo nogu (3 groba), a ređe za torzo (1 grob) i predeo pored karlice (1 grob). U dva primera odraslih individua sa tri probušena novčića, jedan se nalazio u pored karlice, a drugi pored leve noge. Uopšte uzevši, kod odraslih individua perforirani novci su uglavnom nalaženi u predelu nogu. Kod dečijih grobova položaj novčića sa jednom perforacijom vezuje se za predeo desne noge (2 groba), po jednom zabeležen je položaj u ustima, na torzou, karlici i pored leve ruke, dok u tri slučaja položaj nije bilo moguće utvrditi. U primeru tri puta perforiranih novčića u dečijim grobovima, u tri slučaja pronađeni su u predelu glave, po jednom u predelu torzoa, karlice i leve noge, dok je dva puta položaj ostao neutvrđen (Tabele 7-8).⁴³

Jednom probušeni novci korišćeni su tokom antike kao privesci, na ogrlicama ili naušnicama. Mada često nisu tretirani kao tzv. »monetarni nakit«, naročito u primerima kada je kontekst nalaza nepoznat i postoji bojazan da je rimski novac probušen kasnije.⁴⁴ Međutim, nalazi sa nekropole Više grobalja potiču iz zatvorenih grobnih celina te u pojedinim primerima možemo sa izvesnom sigurnošću pretpostaviti da su činili deo kompozitne ogrlice ili narukvice. Perforirani novac iz G 596 pronađen je na grudima pokojnika zajedno sa lunulastim srebrnim priveskom, dok je pored levog ramena pronađen, još jedan lunulasti privesak koji bi mogao biti deo iste ogrlice. Novac iz G 1426 pronađen je pored leve potkolenice na istom mestu sa: probušenom morskom školjkom, perlom od staklene paste, bronzanom perlom i dva bronzana priveska. Zajedno su verovatno činili deo narukvice ili ogrlice. Slično je i sa novcem iz G 706, koji je nađen zajedno sa probušenim životinjskim zubom. Iz G 1708 potiču dva probušena novčića: jedan od njih nađen je na grudima, te bi možda predstavljao deo ogrlice sa jednim pri-

Four graves of adult individuals were noted with a singly perforated coin (G 596, 1426, 1974C, 2049) and a grave with a triply perforated coin (G 1626). In one grave (G 2079), two perforated coins were discovered: one with a single perforation and the other with three (Table 7). In children's graves, a singly perforated coin appears in five cases (G 706, 1025, 1339, 1897, 1708), although in the latter, two singly perforated coins were discovered. In six children's graves, triply perforated coins were recorded (G 216, 247, 474, 1512, 1775, 1825). Additionally, two children's graves (G 1176, 2116) each contained one coin with a single and one with three perforations (Table 8). This demonstrates a considerably larger incidence of perforated coins being observed in children's burials (14 graves) compared to those of adults (6 graves). Furthermore, children's graves (8 of 14), together with the perforated coins, also contained those without perforations (1 or 2 coins).

The position of singly perforated specimens in the graves of adult individuals is mainly in the region of the legs (3 graves) and less frequently the torso (1 grave) and the pelvic region (1 grave). In two instances of adult individuals with three perforated coins, one was located near the pelvis, whereas the others were by the left leg. Generally, in adult burials, perforated coins were most commonly observed in the leg region. In children's graves, the position of coins with a single perforation relates to the region of the right leg (2 graves), a position in the mouth, on the torso or on the pelvis and by the left arm were each recorded once, while in three cases the position could not be determined. In the cases of triply perforated coins in children's graves, in three instances they were discovered in the head region, once in the region of the torso, pelvis and left leg, whilst in two cases it remained undetermined (Tables 7 and 8).⁴³

Singly perforated coins were used throughout Antiquity as pendants on necklaces or earrings, although they have not often been treated as so-called "monetary jewellery", especially in instances where the context of the find is unknown and there is concern that Roman coins had been perforated at a later date.⁴⁴ The finds from the

43 Neutvrđeni položaj novca kao i drugih nalaza u odnosu na skelet, relativno je čest slučaj kod dečijih sahrana, kod kojih su kosti očuvane u tragovima.

44 Поповић 1993: 55.

43 An undetermined position of both the coins and the other finds in relation to the skeleton is relatively common in children's burials, in which only traces of the bones are preserved.

44 Поповић 1993: 55.

veskom; za drugi primerak nema elemenata koji bi ukazivali da je upotrebljen kao deo nakita. Perforirani novac iz G 1339 nađen je zajedno sa dve perle od staklene paste, bronzanom karičicom i pršljenkom od stakla, što upućuje da su korišćeni kao nakit. Probušeni novac iz G 1897 nađen je zajedno sa bronzanim priveskom u obliku falusa i minijaturne kamene alatke koji su činili nisku.⁴⁵ Nalazi iz G 1025, G 1974C i G 2049 ne ukazuju da je perforirani novac korišćen kao nakit. U primeru dečijeg groba (G 1897) jednom perforirani novac pronađen je kao deo ogrlice, koja je pronađena u predelu stomaka.⁴⁶ Pored perforiranog novca koji

⁴⁵ Спасић-Ђурић 2008: 132, Sl. 4.9.

⁴⁶ U malom broju primera, kada je prilikom iskopavanja bilo nesumnjivo da perforirani novac pripada delu nakita,

Više grobalja necropolis, however, originate from undisturbed graves and thus, in some cases, it can be relatively safely assumed that they constituted a part of a composite necklace or a bracelet. The perforated coin from G 596 was discovered on the chest of the deceased, along with a lunate silver pendant. Another lunate pendant was detected next to the left shoulder, which could have been a part of the same necklace. The coin from G 1426 was discovered near the left lower leg, in the same place as a perforated seashell, a glass paste bead, a bronze bead and two bronze pendants. Together, they had most likely formed a part of a bracelet or a necklace. Similarly, the coin from G 706 was discovered together with a perforated animal tooth. From G 1708, two perforated coins originate, one of which was located on the

je upotrebljen kao privezak, ogrlicu su sačinjavali još i: bronzani privezak u obliku falusa i minijatur-

isti je, sa ostalim privescima, bio shranjen i označen u dokumentaciji kao »ogrlica«, »privezak« ili »minduša«. Takvi primerci perforiranih novčića ne čine deo numizmatičke zbirke već pripadaju zbirci nakita. Kao takvi nisu bili predmet numizmatičke obrade i ne nalaze se u katalogu.

chest and, thus, might have represented a part of a necklace with a single pendant, whereas for the other specimen, there are no elements which would suggest that it was used as a part of jewellery. The perforated coin from G 1339 was recorded together with two glass paste beads, a small bronze hoop and a glass spindle whorl, which indicates that they had been used as jewellery. The perforated coin from G 1897 was discovered to-

na kamena altaka (čekić ili sekira ?).⁴⁷

U slučaju grobova sa inhumiranim pokojnicima, koji su sadržavali jednom i tri puta probušene novčiće, kod dva (G 2079 i G 2116) možemo reći da su oba probušena novca deo iste ogrlice ili narukvice. U prvom primeru pronađeni su pored leve karlice sa bronzanom bulom i četiri perle, dok su u drugom nađeni ispod keramičkog lonca zajedno sa tri perle i bronzanim dugmetom sa perforacijom u sredini. U grobu G 1176 za jednom probušenom novcem ne možemo reći da postoje indicije koje bi ukazivale da je korišćen kao nakit, ali za tri puta perforiran novac, iz istog groba, postoje izvesne, jer je pronađen zajedno sa dve perle.

Od šest jednom perforiranih novčića pronađenih u grobovima kremiranih pokojnika, za dva primera možemo pretpostaviti da su predstavljali deo ogrlice ili narukvice, dok za ostalih 4 nema elemenata u prilog ovoj tvrdnji. U G1 903 probušeni novac nađen je zajedno sa dve perle od staklene paste i probušenim zubom divljeg vepra. U primeru G1 1111 novac je nađen na istom mestu sa dve bronzane alke, koštanim perforiranim žetonom, kamenim priveskom i dve perle od staklene paste. Kao što je već navedeno, neki primerci novca koji su očito predstavljali deo tzv. »monetarnog nakita« nisu prilikom dokumentovanja bili pripojeni numizmatičkoj zbirci.⁴⁸ To je bio slučaj sa bronzanim novcem iz G1 1105 koji ima apliciranu ušicu.⁴⁹ U istom grobu je pored ovog novca priveska pronađen još jedan primerak Marka Aurelija iz nepoznate provincijske kovnice.⁵⁰

47 Спасић-Ђурић 2008: 131-133, sl. 4/9. Na isti način tretiran je i jednom perforirani novac sa nekropole Pećine (G 1749) koji je nedvosmisleno predstavljao deo naušnice (lokalitet Pećine, G 1749, bronzana naušnica sa priveskom od manjeg bronzanog novca (C 5027); terenski dnevnik 1982 godine, str. 1602). Na istoj nekropoli, Pećine, pronađen je i dva puta perforirani bronzani novac (G 4288) koji je pored bronzane bule, perli od čilibara, keramike, kamena, staklene paste i kosti, činio deo ogrlice (Lokalitet Pećine, G 4288, ogrlica (C 11383); terenski dnevnik 1985 godine, str. 3000).

48 Cf. *supra* ref. 46.

49 Slična vrsta ušice zabeležena je na jednom primerku iz zbirke Narodnog muzeja u Beogradu (cf. Поповић 1993: 50, кат. 4, сл. 4 и 4а).

50 U grobovima sa kremiranim pokojnicima na nekropoli Pećine zabeležena su još dva primera upotrebe novca kao nakita. U G1 187 jednom perforirani bronzani novac upotrebljen je kao privezan na ogrlici. Pored novca kao

gether with a bronze phallic-shaped pendant and a miniature stone tool pendant, forming a string.⁴⁵ Finds from G 1025, G 1974C and G 2049 show no indications that the perforated coins were used as jewellery. In the case of the child's grave (G 1897), a singly perforated coin was discovered as a part of a necklace, located in the region of the stomach.⁴⁶ In addition to the perforated coin, used as a pendant, the necklace was composed of a bronze phallic-shaped pendant and a miniature stone tool (a hammer or an axe?).⁴⁷

In inhumation burials which contained singly and triply perforated coins, for two graves (G 2079 and G 2116) it can be stated that both perforated coins constitute a part of the same necklace or bracelet. In the first example, they were discovered near the left side of the pelvis with a bronze bulla and four beads, while in the second, they were located underneath a ceramic pot, together with three beads and a bronze button with a perforation in the middle. For the singly perforated coin from grave G 1176, there are no indications that would imply it was used as jewellery, but for the triply perforated coin from the same grave, there are suggestions that it was, since it was discovered together with two beads.

Out of six singly perforated coins discovered in the cremation burials, two are assumed to have represented a part of a necklace or a bracelet, whereas for the other four, there are no ele-

45 Спасић-Ђурић 2008: 132, Fig. 4.9.

46 In a small number of cases when, during the excavations, there was no doubt that the perforated coins were parts of jewellery, they were stored with the other pendants and labelled as a "necklace", "pendant" or "earring" in the fieldwork documentation. Such examples of perforated coins do not form a part of the numismatic collection; they belong to the jewellery collection. As such, they were not subjected to numismatic processing and are, therefore, not included in the catalogue.

47 Спасић-Ђурић 2008: 131-133, Fig. 4.9. A singly perforated coin from the necropolis of Pećine (G 1749), which unambiguously represented a part of an earring, was treated in the same manner (the site of Pećine, G 1749, a bronze earring with a pendant of a small bronze coin (C 5027); fieldwork journal 1982, p. 1602). At the same necropolis of Pećine, a doubly perforated bronze coin was discovered (G 4288) which constituted a part of a necklace, along with a bronze bulla and amber, ceramic, stone, glass paste and bone beads (the site of Pećine, G 4288, necklace (C 11383); fieldwork journal 1985, p. 3000).

