A HOARD OF ROMAN COINS FROM ČORTANOVCI IN SREM

Abstract: The hoard of Roman coins from Čortanovci in Srem contains 2,457 denarii, one Lycian drachma and one drachma minted in the mint of Amisus, in Pontus. The oldest coins in the find are the denarii of Marcus Antonius/Nero, and the latest, those of Septimius Severus and Caracalla under Severus. The *terminus a quo* of the deposition of the find is provided by the denarii belonging to issue 1 (Jan.) – one denarius of Severus, and the Special Issue (Victories in Britain 2) – two denarii of Severus and one of Caracalla, all dated to 210. As the hoard did not reach the National Museum in its entirety, the possibility remains open for a somewhat later dating. The cause for the deposition of this large find should probably be sought in some reasons that could have been influenced by Severus' internal policy.

Key words: Roman Empire, hoard of coins, Principate, Septimius Severus, Čortanovci, Lower Pannonia

In early 1933, the National Museum in Belgrade purchased the major part of a find of silver Roman coins, originating from the village of Čortanovci in Srem. The money was found on the property of Petar Krasojević on December 16, 1932, about which the chief of the Stara Pazova district, already on December 19, informed the Royal Banking Authority in Novi Sad with a request that "the state museum be informed about the above said, since they might be interested in this old money." Through

the Interior Ministry, the letter reached the Education Ministry of the Kingdom of Yugoslavia, which forwarded it to the National Museum in Belgrade (then the Museum of History and Art/Historijsko-umetnički muzej). In the document, it was written that, on December 16, 1932, Petar Krasojević was extracting an old walnut tree in his yard and, on that occasion, discovered a pot of silver Roman coins weighing four kilograms.¹ In the old inventory of the Museum (*Inventory of Items, Book 2*), the find is registered under ordinal number 3584 for the year 1933. From the account of Dr. Jozo Petrović in this inventory and, after that, the *Yearbook of the Serbian Royal Academy/Godišnjak Srpske kraljevske akademije* 42 (1933), Belgrade 1934, on page 255, we learned that the management of the Museum obtained the hoard of coins by means of a loan for purchasing a property in Gradsko. However, the data about the number of purchased coins is approximate. The old inventory noted that around 2,300 pieces were bought,² while M. and D. Garašanin wrote about 2,500 pieces,³ which is closer to the factual state. The hoard was subsequently re-inventoried, when it was found that it contains 2,457 denarii and two drachmae.⁴ It covers the period from Marcus Antonius/Nero to Septimius Severus and Caracalla under Severus.⁵

The Roman treasure from Čortanovci represents the third known hoard from the territory of Lower Pannonia from this period, besides the Karajenon and Mendén finds.⁶ Generally speaking, the small number of coin hoards in both Pannonias

1 The article published in the *Politika* daily immediately after the discovery of the hoard, in December 1932, states the name of Nikola Mundžić, a blacksmith, who, while extracting an old walnut tree on the property of Petar Krasojević, a steward from Čortanovci, found underneath one of the main roots, half a metre underground, an earthenware pot full of silver coins. The pot, made of baked earth with a bottom and an opening of 10 centimetres in diameter, and very wide in the middle, contained four to five kilograms of money. R. Bunardžić localised the place of the find next to the present-day cemetery, relying on D. Popović's reconnoitering report (documentation of the Provincial Bureau for the Protection of Cultural Monuments in Novi Sad, Inv. No. 4461; E-255/B) which reads that "a pot full of silver money and gold bars were found in the yard of the late P. Krasojević, near the new village cemetery" (according to Bunardžić 2006: 47, n. 29). However, there is no mention of the gold bars in the information of the Interior Ministry of the Kingdom of Yugoslavia, which was sent to the Ministry for Education and the National Museum in Belgrade.

2 The *Politika* daily reported a similar thing in its issue of April 1, 1933, in a text on page 10, which reads that around seven kilograms of treasure, or around 2,300 pieces, arrived in the National Museum, while the rest were stolen.