Za razliku od jednom probušenih novčića koji se uglavnom smatraju privescima, kod tri puta probušenih pojavljivala su se i drugačija mišljenja. Gorecki (Gorecki) govoreći o novcu u funkciji nakita, pominje »da su povremeno bili prišivani i na odeću«. Kao jedini primer navodi grob 99 iz Poatjea (Poitiers) čiji su istraživači 1934. godine pretpostavili da je tri puta probušen novac mogao imati i drugu funkciju, nevezanu za pogrebni ritual ili kao nakita. Pomislili su da je možda bio prišivan na odeću pokojnika iz razloga što su u istom grobu pronašli još jedan, neperforiran, novac.⁵¹ Oslanjajući se na ovo mišljenje, slične pretpostavke su iznete u primeru jednog tri puta probušenog novca nađenog u dečijem grobu u Brigetiju (Brigetio). Novac je pronađen u šaci deteta, a autori pomišljaju da je najpre mogao biti pričvršćen za odeću kao amulet, te potom, tokom pogrebne ceremonije, uklonjen i stavljen u šaku. U ovoj sekundarnoj upotrebi imao bi značenje platežnog sredstva za prelaz u svet mrtvih.⁵²

Nalazi ovakvih novčića sa nekropole Više grobalja ukazuju na njihovu upotrebu kao nakita, odnosno dela ogrlice ili narukvice u većini primera, kao i znatno veću prisutnost u dečjim (8) u odnosu na grobove odraslih individua (2) (Tabele 7-8). Kod G 247 u ustima pokojnika se nalazio neperforiran novac, dok su svi ostali nalazi pronađeni u predelu stomaka, verovatno u vrećici koja nije očuvana, i to: tri puta probušen novac, bronzana bula, tri keramičke i dve perle od staklene paste, privezak od ćilibara, dva životinjska zuba sa bronzanim karičicama, morski puž sa karičicom, koštana pređica, bronzano dugme i bronzani prsten. Nalazi ukazuju na mogućnost da je novac bio deo ogrlice ili narukvice.⁵³ U primeru groba G 1775

privesci na ogrlici su i: perle od staklene paste, bronzanog lima, privezak od jelenjeg roga i bronzana bula (lokalitet Pećine, ogrlica C 2529, terenski dnevnik 1981 godine, str. 950). U G1 720 je kao privezak na srebrnoj naušnici upotrebljen manji, perforirani, bronzani novac (lokalitet Pećine, naušnica C 7757, terenski dnevnik 1983 godine, str. 2088). Za slične primere koji potiču sa nekropola iz zatvorenih celina, cf. Gorecki 1975: 249, ref. 273 (deo narukvice), ref. 274 (deo ogrlice); Ertel C. et. al. 1999: 159, Taf. 52 (deo amuleta).

51 Gorecki 1975: 249, ref. 275.

52 Na nekropolama u Brigetiju pronađeno je tri primerka tri puta probušenog novca, ali je dokumentacija o uslovi- ma nalaza sačuvana samo za jedan. (cf. Găzduc-Alföldy, Găzduc 2009: 166, ref. 22-23).

53 Зотовић, Јордовић 1990: 70-71, Т. XLII-XLIII.

ments to support this assertion. In G1 903, the perforated coin was discovered together with two glass paste beads and a perforated tooth of a wild boar. In G1 1111, the coin was discovered together with two bronze hoops, a perforated bone gaming counter, a stone pendant and two glass paste beads. As already noted, some coins, which clearly represented a part of the so-called "monetary jewellery", had not been included in the recorded documentation of the numismatic collection.⁴⁸ This was the case with a bronze coin from G1 1105, with an applied eyelet.⁴⁹ In the same grave, along with this coin-pendant, a coin of Marcus Aurelius from an unknown provincial mint was discovered.⁵⁰

Unlike singly perforated coins, which are generally assumed to be pendants, different opinions arise with regard to those with three perforations. Gorecki, when commenting on coins functioning as jewellery, states that "sometimes they were also sewn onto the clothing". As the only example, he cites grave 99 from Poitiers, the researchers of which, in 1934, assumed that the triply perforated coin could have had another function that did not relate to the funerary ritual or to jewellery. It was thought that it might have been sewn onto the clothes of the deceased, since another coin was discovered, without any perforations, in the same grave.⁵¹ This opinion led to similar assumptions being made regarding the example of a triply perforated coin from a child's grave at Brigetio. The coin was discovered in the child's

48 Cf. *supra* ref. 48.

49 A similar type of eyelet was recorded on a specimen from the collection of the National Museum in Belgrade (cf. Поповић 1993: 50, кат. 4, сл. 4 и 4а).

50 In cremation burials at the necropolis of Pećine, two other examples of coins used as jewellery were recorded. In G1 187, a singly perforated bronze coin was used as a necklace pendant. Together with the coin, the necklace comprised pendants of beads of glass paste and bronze sheet, a pendant of deer horn and a bronze bulla (the site of Pećine, necklace (C 2529); fieldwork journal 1981, p. 950). In G1 720, a silver earring had a pendant of a small, perforated, bronze coin (the site of Pećine, earring (C 7757); fieldwork journal 1983, p. 2088). For similar examples that originate from undisturbed graves at necropolises, cf. Gorecki 1975: 249, ref. 273 (part of a bracelet), ref. 274 (part of a necklace); Ertel C. et. al. 1999: 159, Taf. 52 (part of an amulet).

51 Gorecki 1975: 249, ref. 275.

takođe ima elemenata koji ukazuju da je novac bio deo ogrlice, jer je novac pronađen zajedno sa 9 perli i bronzanom bulom. Kod groba G 474 tri puta perforirani novac nađen je na grudima pokojnika zajedno sa 9 morskih školjki i jednim neprobušenim novcem. S ozirom da je nađen na grudima, postoji mogućnost da je predstavljao jedini privezak na ogrlici ili da je bio prišiven na odeću. Međutim, u slučaju tri groba (G 1512, G 1626, G 1825) nema elemenata da bi tri puta perforirani novac bio deo nakita. U prvom primeru pronađen je u predelu glave (usta ?), u drugom pored leve butne kosti zajedno sa neprobušenim novcem i u trećem primeru nađen je kraj nogu, pored žiška i balzamarija.

Izuzetak predstavlja dečiji grob (G 216) kod koga, na osnovu ostataka tkanine na tri puta perforiranom novcu, možemo reći da je bio pričvršćen za deo odeće. Nađen je u predelu glave, zajedno sa još jednim neprobušenim novcem, dve morske školjke i manjim keramičkim krčagom. U pitanju je grob deteta do jedne godine starosti, neutvrđenog pola, koji je datovan u kraj I veka.⁵⁴

Perforirani novci pronađeni u sloju između ili iznad grobova (12 primeraka jednom probušenih i 3 tri puta probušeni) nalaženi su uglavnom pojedinačno, tako da nema elemenata u prilog tvrdnji da bi činili deo kompozitne ogrlice ili narukvice. Kako izostaju i alke ne možemo reći ni da su predstavljali deo minđuše ili priveska na ogrlici. Kao i kod svih već pomenutih primeraka nađenih u grobovima, kod kojih takođe izostaju ovi elementi, ostaje otvorena mogućnost da su bili prišiveni na deo tkanine, koja bi na neki način bila korišćena prilikom daća. Mada se ova mogućnost čini verovatnijom u primeru grobova, gde bi novac bio pričvršćen na deo odeće pokojnika. Kako god, to ostaje u sferi pretpostavki, osim u slučaju dečjeg groba (G 216) gde su na novcu očuvani ostaci tkanine.

⁵⁴ Osim toga u grobu su pronađeni i sledeći nalazi: u predelu nogu dva krčaga, na grudima bronzana bula, u predelu leve noge dve bronzane i jedna srebrna bula, koštana perla, dve perle od staklene paste, privezak od zuba divljeg vepra sa bronzanom karičicom, pršljen mladog govečeta u koji je bio postavljen neperforiran novac, dva manja bronzana zvončica i jedna morska školjka (cf. Зотовић, Јордовић 1990: 68, T. XXXVI-XXXVII).

hand, and the authors consider that it could have been attached to the clothes as an amulet and was, subsequently, during the burial ceremony, removed and placed in the hand. In this secondary use, it would signify a means of payment for the transition into the world of the dead.⁵²

Finds of these kinds of coins at the necropolis of Više grobalja indicate their use as jewellery, specifically a part of a necklace or a bracelet in the majority of cases, as well as their much larger incidence in the graves of children (8) than in those of adults (2) (Tables 7 and 8). In G 247, a coin without any perforations was located in the mouth of the deceased, whereas all other finds, which were discovered in the stomach region, possibly in a pouch that was not preserved, were as follows: a triply perforated coin, a bronze bulla, three ceramic and two glass paste beads, an amber pendant, two animal teeth with small bronze hoops, a sea snail with a small hoop, a bone clasp, a bronze button and a bronze ring. The finds point to the possibility that the coin was a part of a necklace or a bracelet.⁵³ In the case of grave G 1775, there are also elements implying that the coin was a part of a necklace, since it was discovered together with 9 beads and a bronze bulla. In grave G 474, a triply perforated coin was discovered on the chest of the deceased, together with 9 seashells and a coin without any perforations. Given that it was located on the chest, it could possibly have been the only pendant on a necklace or was sewn onto the clothes. However, in the case of three other graves (G 1512, G 1626 and G 1825), there are no elements to suggest that the triply perforated coin represented a part of jewellery. In the first example, it was discovered in the region of the head (mouth?), in the second, next to the left femur, along with a coin without any perforations, and in the third, it was located near the legs, next to an oil lamp and a balsamarium.

The exception is a child's grave (G 216) in which, judging by the cloth remnants on a triply perforated coin, it can be assumed to have been attached to the clothes. It was discovered in the region of the head, together with another, unperforated, coin, two seashells and a small ceramic

⁵² At the necropolises of Brigetio, three triply perforated coins were discovered; however, the documentation with regard to the circumstances of the discovery is preserved only for one (cf. Găzduc-Alföldy, Găzduc 2009: 166, ref. 22-23).

⁵³ Зотовић, Јордовић 1990: 70-71, T. XLII-XLIII.

ZASTUPLJENOST REVERSNIH TIPOVA

Po mnogo čemu koristan i više puta pomenut rad Agnes Gazdac-Alfeldi i Kristijana Gazdaca (Á. Găzdac-Alföldy, C. Găzdac) o novcu u funeralnom kontekstu na primeru Brigetija, pruža nam, između ostalih, i podatke o zastupljenosti reversnih tipova na nekropoli i iz naselja. Na osnovu relativno malog uzorka određenih reversnih predstava⁵⁵ i njihovim poređenjem sa sličnim rezultatima iz Apuluma (Apulum) u rimskoj Dakiji, došli su do zaključka da značaj sekundarnog simboličnog značenja ponude novca ne bi trebalo preuveličavati, ali da podaci pokazuju dublju vezu između predstava na novcu i sujeverija ili pobožnog mentaliteta običnih ljudi.⁵⁶ Ovakva vrsta analize može biti korisna i mišljenja smo da je potrebno sakupiti istovrsne podatke sa što većeg broja nekropola, čijim poređenjem bi dobili jasniju sliku da li su i u kojoj meri motivi reversnih predstava imali uticaja u pogrebnim ritualima. Osim toga, ukoliko bi smo utvrdili da postoji ova povezanost, dobili bi smo i podatke o različitostima u zastupljenosti motiva u pojedinim regionima ili provincijama.