3 M. and D. Garašanin cite 1933 (sic!) as the year of the unearthing of "a Roman treasure of 2,500 denarii coins" (Гарашанин и Гарашанин 1951: 223).

4 Reinv. – o. inv. 1114/1-2459.

5 The same article in *Politika* of April 1, 1933, reads that the latest pieces in the hoard are from the time of Caracalla. This information is also found in subsequent brief reports about the find (Петровић 1934: 255; Mimik 1981: 61, no. 161; Даугтова-Рушевљан 1981: 64, no. 3; Даугтова-Рушевљан 1995: 129-130; Borić-Brešković 1994: 41 no. 45), which had led to a little confusion regarding the latest coins, which, besides Severus, also belong to Caracalla, but were minted under Septimius Severus and not during Caracalla's sole rule. After the conservation and a detailed study of the material, it turned out that the note by S. Dušanić, on the basis of verbal information from M. Vasić, that the hoard covers the period from Marcus Antonius to Septimius Severus, was correct (Dušanić 1967: 71, n. 93).

6 Gázdac 2002: 499, Map 5, Karajenon, Trajan to Septimius Severus, 78 denarii, tpq. not known; *ibid.*: 516-517, Map 5, Mendén, Trajan to Septimius Severus, (117) 115 denarii, tpq. not known.

and in Upper Moesia is an indication of a relatively peaceful historical period in these provinces. In Upper Pannonia, three hoards were registered, dated to the time of Septimius Severus (Savaria II, Brigetio IV and Mór),⁷ while only the find from the vicinity of Požarevac⁸ is known in the territory of Upper Moesia. The number of hoards increases in Lower Moesia, Dacia and, especially, in the territory of barbaricum, where as many as 27 finds from the time of Septimius Severus were registered.⁹

Čortanovci, located on the slopes of Mount Fruška Gora beside the Danube, belonged to the province of Lower Pannonia at the time of the Roman Empire. Within the administrative organisation of the province, it was in the territory of the Bassianae municipium (nearby present Donji Petrovci) and, subsequently, colony,¹⁰ the northern and eastern border of which was the Danube, the southern – mostly the Sava River, and in the west they bordered on Sirmium.¹¹ Although located on the *Bononia-Cusum-Taurunum* road, which led along the Danube and followed the Srem section of the Roman limes, Čortanovci is not mentioned in itineraries¹² and its ancient name is unknown (Map 1).¹³

7 Găzdac 2002: 499, Map 5, Savaria II, Vespasian to Septimius Severus and family (Julia Domna), 58 denarii, tpq. 196 AD; *ibid.*: 499, Map 5, Brigetio IV, Nero to Septimius Severus and family (Julia Domna), (118) 114 aurei, tpq. 196/211 AD; *ibid.*: 517, Map 5, Mór, M. Antoninus/Vespasian to Septimius Severus and family (Julia Domna, Caracalla and Geta), 65 denarii, tpq. not known.

8 Borić-Brešković, Vojvoda 2010: 21-106.

9 Borić-Brešković, Vojvoda 2010: 22, n. 8-9. In the territory of what was then the barbaricum, in the present-day Starčevo, near Pančeva, a hoard of 249 denarii was unearthed in 1866, covering the period from Vitellius to Septimius Severus: Vitellius (1), Vespasian (6), Domitian (1), Trajan (21), Hadrian (33), Sabina (3), Antoninus Pius (52), Faustina I (31), Marcus Aurelius (39), Faustina II (18), Lucius Verus (13), Lucilla (4), Commodus (19), Crispina (6), Pertinax (1), Septimius Severus (2 illegible), J. Domna (1 illegible), cf. Kenner 1867: 126, 131, 329-33; Таращанин и Таращанин 1951: 224; Васин 2001: 175, n. 1. The find ends with undetermined specimens of S. Severus and Julia Domna, so the tpq. is uncertain. Since the find contains, besides one rare specimen of Pertinax, only a small number of coins of S. Severus and J. Domna, and specimens of Caracalla and Geta are not represented, it can be assumed that these are early Severus' issues, like in the hoard from the vicinity of Požarevac (for the composition of the hoard from the vicinity of Požarevac, cf. Borić-Brešković, Vojvoda 2010: 25, Table 1). The hoard from Starčevo, however, is not included in our statistical study because Kenner's data about the number of pieces in the hoard (249) and the total of coins given according to the periods of rule (251) are not harmonised, and the list of coins does not contain complete information needed for a more accurate analysis of the composition, especially when it comes to Caesarean and imperial issues of the 2nd century.