Kako nekropola Više grobalja pruža znatno veći uzorak (52,47%), odlučili smo se za primenu sličnog metoda, koji je, sa jedne strane, ograničen prirodom istraživanja na Viminacijumu. Naime, zaštitna iskopavanja koja su već decenijama na Viminacijumu uslovljena potrebama površinskog kopa uglja, rezultirala su znatno većom istraženošću nekropola u odnosu na vojni logor i civilno naselje. Iz tog razloga poređenje numizmatičkih nalaza sa viminacijumskih nekropola i naselja ili logora ne bi dalo ni približno pravu sliku. Ova analiza sačekace neke buduće istraživače. Kada se obim istraženosti civilnog naselja i logora bude približio istraženosti nekropola. Jedino smisljeno poređenje zastupljenosti reversnih tipova, u ovoj

⁵⁵ Od ukupno 216 primeraka novca pronađenih na nekropolama u Brigetiju, samo u 27 slučajeva (ili 12,5%) moguće je bilo odrediti tip reversne predstave. Broj primeraka novca sa nekropole u Apulumu nije nam poznat, već samo procenti zastupljenosti reversnih tipova koje daju Gazdac-Alfeldi i Gazdac (cf. Găzdac-Alföldy, Găzdac 2009: 171, Fig. VIII). Sa nalazima na nekropoli Više grobalja situacija je bitno drugačija: od 1595 primeraka novca pronađenih u grobovima, kod 837 je bilo moguće odrediti tip reversne predstave, što iznosi 52,47%.

⁵⁶ Na obe nekropole u najvećem procentu zastupljeni su religiozni tipovi. (cf. Găzdac-Alföldy, Găzdac 2009: 166-170).

jug. This is the grave of an infant, aged up to one year, of undetermined sex and dated to the end of the 1st century.⁵⁴

Perforated coins from the layers between or above the graves (12 singly perforated and 3 triply perforated examples) were, for the most part, discovered individually, hence there are no elements to support the assumption that they had been a part of a composite necklace or a bracelet. Since hoops are lacking as well, it cannot be assumed that they formed a part of an earring or a pendant on a necklace. As with all the aforementioned specimens discovered in the graves, where all these elements are also absent, the possibility remains that they had been sewn onto a piece of cloth, which would have, in some way, been used during commemorative repasts. This possibility, however, seems more plausible in the case of graves where coins might have been attached to a part of the clothes of the deceased. However, this remains open to conjecture, except in the case of the child's grave (G 216) where cloth remnants were preserved on the coin.

INCIDENCE OF REVERSE TYPES

The informative and repeatedly referred to work of Ágnes Găzdac-Alföldy and Cristian Găzdac on the subject of coins in a funerary context with the example of Brigetio, among others, provides data with regard to the incidence of reverse types at the necropolis and the settlement. Based on a relatively small sample of specific reverse depictions⁵⁵ and by comparing them with

⁵⁴ Additional finds discovered in the grave are as follows: two jugs in the leg region, a bronze bulla on the chest, two bronze and one silver bulla in the left leg region, a bone bead, two glass paste beads, a pendant made from the tooth of a wild boar and with a small bronze hoop, a calf's vertebra, into which an unperforated coin was placed, two small bronze bells and a seashell (cf. Зотовић, Јордовић 1990: 68, Т. XXXVI-XXXVII).

⁵⁵ From a total of 216 coins discovered at the necropolises of Brigetio, only in 27 cases (or 12.5%) was it possible to determine the type of the reverse depiction. The number of coins from the necropolis at Apulum is unknown, only the percentages of the incidence of reverse types provided by Găzdac-Alföldy and Găzdac (cf. Găzdac-Alföldy, Găzdac 2009: 171, Fig. VIII). As for the finds at the necropolis of Više grobalja, the situation is considerably different: of 1595 coins discovered in graves, in 837 it was

fazi istraživanja, možemo izvesti sumiranjem rezultata numizmatičkih nalaza iz grobova i onih iz sloja na nekropoli. Namera nam je da utvrdimo da li i u kojoj meri postoji razlika između predstava na novcima polaganim u grobove prilikom sahrane i onih korišćenih kasnije prilikom poseta grobovima, tokom redovnih godišnjih pomena. Koristili smo već usvojeno sažimanje reversnih tipova u grupe radi lakšeg poređenja sa postojećim podacima sa nekropola u Brigetiju i Apulumu.⁵⁷ U skladu sa tim, izdvojene su sledeće grupe reversnih tipova: I – civilni, II – vojni, III – religiozni sa tri podgrupe: IIIa – personifikacije blagonaklonosti, IIIb – drugi svet/žrtvovanja/pijetet, IIIc – opšti religiozni (Tabele 9 i 10).

Na nekropoli Više grobalja je u okviru grobnih celina (G i G1) pronađeno ukupno 1595 primeraka novca. Od tog broja kod 837 (ili 52,47%) bilo je moguće odrediti tip reversne predstave. U sloju na nekropoli, što podrazumeva nalaze novca van grobnih celina, na žrtvenim površinama, ustrinama i prostoru između grobova, pronađeno je 1538 primeraka, od kojih je kod 861 (ili 55,98%) utvrđen tip reversne predstave. U slučaju obe analize, nalazi sa nekropole Više grobalja pokazuju sasvim drugačiju sliku zastupljenosti reversnih tipova u odnosu na Brigetio i Apulum (Grafikon 9-10).

Na nekropolama u Brigetiju najbolje su zastupljeni reversni tipovi grupe IIIa i b, zajedno sa 51%; slede grupa vojničkih tipova (19%), i grupe civilnih i opštih religioznih (IIIc) sa po 15%. Nekropola u Apulumu dala je slične rezultate: grupe IIIa i IIIb 49%, civilni tipovi 21%, vojni 17% i IIIc 13%. Na nekropoli Više grobalja, kao što je očito iz Tabele 9/10 i Grafikona 9/10, u daleko najvećem procentu zasupljeni su vojni tipovi (46% i 42%), dok je minimalna razlika zabeležena pri grupi IIIb i civilnim tipovima. Najveći broj primeraka vojnih tipova potiče iz perioda 193. do 244. godine a od toga većina pripada provincijskom kovanju Nikeje iz Bitinije.⁵⁸ Ne postoje bitne razlike u zastu-

57 Cf. Găzdac-Alföldy, Găzdac 2009: 168, Tab. II; 169, Fig. V-VI; 171, Fig. VII-VIII. Na nekropoli Više grobalja u obzir smo uzeli sve pronađene primerke u grobnim celinama, uključujući i provincijsko kovanje koje je zastupljeno u većem procentu (10,65%; cf. Tabela 4) i nije moglo biti isključeno iz statističke analize reversnih motiva.

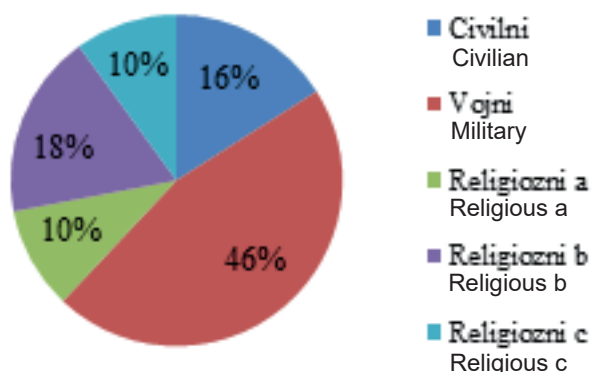

58 Za statističku analizu reversnih tipova autori su upotreбили samo primerke ranog carstva, odnosno do vladavine Trebonijana Gala (cf. Găzdac-Alföldy, Găzdac 2009: 168). Sa nekropole Više grobalja analizirali smo sve pronađene primerke novca, što bitno ne narušava mogućnost po-

similar results from Apulum in Roman Dacia, they came to the conclusion that the importance of the secondary symbolical meaning of the coin offering should not be overstated, although the data shows a deeper connection between the depictions on coins and the superstitions or the pious mentality of ordinary people.⁵⁶ Such analysis can be useful and the opinion is that there is a requirement to collect equivalent data from as many necropolises as possible, whose comparison would allow a better insight into whether the motifs of reverse depictions had an influence on burial rituals, and to what extent. In addition, if the existence of this connection was to be confirmed, the data regarding the differences and incidence of motifs in individual regions or provinces could be obtained.

As the necropolis of Više grobalja provides a much larger sample (52.47%), the option to employ a similar method was taken, which is, however, restricted by the nature of the research at Viminacium. Specifically, the rescue excavations which have, for decades, been conditioned by the needs of the surface coal mining operation, resulted in the necropolises being explored to a significantly higher degree, when compared to the military camp and the civilian settlement. For this reason, any comparison between the numismatic finds from the Viminacium necropolises and the settlement or the camp, do not come close to providing a true picture. This analysis will occupy future researchers, once the scope of the exploration of the civilian settlement and the camp has reached a similar extent to that of the necropolises. The only meaningful comparison of the incidence of reverse types at this stage of research can be derived from summarising the results of numismatic finds from graves and those from the layers of the sacrificial areas at the necropolis. The intention is to determine whether, and to what extent, there is a difference between the depictions on coins deposited in graves during burials and of those used later, on the occasion of visits to the graves or during regular annual memorial gatherings. The previously adopted summary of reverse types into groups was chosen to facilitate comparisons with the existing data from the ne-

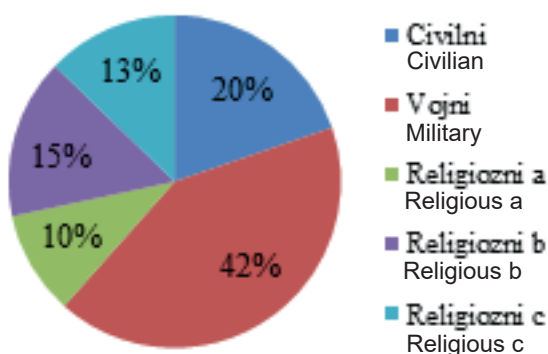

possible to determine the type of the reverse depiction, which amounts to 52.47%.

56 The incidence of religious types at both necropolises represents the largest percentage (cf. Găzdac-Alföldy, Găzdac 2009: 166-170).

*U Grafikonu 9 procentni su izraženi u zaokruženim vrednostima / In graph 9 all values are reduced to full number

Grafikon/Graph 9 - Procentualna zastupljenost grupa revesnih motiva iz grobova/Percentage of reverse motif thematic groups from graves*.

*U Grafikonu 10 procentni su izraženi u zaokruženim vrednostima / In graph 10 all values are reduced to full number

Grafikon/Graph 10 - Procentualna zastupljenost grupa revesnih motiva iz sloja/Percentage of reverse motif thematic groups from the layers*.

pljenosti revesnih tipova primeraka pronađenih u grobovima i onih u sloju na nekropoli, koje bi ukazivale na različitu ulogu motiva na novcima u pogrebnim ritualima prilikom sahrana i kasnijih prilikom daća (Grafikon 9-10). Veće odstupanje u zastupljenosti revesnih motiva uočava se između primeraka koji pripadaju I i II veku i onih nakon 193. godine. Dobijeni podaci o zastupljenosti grupa tipova prema vekovima predstavljeni su u Tabelama 11 i 12.

Zapaža se očita razlika u daleko manjoj zastupljenosti ili potpunom odsustvu pojedinih podgrupa religioznih tipova u III veku, a sa druge strane, u izuzetnom povećanju vojnih motiva. Za približno dve trećine manje su zastupljeni i civilni motivi. Reversni motivi primeraka iz grobnih celina koji potiču iz prva dva veka, jasno pokazuju

ređenja podataka, jer je broj primeraka nakon vladavine Trebonijana Gala mali (cf. Tabela 11, 12).

cropolises of Brigetio and Apulum.⁵⁷ Accordingly, the following groups of reverse types were selected: I – civilian, II – military, III – religious with three subgroups: IIIa – personifications of benevolence, IIIb – sacrifice/consecration/reverence, IIIc – general religious (Tables 9 and 10).

At the necropolis of Više grobalja, a total of 1595 coins were discovered within the graves (G and G1). Of that number, in 837 (or 52.47%) it was possible to determine the type of reverse depiction. In the layers of the sacrificial areas, the ustrinae and the space between the graves at

⁵⁷ Cf. Gázdac-Alföldy, Gázdac 2009: 168, Tab. II; 169, Fig. V-VI; 171, Fig. VII-VIII. At the necropolis of Više grobalja, all of the discovered specimens from graves were taken into consideration, including the provincial coinage that was present in a larger percentage (10.65%; cf. Table 4), which could not be excluded from the statistical analysis of the reverse motifs.

veliku zastupljenost religioznih podgrupa a i b (zajedno 26,80%). Ovaj procenat nešto je manji kod nalaza iz sloja (19,00%) (Tabele 11 i 12). Za ove motive bi se moglo reći da, za razliku od drugih grupa, mogu imati eshatološko značenje, kao izraz verovanja užaljenih članova porodice, koji su ih tokom rituala sahrane izabrali i postavili uz pokojnika ili koristili kasnije prilikom daća. Tokom III veka, ovi motivi gotovo da nestaju u grobnim celinama, dok sa druge strane narasta broj vojnih motiva, koji se teško mogu dovesti u vezu sa verovanjima u zagrobni život. Ovo je samo jedna od pojava koje su bile rezultat turbulentnih promena tokom III veka, a koje su zahvatile sve slojeve i segmente društva rimske države. Počev od vladavine Septimija Severa i dalje tokom III veka došlo je do poznatih spoljnih i unutrašnjih vojno-političkih događaja koji su negativno uticali na ekonomski razvoj i sa tim povezanom monetarnom politikom. Sve zajedno dovelo je do pada životnog standarda, koji je sa svoje strane nosio druge negativne posledice u životu običnih ljudi, kao što je bilo opadanje moralnih vrednosti i poverenja u stare običaje. Pojavila su se nova božanstva i kultovi u koje su se polagala nada u izbavljenje duše i tela. Analize iz Brigetija i Apuluma takođe potvrđuju povećanje procentualne zastupljenosti vojnih tipova u odnosu na religijske u III veku. Ali u oba slučaja to povećanje vojnih tipova ne

the necropolis, 1538 coins were discovered, out of which in 861 cases (or 55.98%), the type of reverse depiction was identified. In the case of both analyses, the finds from the necropolis of Više grobalja exhibit a completely different picture of the incidence of the reverse types compared to Brigetio and Apulum (Graphs 9 and 10).

At the necropolises of Brigetio, the most prevalent are the reverse types of group IIIa and b, with 51%, followed by the group of military types (19%), then civilian and general religious (IIIc), each with 15%. The necropolis of Apulum displayed similar results: groups IIIa and IIIb – 49%, civilian types – 21%, military – 17% and IIIc – 13%. At the necropolis of Više grobalja, as can be seen from Tables 9/10 and Graphs 9/10, by far the largest percentage of incidence are the military types (46% and 42%), whereas a minimal difference was recorded between group IIIb and the civilian types. The largest number of specimens of military types originates from the period between 193 and 244, the majority of which belongs to the provincial coinage of Nicaea from Bithynia.⁵⁸

⁵⁸ For the statistical analysis of the reverse types, the authors only used specimens from the early Empire, specifically up to, and including, the reign of Trebonianus Gallus (cf. Găzdac-Alföldy, Găzdac 2009: 168). From the necropolis of Više grobalja, all of the discovered coins were anal-

ugrožava zastupljenost religioznih tipova koji i dalje ostaju u konačnom procentu dominantni, za razliku od rezultata dobijenih sa nekropole Više grobalja.

There are no significant differences in the prevalence of reverse type specimens discovered in graves and those from the layers of the sacrificial areas at the necropolis, which would indicate a different role for motifs on coins in funerary rituals during burials to that during the subsequent commemorative repasts (Graphs 9 and 10). A larger discrepancy in the incidence of reverse motifs is discerned between the specimens from the 1st and the 2nd century and those after 193. If the gathered data were observed according to century, the following picture would be obtained:

An obvious difference can be observed in the far smaller incidence or the complete absence of certain subgroups of religious types in the 3rd century and, on the other hand, the significant increase in military motifs. Additionally, the civilian motifs are approximately two-thirds less frequent. The reverse motifs of specimens from the graves that originate from the first two centuries clearly demonstrate a large incidence of religious subgroups a and b (together 26.80%). This percent-

used, which does not significantly interfere with the comparison of data, since the number of specimens after the reign of Trebonianus Gallus is relatively small (cf. Tables 11 and 12).

ZAKLJUČAK

Pogrebnim ritualima južnih nekropola Viminacijuma, njihovim razvojem i promjenama, bavila se u nekoliko radova Lj. Zotović.⁵⁹ Prema autoru, nekropola Više grobalja korišćena je od strane stanovnika kanaba od druge polovine I do sredine III veka kada su promene u pogrebnim ritualima dovele do napuštanja nekropole i formiranja nove. Praktikovanje istovremenih obreda kremacije i inhumacije povezuje sa etničkom pripadnošću sahranjenih. Pri tome bi kremacije pripadale domorodačkom stanovništvu, a inhumacije doseljenicima iz istočnih oblasti Carstva. Na osnovu određenih nalaza u grobovima, kao i rituala vršenih nakon sahrana, autor zaključuje da je od kraja I pa do sredine III veka kod stanovnika Viminacijuma bilo zastupljeno stoičko i neoplatonističko verovanje u zagrobni život. Po ovim verovanjima, grob je predstavljao mesto u kome se duša, nakon izvesnog vremena, oslobađala od telesnih ostataka i odlazila u večnost, u podzemno carstvo Plutona. Veza između živih i duša umrlih nije se prekidala, jer je grob predstavljao mesto na kome je održavan kontakt prilikom redovnih daća. Zaradi većeg broja redovnih godišnjih daća i dužeg vremenskog korišćenja nekropole, iznad grobova formiran je značajan žrtveni sloj sa bogatim arheološkim materijalom.⁶⁰ Kako se ovi radovi odnose na pogrebne rituale u celini, od grobnih konstrukcija, svih priloga u grobovima, do žrtvenih površina i njihovog sadržaja, prirodno je da nalazima novca nije bila posvećena veća pažnja u odnosu na ostale.

Viminacijumskih nekropola dotakao se, u više svojih studija, i A. Jovanović. Isticao je da su sve populacije, na teritoriji Gornje Mezije u predrimskom periodu, gotovo isključivo praktikovale kremaciju kao način sahranjivanja. Polazeći od ove činjenice, zaključio je da pojava inhumacije, kao oblika sahranjivanja od I do III veka n.e., nije nastavak starije funeralne prakse, već da predstavlja stranu interpolaciju. Prilozi u grobovima kremiranih i inhumiranih pokojnika na Viminacijumu, pokazuju njihovu veliku sličnost po karakteru i kvalitetu. Ova činjenica bi ukazivala na manje ili više homogenu populaciju po pitanju ekonomskog i socijalnog statusa, kao i nivoa romanizacije. Što ponovo dovodi do pitanja korišćenja dve

age is somewhat smaller in finds from the layers of the sacrificial areas (19.00%) (Tables 11 and 12). It could be possible to assume that these motifs might, unlike other groups, have an eschatological meaning, as an expression of the beliefs of bereaved family members who had, during the burial ritual, chosen and deposited them along with the deceased or used them later, during re-pasts. During the 3rd century, these motifs practically disappear from graves, whereas, on the other hand, there is an increase in the number of military motifs, which are not generally associated with the belief in an afterlife. This is only one of the consequences resulting from the turbulent changes during the 3rd century, which affected all levels and segments of society in the Roman state. Starting from the reign of Septimius Severus and throughout the 3rd century, widely known external and internal military-political events occurred, which had a negative impact on economic development and monetary policy. These combined to reduce living standards which, in turn, brought about other negative consequences in the lives of ordinary people, such as the decline in both moral values and the trust in old customs. New deities and cults emerged which carried high expectations in terms of hope for the salvation of the soul and body. The analyses from Brigetio and Apulum also confirm an increase in the percentage of military types compared to religious types in the 3rd century. In both cases, however, this larger number of military types does not affect the incidence of religious types, which remain dominant in the final percentage, in contrast to the results obtained from the necropolis of Više grobalja.

CONCLUSION

The funerary rituals of the southern Viminacium necropolises, their development and changes, were considered by Lj. Zotović in several of her studies.⁵⁹ According to the author, the necropolis of Više grobalja had been used by the inhabitants of the *canabae* from the second half of the 1st to the mid-3rd century, when changes in funerary rituals resulted in the abandonment of the necropolis and the formation of a new one. The simultaneous practice of cremation and inhumation rites

60 Zotović 1986: 42-45; Zotović 2000: 9-12.

59 Zotović 1986: 41-60; 2000: 7-18; Zotović, Јордовић 1990: 1-34.

vrste pogrebnih rituala, koja je u najvećem broju slučajeva povezana sa različitim etničkim i kulturnim poreklom. Tako su kremacije povezane sa domorodačkim stanovništvom, dok su inhumacije odraslih individua pripisane doseljenicima iz istočnih provincija, čije je prisustvo evidentirano u epigrafskom materijalu i potvrđeno antropološkim analizama.⁶¹

Kao što je već rečeno, na nekropoli Više grobalja pronađen je ukupno 3161 primerak novca. Od tog broja, 1595 primeraka predstavlja grobne priloge (710 u G i 885 u G1), dok je u sloju na nekropoli koji podrazumeva žrtvene površine iznad pojedinačnih ili grupe grobova, pronađeno 1538 novčića.⁶² Bilo da se radi o kremacijama ili inhumacijama, prilozi u grobovima kao i materijal pronađen na žrtvenim površinama iznad njih, je istovrsan. Ovo navodilo na zaključak da su pogrebni rituali prilikom sahrana, kao i prilikom daća bili približno isti za oba načina sahranjivanja.⁶³ Nalazi novca iz grobova i sa žrtvenih površina, međutim, dovode u izvesnu sumnju navedenu činjenicu i otvaraju mogućnost postojanja izvesnih, doduše manjih, razlika u pogrebnim ritualima. Naime, od ukupnog broja otkrivenih grobova (3987 = G 2211 + G1 1776) novac kao prilog pronađen je u 33,74% slučajeva (1346 = G 621 + G1 725).⁶⁴ Na osnovu toga, jasno je da ne možemo reći kako je novac bio obavezan prilog u grobovima. Ovo nas, prirodno, vodi do pitanja funkcije novca kao priloga prilikom pogrebne ceremonije i kasnije prilikom redovnih daća. S. Stivens (S. Stevens) je u jednoj studiji, poredeći navode antičkih autora o ulozi koju su imali novci u grobovima, sa arheološkim dokazima, došla do zaključka da je tzv. »Haronov obol« samo jedan izraz mnogo šire funeralne upotrebe novca, koje ukazuju na bogatiji kontekst u kojem ih ne razumemo najbolje.⁶⁵

Grčki i latinski izvori, raspršeni u vremenu, prostoru i žanru, su jednoglasni da je novac u grobu povezan sa putovanjem u podzemlje. Nezavisno od izvesnih razlika u izlaganjima, antički izvori pominju običaj stavljanja jednog novca, niske

is associated with the ethnicity of the deceased, whereby cremations would belong to the indigenous population, and inhumations related to the settlers from the eastern regions of the Empire. Based on certain finds from graves, as well as the rituals practised after burials, the author concludes that from the late 1st to the mid-3rd century, among the Viminacium inhabitants, there was a stoic and neoplatonic belief in the afterlife. According to these beliefs, the grave represented a place where the soul would, after a certain time, free itself from the physical remains and depart into eternity, the underground realm of Pluto. The link between the living and the souls of the dead was not interrupted, as the grave represented a place in which contact was preserved on the occasion of the regularly held repasts. Due to a large number of recurrent annual repasts and the long-standing use of the necropolis, a significant sacrificial layer, rich in archaeological material, was formed above the graves.⁶⁰ Since these studies relate to the funerary rituals as a whole, from the grave constructions and all the grave goods, to the sacrificial surfaces and their contents, it is natural that the finds of coins did not receive any particular attention compared to the others.

The necropolises of Viminacium were also touched on by A. Jovanović in a number of his studies. He points out that all the populations of the territory of Upper Moesia, in pre-Roman times, almost exclusively practised cremation as a form of burial. From this, he concludes that the occurrence of inhumation, as a form of burial from the 1st to the 3rd century AD, does not signify a continuation of the older funeral practice, but rather it represents a foreign interpolation. The inventories in cremation and inhumation burials at Viminacium exhibit a great resemblance in character and quality. This fact would point to a more or less homogeneous population in terms of economic and social status, as well as the degree of Romanisation. This again raises the question of the use of two types of funerary rituals, which are, in most cases, associated with ethnic and cultural origin. Cremations are thus linked to the indigenous population, whereas the inhumation of adults is attributed to the settlers from the eastern provinces, whose presence is recorded in epigraphic material and confirmed by anthropological analyses.⁶¹

vrednosti, u usta pokojnika, odmah po smrti, kao taksu za prevoz preko Aherona ili Stiksa u podzemlje.⁶⁶ Običaj stavljanja novca u usta pokojnika potiče od verovanja u neophodnost plaćanja Haronu za prelazak u svet mrtvih. Inicijalno iz mediteranskog kulturnog kruga, proširio se u vreme rimskog carstva i na severo-zapadne provincije.⁶⁷ Pomenutu studiju S. Stevens, su u novijem radu dalje razvili A. Gazdac-Alefeldi i K. Gazdac (Á. Gázdac-Alföldy, C. Gázdac). Posvetili su se analizi književnih izvora sa tematikom mita o Haronu i tražili za njega potvrde u ikonografiji.⁶⁸ Zaključili su da je novac u grobovima u svakom slučaju povezan sa prelaskom u podzemlje i da je mogao biti namenjen Haronu, Eaku ili nekom drugom demonu podzemlja, već prema ličnoj fantaziji. Takođe, naglašavaju da je, bez obzira na mesto nalaza u grobu, ritual ili nominal, novac uvek povezan sa mitom o skeledžiji. A da se ove razlike mogu objasniti različitim lokalnim običajima, ličnim sujeverjima, modom, itd.⁶⁹

Ne ulazeći na ovom mestu u raspravu o mitu o Haronovom obolu, slažemo se sa tvrdnjama pomenutih autora da je novac u grobu povezan, na ovaj ili onaj način, sa putovanjem na drugi svet, mada sa izvesnom zadržkom u vezi mišljenja da su u svakom slučaju povezani sa mitom o skeledžiji. Pojedinačni primerici novca u grobovima svakako se mogu dovesti u vezu sa namenom plaćanja za prelazak u podzemlje, ali u nekim primerima možemo govoriti o novcu namenjenom za „troškove“ na drugom svetu (kao što bi bili npr. *marsupium* ili *crumina*). Međutim, šta reći za grobove koji nemaju novac za prilog? Kao što je već primetila S. Stevens, postoji nesklad između izveštaja antičkih izvora koji definišu tzv. »Haronov obol« i arheoloških dokaza, što potvrđuju i nalazi sa nekropole Više grobalja (samo trećina grobova imala je novac kao prilog). Kod ove trećine, istina je da je u najvećem procentu (91,95% u G i 82,07% u G1) registrovano prisustvo jednog primerka novca male vrednosti.⁷⁰ Drugo veliko odstupanje u odnosu na tvrdnje antičkih izvora, ogleda se u mestu nalaza novca – samo trećina ovih primeraka je bila položena u usta pokojnika

As already mentioned, a total of 3161 coins were discovered at the necropolis of Više grobalja. Of this number, 1595 specimens represent grave goods (710 in G and 885 in G1), whereas in the layers of the sacrificial areas above individual and group graves at the necropolis, 1538 coins were discovered.⁶² Regardless of whether these were cremations or inhumations, grave goods along with the material discovered in sacrificial surfaces above the graves are homogenous. This would lead to the conclusion that the funerary rituals performed during both forms of burial were quite similar to those performed during repasts.⁶³ The coin finds from graves and sacrificial surfaces, however, introduce some degree of doubt regarding the aforementioned fact and raise the possibility of the existence of certain, although small, differences in funerary rituals. Specifically, of the total number of discovered graves (3987 = G 2211 + G1 1776), coins as grave goods were discovered in 33.74% of cases (1346 = G 621 + G1 725).⁶⁴ On the basis of this, it is clear that it cannot be asserted that coins represented a compulsory component of grave inventories. This inevitably raises the question regarding the function of coins as grave goods in the process of the burial ceremony, and later in the regularly held repasts. S. Stevens, in one of her studies, by comparing citations from ancient authors with regard to the role of coins in graves to archaeological evidence, reached the conclusion that the so-called "Charon's obol" is merely one expression of a much wider funerary use of coins, indicating a richer context in which their use is not sufficiently clear.⁶⁵

Greek and Latin sources, deriving from a variety of times and places and of different genres, are unanimous in their conclusion that coins in the grave relate to the journey to the underworld. Regardless of certain differences in their accounts, ancient sources make reference to the custom of placing a single low-value coin into the mouth of the deceased, immediately after death, as a tax for their transportation across the

65 Stevens 1991: 215.

(ili 32,60%, odnosno 1/6 grobova koji su sadržavali novac). Ostali novac u grobovima sa inhumacijom (67,40%) nađen je na različitim mestima, pri tome drugo mesto po zastupljenosti predstavlja predeo glave ili oko glave (26,10%). Novac je pored toga, nalažen i pored ruku ili nogu, na grudima ili između nogu.⁷¹ U grobovima sa dva i više novčića kao prilogom, oni su bili raspoređeni svuda oko tela pokojnika, s tim što se uočava ponovna najveća prisutnost novca u predelu glave (oko glave ili u ustima).⁷²

Ako i izuzmemo odstupanje vezano za položaj novca u grobu, s obzirom na već iznetu tvrdnju da je novac u grobu povezan sa putovanjem u podzemlje (kao tzv. „Haronov obol“, *marsupium* ili *crumina*), ostaje dilema u vezi 2/3 grobova na nekropoli Više grobalja koji uopšte nisu imali novac kao prilog. Pri tome ne treba izgubiti iz vida da je ova pojava zastupljena kod oba pogrebna rituala, odnosno kod domorodačkog romanizovanog stanovništva, kao i kod pridošlica iz istočnih provincija.⁷³ Iz navedenog proizilazi da je tzv. »Haronov obol« predstavljao ritual poštovan samo od dela populacije na Viminacijumu. Izgleda da je običaj bio bolje ukorenjen u kolektivnu svest domorodačkog stanovništva, s obzirom da je novac prisutniji u grobovima sa kremacijom (42,82%) nego u grobovima inhumiranih pokojnika (28,08%).⁷⁴

Nalazi novca sa žrtvenih površina na nekropoli Više grobalja otvaraju još jedno pitanje funeralne upotrebe novca prilikom redovnih daća. Ne može se zanemariti činjenica da je približno isti broj novčića pronađen u grobovima (1595) i u sloju na nekropoli koji uglavnom predstavljaju nalaze sa žrtvenih površina iznad grobova (1538). Ova pojava upućuje na postojanje raznolikosti u funeralnoj upotrebi novca: grobovi koji su imali novac

Acheron or Styx to the underworld.⁶⁶ This custom originates from the belief that it was necessary to pay Charon for the transition to the world of the dead. Initially from the Mediterranean cultural circle, at the time of the Roman Empire it spread to the north-western provinces.⁶⁷ The aforementioned work of S. Stevens was further developed by Á. Gázdac-Alföldy and C. Gázdac in their more recent work. They focused on analysing literary sources with subject matter regarding the myth of Charon and sought verifications of it in iconography.⁶⁸ They concluded that coins in graves are, undoubtedly, connected with the transition into the underworld and could have been intended for Charon, Aeacus or some other demon of the underworld, based on an individual's belief. Also, they underline that irrespective of the position of the finds in the grave, the ritual or the denomination, coins are always associated with the myth of the ferryman, and that these distinctions can be explained by different local customs, personal superstitions, fashion, etc.⁶⁹

Without debating, at this point, the myth of Charon's obol, we concur with the assertions of these authors that coins in the grave relate, one way or another, to the journey to the other world, although with some reservations regarding the opinion that in every case they are associated with the myth of the ferryman. Individual coins in graves could unquestionably be connected to the purpose of payment for the transition to the underworld, although in some instances they could be considered as coins intended for "expenses" in the other world (as in the example of *marsupium* or *crumina*). However, what can be concluded from graves containing no coins as grave goods? As already noted by S. Stevens, there is a discrepancy between the accounts of ancient sources that define the so-called "Charon's obol" and archaeological evidence, which is further confirmed by the finds from the necropolis of Više grobalja (only a third of the graves had coins in their inventory). In this third, the fact is that in the highest percentage (91.95% in G and 82.07% in G1) the presence of a single coin of low

71 Cf. Slika 1, Grafikon 7.

72 Cf. Tabela 6. Sličnu sliku pokazuju i nalazi iz grobova između tokova Rajne, Mozela i Some; cf. Gorecki 1975: 202-223, Abb. 1-12.

73 Deo grobova inhumiranih pokojnika antropoloških tipova mediteranskog porekla, sa siromašnijim prilozima ili bez njih pripada verovatno i ranim hrišćanima (čija su verska ubeđenja zahtevala skromnu sahranu) i robovima. Dok bi inhumacije sa dinarskim i tzv. "praistorijskim" antropološkim tipom (proizašlim iz autohtonog etničkog supstrata) sugerisali na domorodačko stanovništvo niskog društveno-ekonomskog statusa, koje nije sebi moglo obezbediti sahranu kremiranjem (cf. Jovanović 2006: 26-28).

Grafikon/Graph 11 – Zastupljenost carskog i provincijskog kovanja u grobovima (G i G1) prema vladarima./Presence of the imperial and provincial coinage from graves (G and G1), according to emperors. carsko = imperial; provincijsko = provinc

value was registered.⁷⁰ Another large discrepancy in relation to the ancient sources is reflected in the location of the coin finds – only a third of these specimens were placed in the mouth of the deceased (or 32.60%, or 1/6 of graves which contained coins). Other coins in inhumation burials (67.40%) were discovered in a variety of places, with the second position, in terms of incidence, in the region of or around the head (26.10%). In addition, coins were also located near arms or legs, on the chest or between the legs.⁷¹ In graves with two or more coins in their inventory, they were positioned everywhere around the body of the deceased, although again the largest presence of coins is observed in the head region (around the head or in the mouth).⁷²

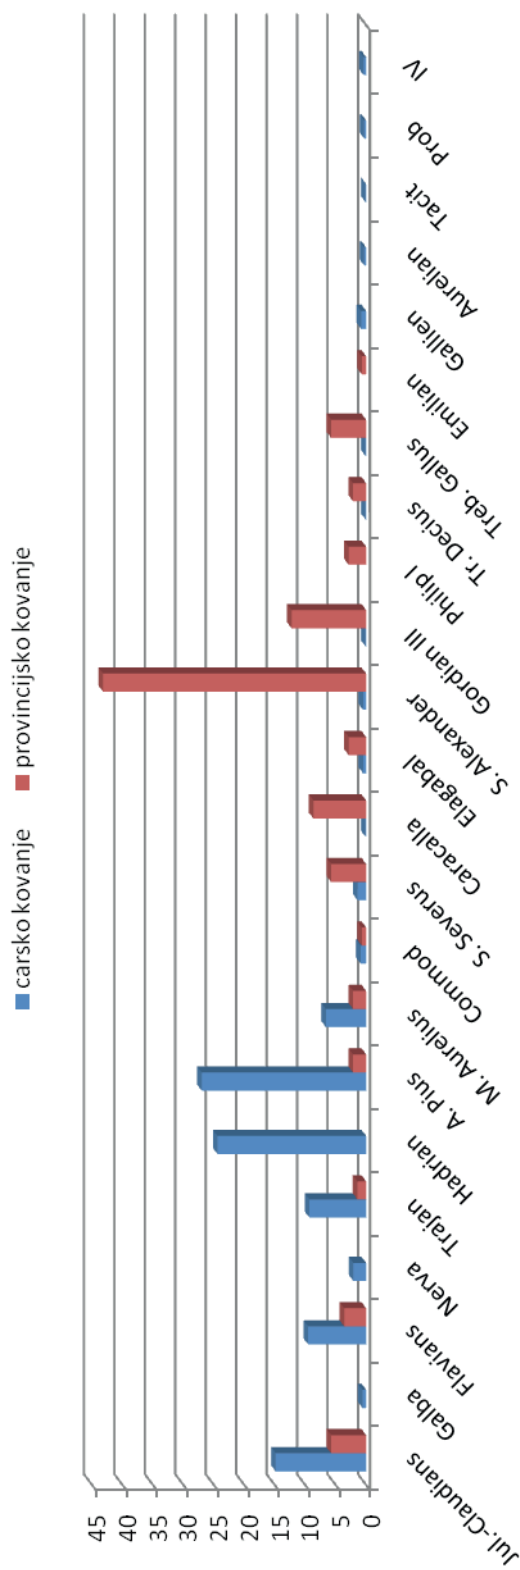

If the discrepancy relating to the positioning of coins in the grave is disregarded, and considering the already mentioned assertion that the coins in the grave are associated with the journey to the underworld (the so-called “Charon’s obol”, *marsupium* or *crumina*), a dilemma remains with regard to 2/3 of the graves at the necropolis of Više grobalja which did not contain any coins in their inventory whatsoever. Also, it should not be ignored that this situation is present in the funerary rituals of both the indigenous, Romanised population, as well as the settlers from the eastern provinces.⁷³ It follows, therefore, that the so-called “Charon’s obol” represented a ritual practised by only a portion of the population at Viminacium. It appears that the custom was more firmly rooted in the collective consciousness of the indigenous population, given that coins were more common in cremation burials (42.82%) than

⁷⁰ Cf. Tables 4-5, Graphs 5-6.

⁷¹ Cf. Figure 1, Graph 7.

⁷² Cf. Table 6. A similar picture is apparent from finds from graves between the Rhine, Moselle and Somme rivers; cf. Gorecki 1975: 202-223, Abb. 1-12.

⁷³ A proportion of the graves with inhumed deceased of the anthropological types of Mediterranean origin, containing poor or no inventory, also probably belong to the early Christians (whose religious beliefs required a modest funeral) and to slaves. The inhumations of the Dinara and the so-called “prehistoric” anthropological type (deriving from the indigenous ethnic substrate) would suggest an indigenous population of a low socio-economic status, having no means to ensure a cremation burial for themselves (cf. Jovanović 2006: 26-28).

Grafikon/Graph 12 - Zastupljenost carskog i provincijskog kovanja iz sloja prema vladarima/Presence of the imperial and provincial coinage from layers according to emperors.

in inhumations (28.08%).⁷⁴

The coin finds from the sacrificial surfaces at the necropolis of Više grobalja raise another question regarding the funerary use of coins during the regular repasts. It cannot be disregarded that approximately the same number of coins were discovered in graves (1595) as were in the layers of the sacrificial areas at the necropolis which consist mainly of finds from sacrificial surfaces above the graves (1538). This suggests the existence of a diversity in the funerary use of coins: graves which contained coins in their inventory deposited during the funeral, the same again but which also had a personal or shared sacrificial surface above with coins in it, or graves with no coins in their inventory, but with some coins above the grave which were subsequently deposited on the sacrificial surface during repasts. These are some of the most common occurrences, in addition to which, the situations with more coins in the grave or on the sacrificial surface should also be considered. There are instances where above several graves (2–3, or even 60 in the case of *culina*) a sacrificial surface was formed and, consequently, in such situations it is difficult to determine which graves certain coins from the sacrificial surface belong to.

An illustrative example of this complex situation is one of the *culinae* from the necropolis of Više grobalja, measuring 27.20 x 7.70–8.40 m. It was constructed above a group of 41 inhumation and 20 cremation burials, at the time of the last funeral of this group of people, at the end of the 2nd or the beginning of the 3rd century.⁷⁵ Prior to its construction, regular repasts were performed above some of the graves, and thus a sacrificial layer was formed. Above these sacrificial surfaces, a massive timber structure was made that was set on fire, the embers of which were covered with a layer of soil that baked due to the high temperature. This resulted in a compact layer of baked soil being formed, up to 60 cm thick. Repasts were performed on this surface for all the deceased buried below. These activities gave rise to the formation of a new sacrificial surface in which, alongside the hearth and canteen, a diverse range of material was discovered: food preparation vessels, incense burners, oil lamps, animal bones, bronze and bone pins, keys, coins, etc. The coin finds were recorded on the initial sacrificial surfaces, prior to the addition of the *culina* (141

⁷⁴ Cf. Table 3 and Graph 1.

⁷⁵ Зотовић, Јордовић 1990: 14-34, Fig. 7-14.

kao prilog prilikom sahrane, isti takvi koji su imali i sopstvenu ili zajedničku žrvenu površinu iznad sa novcem, ili grobovi koji nisu imali novac kao prilog, a imaju ga iznad, priloženog kasnije prilikom daća na žrtvenoj površini. Ovo su neke od najčešćih pojava, pored toga, treba imati u vidu i situacije sa više novčića u grobu, ili na žrtvenoj površini. Postoje i slučajevi u kojima je iznad više grobova (2-3 ili čak 60 u slučaju kulina) formirana žrtvena površina, te je u ovim situacijama teško odrediti kojim grobovima pripadaju određeni novci sa žrtvene površine.

Ilustrativni primer, ovakve složene situacije, predstavlja jedna od kulina sa nekropole Više grobalja, dimenzija 27,20 x 7,70-8,40m. Konstruisana je nad grupom od 41 groba sa inhumiranim i 20 kremiranih pokojnika, formirana u vreme poslednje sahrane ove grupe ljudi, krajem II ili početkom III veka.⁷⁵ Do njenog nastanka su iznad pojedinih grobova obavljane redovne daće i na taj način je već bio formiran izvestan žrtveni sloj. Iznad ovih žrtvenih površina načinjena je masivna drvena konstrukcija koja je zapaljena i u uzarenom stanju bila pokrivena slojem zemlje koji se zapekao usled visoke temperature. Na ovaj način formiran je kompaktni sloj zapečene zemlje debljine i do 60 cm, nakon čega su se na ovoj površini vršile daće za sve pokojnike sahranjene ispod. Ove aktivnosti rezultovale su formiranjem nove žrtvene površine, na kojoj je pored ognjišta i menze pronađen raznovrstan materijal: posude za pripremu hrane, kadionice, žiči, životinjske kosti, koštane i bronzane igle, ključevi, novac, itd. Nalazi novca zabeleženi su na prvoformiranim žrtvenim površinama, pre formiranja kuline (141 kom.), kao i u sloju iznad nje (168 kom.).⁷⁶ Za novce priložene prilikom daća u prvoformiranim žrtvenim površinama može se reći kojem grobu ili grupi grobova pripadaju. Sa druge strane, za nalaze u sloju iznad kuline ne možemo biti sigurni, jer je i u vreme vršenja daća bilo nemoguće tačno odrediti mesto pojedinih grobova ispod kuline.

Od 41 groba sa inhumiranim pokojnicima ispod kuline, uključujući i jednu dvojni, jednu trojni, kao i četiri sekundarne sahrane lobanja, samo 13 grobova imalo je jedan novčić kao prilog

⁷⁵ Зотовић, Јордовић 1990: 14-34, Sl. 7-14.

⁷⁶ Ovi brojevi ne uključuju po 4 primeraka IV veka pronađenih u oba žrtvena horizonta. Novac IV veka potiče sa mesta na kojima je kulina oštećena, verovatno nakon napuštanja nekropole prilikom neke kasnije nivelacije terena.

coins), as well as in the layer above it (168 coins).⁷⁶ For the coins deposited during the repasts on the initial sacrificial surfaces, it can be determined to which grave or group of graves they belong. For the finds from the layer above the *culina*, however, it is unclear since even at the time of repasts it was impossible to accurately determine the position of individual graves below the *culina*.

Of 41 inhumation burials below the *culina*, including a double, a triple and four secondary skull burials, only 13 graves contained a single coin in their inventory (or 31.70% of graves). In the case of cremation burials, from a total of 20, including a double burial, 6 graves contained a single coin in their inventory and one grave had two coins (together representing 35.00% of the graves). From this it can be concluded that in 61 graves below the *culina*, only 21 coins were discovered placed in graves during the funerals, whereas again a somewhat larger incidence of coins as grave goods is recorded in cremation burials. On the other hand, on the sacrificial areas above and below the *culina*, a total of 309 coins were discovered, some of which were located in hearths, where they had evidently been thrown during a repast.

From the aforementioned information, a far greater use of coins is initially discernible in the funerary practice during repasts compared to that during burials. However, one should bear in mind the fact that both sacrificial surfaces were used over a long period of time, most likely from the end of the 1st to the mid-3rd century.⁷⁷ If all the public holidays devoted to the dead, as well as the private ones are included, an assumption can be made that the family members of the deceased visited the grave at least 6 or 7 times a year and performed the appropriate rituals.⁷⁸

⁷⁶ These numbers do not include coins from the 4th century, 4 discovered in each of both the sacrificial horizons. The 4th century coins originate from the place where the *culina* was damaged, most likely after the abandonment of the necropolis during the subsequent levelling of the ground.

⁷⁷ The oldest coins from the graves below the sacrificial surfaces date from the end of the 1st century. The youngest, from the sacrificial surface above the *culina*, are dated to the mid-3rd century.

⁷⁸ The public holidays dedicated to the dead, registered in the Roman calendar, were the following: 1) *Dies Parentales*, lasting from 13–21 February, when the family mem-

(ili 31,70% grobova). U slučaju grobova kremiranih pokojnika, od ukupno 20, uključujući i jednu dvojni sahranu, 6 grobova imalo je jedan novčić za prilog i jedan grob dva novčića (ili 35,00% grobova). Dolazimo do toga da je u 61 grobu ispod kuline pronađen samo 21 primerak novca, položen u grobove prilikom sahrana. Pri čemu je ponovo zabeležena nešto veća zastupljenost novca kao priloga u grobovima kremiranih pokojnika. Sa druge strane, na žrtvenim površinama ispod i iznad kuline pronađeno je ukupno 309 primeraka novca, od kojih su se neki nalazili u ognjištima, gde su očito bili bačeni tokom daće.

Iz navedenog je, na prvi pogled, uočljiva daleko veća upotreba novca u funeralnoj praksi prilikom daća u odnosu na obrede prilikom sahrana. Međutim, treba imati u vidu činjenicu da su obe žrtvene površine korišćene tokom dužeg vremenskog perioda, najverovatnije od kraja I do sredine III veka.⁷⁷ Ako tome dodamo i sve državne praznike posvećene mrtvima, kao i one privatne, dolazimo do pretpostavke da su članovi porodice umrlog najmanje 6 do 7 puta godišnje posećivali grob i tamo obavljali propisane rituale.⁷⁸ U kojim prilikama su koristili novac prilikom ovih daća, ostaje nam nejasno. Ali s obzirom na dugotrajno korišćenje kuline (oko 150 godina), broj grobova 61, sve praznike posvećene mrtvima tokom tih godina i 309 primeraka novca pronađenih na kulini, proizilazi da u stvarnosti novac i nije tako često korišćen prilikom daća.

Ukupno posmatrano, među nalazima novca iz

77 Najstariji datovani primerci novca iz grobova ispod žrtvenih površina su sa kraja I veka. Najmlađi primerci na žrtvenoj površini iznad kuline datuju se u sredinu III veka.

78 Državni praznici posvećeni mrtvima, upisani u rimski calendar, bili su sledeći: 1) *dies parentales*, koji je trajao od 13.-21. februara, kada su se članovi porodice okupljali na grobu, poklonili senima pokojnika i prineli ponude; 2) *dies violae*, 22. marta, kada sun a grobove odnošene ljubičice; 3) *dies rosae*, nije bio tačno fiksiran praznik a odvijao se od maja do juna, kada su odnošene ruže na grobove; 4) *Lemuria*, održavane su 9., 11. i 13. maja, kada se verovalo da duše umrlih lutaju oko kuća. Prateći rituali bili su privatni i porodični i odvijali su se noću; 5) otvaranje mundusa (*mundus*) odvijalo se tri puta godišnje: 24. avgusta, 5. oktobra i 8. novembra. Tada su otvarana »vrata pakla« i duše umrlih su mogle na kratko da ustupe u svet živih. Druge prilike za odavanje počasti umrlim i posete grobovima bile su npr. rođendan ili godišnjica smrti (cf. Cumont 1922: 71-72; isti 1949: 45, 82-83, 396-398, 435-436; Hope 2007: 232-235).

On what occasions they used coins during the repasts, remains unknown. Nevertheless, given the long-standing use of the *culina* (about 150 years), the fact that there were 61 graves, all the holidays dedicated to the dead during those years and that 309 coins were discovered on the *culina*, it follows that in reality coins were not so frequently used during repasts.

Observed in general, among the coin finds from graves, including both imperial and provincial coinage, the most prevalent are those from the 2nd century. A noticeable deviation is reflected in the incidence of imperial coinage compared to provincial during the first half of the 3rd century, when the provincial rises to 72.44%, whereas the imperial declines to just 3.64%. Almost identical results were obtained for the coin finds from the layers of the sacrificial areas at the necropolis (Graphs 11 and 12).⁷⁹ These results point to certain conclusions with regard to the circulation of provincial coinage in Upper Moesia, particularly from the end of the 2nd and in the first half of the 3rd century. At the necropolis of Više grobalja, there is the highest number of finds of provincial coinage from the Nicaean mint (290), followed by the mint of Viminacium (59) and Stobi (31), whilst from other mints there are fewer.⁸⁰ From the time when there was a perceptible lack of small bronze coins in circulation, in the late 2nd century, the shortfall was filled by coinage from the Stobi mint (1 coin of Domitian and 30 of S. Severus and family). From the time of this mint's closure (during the reign of Caracalla), until the opening of the

bers gathered at the grave to honour the spirits of the deceased and made offerings; 2) *Dies Violae*, on 22 March, when violets were taken to the graves; 3) *Dies Rosae*, was not precisely fixed and took place any time between May and June, when roses were taken to the graves; 4) *Lemuria*, held on 9, 11 and 13 May, when it was believed that the souls of the dead wandered around the houses. The accompanying rites were private and for the family and took place at night; 5) the opening of the *mundus* took place three times a year: 24 August, 5 October and 8 November. At this time the "gates of hell" were opened and the souls of the dead could briefly enter the world of the living. Other occasions to pay respects to the dead and visit the graves were, for example, a birthday or the anniversary of a death (cf. Cumont 1922: 71-72; *id.* 1949: 45, 82-83, 396-398, 435-436; Hope 2007: 232-235).

79 Cf. Graphs 2-4.

80 Cf. *supra* ref. 13.

grobova, uključujući carsko i provincijsko kovanje, u najvećoj meri prisutni su primerci II veka. Osetno odstupanje odgleda se u zastupljenosti carskog kovanja u odnosu na provincijsko tokom prve polovine III veka. kada provincijsko narasta na 72,44% u odnosu na carsko koje opada na samo 3,64%. Gotovo identične rezultate dobili smo i za nalaze novca iz sloja na nekropoli (Grafikon 11-12).⁷⁹ Dobijeni rezultati upućuju na izvesne zaključke u vezi sa cirkulacijom provincijskog novca u Gornjoj Meziji, naročito od kraja II i u prvoj polovini III veka. Na nekropoli Više grobalja u najvećem procentu zastupljeni su nalazi provincijskog novca kovnice Nikeje (290), potom kovnice Viminacijum (59) i Stobi (31), dok su ostale kovnice malobrojnije.⁸⁰ Od vremena kada je došlo do osetnog pomanjkanja sitnog bronzanog novca u opticaju, krajem II veka, prazninu su popunila kovanja Stoba (1 kom. Domicijan, 30 S. Sever i porodica). Od vremena zatvaranja ove kovnice (u vreme Karakale), do otvaranja kovnice u Viminacijumu (oktobar 239. godine) dominiraju primerci kovnice Nikeje (1 kom. A. Pije, 6 Karakala, 6 Elagabal, 201 A. Sever, 1 Maksimin I, 38 Gordijan III, 1 T. Decije, 36 neodređenih).⁸¹ Otvaranje kovnice u Viminacijumu odmah se odrazilo na smanjen priliv novca Gordijana III iz Nikeje (Σ Nikeja 290, od toga Gordijan III 38 = 13,10%, prema Σ Viminacijum 59, od toga Gordijan III 34 = 57,63%). Nakon zatvaranja kovnice u Stobiju, a istovremeno sa najvećim prilivom novca Nikeje u Gornju Meziju, u Makedoniji su ponovo počeli sa kovanjem emisija autonomnog novca (Koinon Makedonije).⁸² Ove emisije, međutim, nisu imale većeg značaja u cirkulaciji na teritoriji Mezije. Na nekropoli Više grobalja zabeležen je samo jedan primerak autonomnog makedonskog kovanja iz ovog vremena, i to za Gordijana III. Najmlađi zabeleženi primerci provincijskog kovanja predstavljaju primerci Emilijana (253. godina) i Valerijana I (254/255. godina), oba iz viminacijumske kovnice.⁸³

79 Cf. Grafikon 2-4.

80 Cf. *supra* ref. 13.

81 Navedeni su svi primerci ove dve kovnice, pronađeni u grobovima i u sloju na nekropoli. Kod pojedinih vladara dodati su i primerci članova porodice kovani u njegovo vreme; cf. Vojvoda 2013: 155-196.

82 Borić-Brešković 2011: 415, ref. 3; 426; Vojvoda, Petrović 2011: 288-289; Vojvoda, Jesretić 2012: 117-134.

83 Primerak Emilijana pronađen je u grobu, a Valerijana I

mint in Viminacium (October, 239), coinage from the Nicaean mint dominates (1 coin of A. Pius, 6 of Caracalla, 6 of Elagabalus, 201 of Severus Alexander, 1 of Maximinus I, 38 of Gordian III, 1 of T. Decius and 36 undetermined).⁸¹ The opening of the mint in Viminacium had the immediate effect of reducing the influx of coinage of Gordian III from Nicaea (Σ Nicaea – 290, out of which Gordian III – 38 = 13.10%, in relation to Σ Viminacium – 59, out of which Gordian III – 34 = 57.63%). After the closure of the mint in Stobi, and the highest influx of coins from Nicaea into Upper Moesia, Macedonia once again started minting issues of autonomous coins (the Koinon of Macedonia).⁸² These issues, however, did not have any major significance within the circulation in the territory of Moesia. At the necropolis of Više grobalja, only one specimen of the autonomous Macedonian coinage from this time was noted, that of Gordian III. The youngest recorded examples of provincial coinage are those of Aemilian (dating from 253) and Valerian I (dating from 254/255), both from the mint of Viminacium.⁸³

Graphs 11 and 12 provide a clearer picture of the incidence of imperial and provincial coinage, both in graves as well as from the layers of the sacrificial areas, according to individual rulers or dynasties. An almost three times greater incidence of specimens of imperial coinage of the Julio-Claudian dynasty is observed in graves, in relation to the finds from the layers of the sacrificial areas at the necropolis (14.85–5.83%). This percentage difference is even higher in the specimens of provincial coinage of the same dynasty (5.75% in graves compared to 1.46% in the layers of the sacrificial areas). With regard to imperial coinage of the Flavian dynasty, the incidence in graves is approximately the same (9.52%) in relation to those from the layers (7.81%). However, a greater difference is observed in the specimens

81 Listed are all of the coins of these two mints discovered in graves and in the layers of the sacrificial areas at the necropolis. In the case of some rulers, coins depicting family members minted in their time were also added; cf. Vojvoda 2013: 155-196.

82 Borić-Brešković 2011: 415, ref. 3; 426; Vojvoda, Petrović 2011: 288-289; Vojvoda, Jesretić 2012: 117-134.

83 The coin of Aemilian was discovered in a grave, whereas that of Valerian I, in the layers of the sacrificial areas at the necropolis.

Iz Grafikona 11 i 12 jasnije se sagledava i zastupljenost carskog i provincijskog kovanja, kako u grobovima tako i u sloju, prema pojedinim vladarima ili dinastijama. Zapaža se skoro tri puta veća prisutnost primeraka carskog kovanja Julijejsko-Klaudijevske dinastije u grobovima, u odnosu na nalaze iz sloja na nekropoli (14,85% - 5,83%). Ovaj procenat je još veći kod primeraka provincijskog kovanja iste dinastije (5,75% u grobovima, u odnosu na 1,46% u sloju). Među carskim kovanjima Flavijejske dinastije zastupljenost u grobovima je približno ista (9,52%) u odnosu na primerke iz sloja (7,81%). Ali je se sa druge strane zapaža velika razlika kod primeraka provincijskog kovanja iz grobova ovog perioda (3,60%) naspram istih nalaza iz sloja (0,58%). U Trajanovim emisijama procenat zastupljenosti carskog kovanja u grobovima i sloju beleži minimalna odstupanja (9,32% u grobovima i 8,25% u sloju), dok provincijsko kovanje u sloju potpuno izostaje, u grobovima je zabeleženo sa samo 1,44%.

Najveću zastupljenost carskog kovanja u nalazima novca na nekropoli beleže primerci emitovani u vreme Hadrijana i Antonina Pija (zajedno 51,40% od svih nalaza iz grobova i 39,83% od nalaza iz sloja). Posmatrano pojedinačno emisije Hadrijana su nešto slabije zastupljene (24,40% u grobovima i 15,96% u sloju) u odnosu na emisije Antonina Pija (27,00% u grobovima i 23,87% u sloju). Kada je u pitanju provincijsko kovanje ovog perioda, treba napomenuti da u vreme Hadrijanove vladavine nije zabeležen ni jedan primerak, kako u grobovima, tako i u sloju. A tek minimalnim procentom su zastupljene izvesne emisije provincijskog kovanja za Antonina Pija (2,15% u grobovima i 1,46% u sloju). Nakon toga, u vreme Marka Aurelija i Komoda, očito je veliko opadanje u prisutnosti novca na nekropoli, kako u grobovima, tako i u sloju. Procenat carskog kovanja u grobovima drastično pada na 6,61% (M. Aurelije) i 0,90% (Komod). Nešto viši procenti beleže nalazi iz sloja: 9,02% (M. Aurelije) i 3,52% (Komod). Slično je i sa primercima provincijskog kovanja koja su približno podjednako zastupljena u grobovima i u sloju (2,15% M. Aurelije, 0,71% Komod u grobovima, prema 2,34% i 0,87% u sloju).

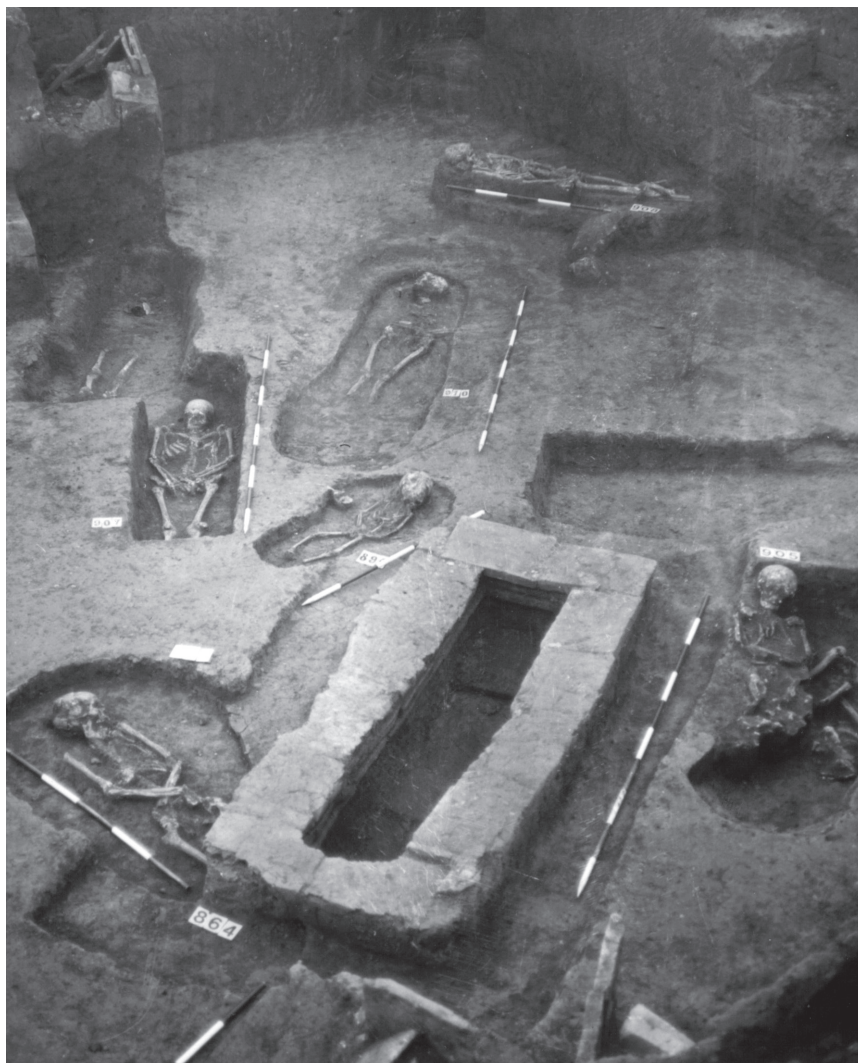

Carske emisije Septimija Severa su u grobovima zastupljene malim procentom (1,40%), za razliku od nalaza iz sloja, gde se pojavljuju u većem broju (9,68%). Njegova provincijska izdanja beleže približno iste vrednosti na oba mesta na

u sloju na nekropoli.

of provincial coinage from graves of this period (3.60%) compared to the same finds from the layers (0.58%). Regarding Trajan issues, the percentage of incidence of imperial coinage in graves and the layers of the sacrificial areas shows minimal deviations (9.32% in graves and 8.25% in the layers), while there is a complete lack of provincial coinage in the layers, with only 1.44% noted in the graves.

The highest incidence of imperial coinage among the coin finds at the necropolis is recorded in the specimens issued at the time of Hadrian and Antoninus Pius (collectively, 51.40% of all finds from graves and 39.83% of finds from the layers of the sacrificial areas). Individually observed, the issues of Hadrian are somewhat less prevalent (24.40% in graves and 15.96% in the layers) compared to the issues of Antoninus Pius (27.00% in graves and 23.87% in the layers). In terms of provincial coinage of this period, it should be noted that from the reign of Hadrian, not a single specimen was recorded, neither in graves, nor in the layers of the sacrificial areas and only a minimal percentage of certain issues of provincial coinage of Antoninus Pius were observed (2.15% in graves and 1.46% in the layers). Thereafter, at the time of Marcus Aurelius and Commodus, there is an obvious decline in the presence of coins at the necropolis, in both graves and the layers of the sacrificial areas. The percentage of imperial coinage in graves drastically drops to 6.61% (M. Aurelius) and 0.90% (Commodus). Somewhat higher percentages are recorded in the finds from the layers of the sacrificial areas: 9.02% (M. Aurelius) and 3.52% (Commodus). The situation is similar with the specimens of provincial coinage, which are almost equally prevalent in both (2.15% M. Aurelius and 0.71% Commodus in graves compared to 2.34% and 0.87% respectively in the layers of the sacrificial areas).

The imperial issues of Septimius Severus in graves are present in a small percentage (1.40%), in contrast to the finds from the layers of the sacrificial areas, where they appear in a larger number (9.68%). His provincial issues exhibit approximately the same number in both locations of finds (5.75% in graves and 6.15% in the layers). After the end of the reign of Septimius Severus, through to the youngest specimens, the imperial issues discovered in graves are present in a minimal percentage (0.10–0.80%). The same coin issues, discovered in the layers of the sacrificial areas, appear in somewhat larger percentages

Više grobalja, situacija na nekropoli tokom iskopavanja / Više grobalja, situation at the necropolis during excavations

laza (5,75% u grobovima i 6,15% u sloju). Nakon vladavine Septimija Severa pa sve do najmlađih primeraka, carska izdanja pronađena u grobovima, zastupljena su minimalnim procentima (od 0,10-0,80%). Ista izdanja, pronađena u sloju, pojavljuju se u nešto većim procentima u odnosu na nalaze iz grobova, zaključno sa vladavinom Aleksandra Severa (Elagabal 2,31%, A. Sever 5,17%). Nakon toga beleži se minimalna zastupljenost (od 0,11-0,44%). Za razliku od carskog kovanja, provincijsko se pojavljuje znatno češće u periodu od vladavine S. Severa do Gordijana III, kako u grobovima tako i u sloju na nekropoli. Najveća zastupljenost provincijskih emisija zabeležena je tokom vladavine Aleksandra Severa (43,20% u grobovima i 51,50% u sloju), a potom i za vre-

in relation to the finds from graves, up to and including the reign of Severus Alexander (Elagabalus 2.31%, Severus Alexander 5.17%). Thereafter, a minimal incidence is recorded (0.11–0.44%). Unlike imperial coinage, provincial is much more frequent in the period from the reign of S. Severus until Gordian III, both in the graves and the layers of the sacrificial areas at the necropolis. The highest incidences of provincial issues are recorded for the period during the reign of Severus Alexander (43.20% in graves and 51.50% in the layers of the sacrificial areas), and then at the time of Gordian III (12.25% in graves and 19.60% in the layers). The youngest specimen of provincial coinage in a grave originates from the reign of Trebonianus Gallus, whilst among the finds from

me Gordijana III (12,25% u grobovima i 19,60% u sloju). Najmlađi primerak provincijskog kovanja u grobu je iz vremena vladavine Trebonijana Gala, dok je među nalazima iz sloja zabeležen i jedan kovan za Valerijana I.

Analiza nalaza novca sa nekropole Više grobalja predstavlja samo deo ukupno pronađenih numizmatičkih nalaza na svim, do sada istraženim, viminacijumskim nekropolama. Nadamo se da će neka pitanja o ulozi novca u pogrebnim ritualima na Viminacijumu, koja su ovom prilikom ostala otvorena, biti bar delimično odgonetnuta budućim analizama nalaza novca sa drugih nekropola ovog značajnog lokaliteta. Iz do sada navedenog, možemo reći, da je uloga novca u pogrebnim ritualima na nekropoli Više grobalja, komplikovanija nego što se to, možda, na prvi pogled činilo. Razloge za različite načine upotrebe novca (ili njegovog odsustva) prilikom sahrana i kasnije prilikom daća, treba verovatno tražiti u šarenilu viminacijumskog stanovništva. Kompleksnijim interdisciplinarnim pristupom u tumačenju viminacijumskih nekropola, trebalo bi uzeti u obzir brojne faktore, u svim slučajevima gde je to moguće.⁸⁴ Neki od njih bili bi: utvrđivanje porekla, pola, starosti, ekonomskog statusa pokojnika, sa tim povezati različite rituale sahranjivanja, uzeti u obzir hronološke okvire i tadašnja istorijska događanja u celini i posebno u ovom delu Carstva (kao što su npr. prodor novih religioznih kultova, moda, itd.). Na taj način bi se verovatno približili boljem razumevanju pogrebnih rituala praktikovanih na Viminacijumu, mada bi neke nedoumice zasigurno i dalje ostale skrivene i nedovoljno jasne.

the layers of the sacrificial areas a coin minted for Valerian I was recorded.

The analysis of coin finds from the necropolis of Više grobalja represents only a part of all the discovered numismatic finds from all the currently investigated necropolises of Viminacium. Hopefully, the questions raised regarding the role of coins in the funerary rituals at Viminacium which have, to date, remained unanswered, will be at least partially answered by the future analyses of coin finds from other necropolises of this significant site. From what has been learnt thus far, it can be said that the role of coins in funerary rituals at the necropolis of Više grobalja is more complex than it might initially have appeared. The reasons for the different use of coins (or their absence) in burials, and subsequently in repasts, should probably be sought in the wide diversity of the Viminacium population. By employing a more complex interdisciplinary approach to interpreting the necropolises of Viminacium, numerous factors should be taken into account in all cases where possible.⁸⁴ These would include: the determination of origin, sex, age and economic status of the deceased and their links to the various burial rituals, the consideration of the chronological frameworks and the wider historical events and those particular to this part of the Empire (such as the incursion of new religious cults, trends, etc.) In this way it would be possible to develop a better understanding of the funerary rituals practised at Viminacium, although some facts would surely still remain obscure and insufficiently clear.

⁸⁴ U ovom pogledu od naročite važnosti je završna obrada antropoloških ostataka i njihova interpretacija.

⁸⁴ In this regard, the final processing of the anthropological remains and their interpretation is of particular importance.

CATALOGUE

NOTES TO THE CATALOGUE

Katalog je uređen hronološki prema vladavinama pojedinih careva. / The catalogue is arranged chronologically according to the reigns of the Roman emperors.

Katalog sadrži sledeće podatke / Catalogue contains the following data:

Kolona/Column 1 – Redni broj kataloga / Catalogue number.

Kolona/Column 2 – Aversna legenda i opis aversne predstave / Obverse legend and description.

Kolona/Column 3 – Reversna legenda i opis reversne predstave / Reverse legend and description.

Kolona/Column 4 – Težina / Weight (gr); Prečnik / Size (mm); Osa / Axis (sides of the World)

Kolona/Column 5 – Nominal / Denomination; cf. Skraćenice/Abbreviations.

Kolona/Column 6 – Mesto nalaza / Position of find; cf. Skraćenice/Abbreviations.

Kolona/Column 7 – Referenca / References.

Kolona/Column 8 – Datovanje / Date

Kolona/Column 9 – Broj inventara (C – broj) i napomena (npr.: polomljen, probušen, cmk. i sl.) / Inventory number (C – number) and additional information (for example: broken, perforated, cmk. etc.).

(Footnotes)

1 Pod ovim terenskim inventarnim brojem evidentiran je jedan komad bronzanog novca. U koverti je, međutim, prilikom popisa pronađeno 12 primeraka bronzanog novca. Kako sa sigurnošću ne možemo tvrditi koji je od njih predstavljao originalni nalaz, svih 12 primeraka svrstani su u kategoriju "novac bez podataka".

1 Under this no. was registered one pieces. In envelope we found 12 pieces of coins. How we can't be sure which coin is original one, all 12 pieces were classified as »coins without data«.

Tabela 2
Pregled nalaza novca iz sloja po C brojevima.
Table 1 – Coins from Layers according Vim. Coll.
no. (C – no).

* izgubljen/missed

** uništen prilikom procesa konzervacije / de-
stroyed during process of conservations

*** nije konzerviran/hasn't conserved