10 Bassianae most probably developed from a private estate, which expanded its holdings at the expense of the autochthonous population. They became a municipium at the time of Hadrian, and a colony under Caracalla, presumably during his visit to Pannonia in 214 (Dušanić 1967: 71; Milin 2004: 255-256).

11 The Sirmium-Bassianae city border would go along the line Krušedol-Hopovo-Jarak-Petrovci (Dušanić 1967: 70; Душанић 1968: 87, n. 1; Milin 2004: 253, Fig. 2).

12 Milin 2004: 258, n. 61-63.

13 As a possibility, the names *Ad Herculem* or *Castra Herculis* are mentioned (Даутова-Рушевљан, Петровић 1994: 15, No. 3; Петровић 1995: 23; Васић 2003: 146; Јовановић 2006: 119, V-3). The said toponyms are connected with the period of the tetrarchy and linked with Hercules, the protector of the emperor Maximilian Herculio, who was born in the vicinity of Sirmium (Јовановић 2006: 113). Hungarian authors link the military camp *Castra ad Herculem* to the town of Pilismarót, on the right bank of the Danube, between Brigetio and Aquincum (Fülep 1980: 36).

Map 1 - Territory of Bassianae and the location of Čortanovci (after Dušanić 1967)

As for the military organisation of this part of the limes, there is little information, both regarding the identification of certain fortresses and camps, and the issue of the deployment of military troops. Still, on the basis of epigraphic material, one can conclude that several Roman detachments were stationed in Srem in the period covered by the hoard from Čortanovci. From the 1st century on, this was the station of an auxiliary detachment of the II Adiutrix legion, the camp of which is presumed

to have been located in the area of *Caput Bassianense*, a suburb of Bassanae.¹⁴ Most probably, the *coh. I Britannica* was permanently stationed in Titel or Acumincum from the time of Domitian, during the 2nd century the *coh. I Campanorum* camped in Stari Slankamen/Acumincum, the *ala I Ityraeorum* in Surduk/Rittium and the *coh. I Thracum* in Novi Banovci/Burgenae and, during the time of Commodus, also the *ala Pannionorum* with a possible camp in Petrovaradin/Cusum. It is almost certain that these auxiliary detachments remained in the same place until the late 3rd century, while their subsequent destiny is unknown.¹⁵

Numerous ancient traces have been registered in several places in Čortanovci and its vicinity, but they are mostly connected with the period of Late Antiquity. The fortress on the “Prosjanice” locality, also known as the Mihaljevac Forest, archaeologically explored in a lesser scope,¹⁶ seems to have been built in the last decades of the 3rd century, within the reconstruction of the limes under Diocletian, after the barbarians had pillaged this part of the province.¹⁷ It was functioning until just before the end of the 4th century, when it was destroyed by fire and was never reconstructed again.¹⁸

Several hundred metres up from this fortress, the villa of Dr. Radenko Stanković was built between the two wars with the ancient spolia built into the northern façade of the western wing – part of a relief with a presentation of Libera.¹⁹

While reconnoitering the broader area of Čortanovci, performed on two occasions during the 1970s and 1980s, a necropolis was discovered with cremated deceased, in the “Veliki Do” section on the left bank of the Budovar stream. One grave from this necropolis was published, dated to the period from the last quarter of the second to the start of the 3rd century, on the basis of the grave contents.²⁰ Also discovered on the same locality were the remains of Roman provincial ceramics, as well as wall

14 The camp of the auxiliary detachment of the legion *II Adiutrix* should most probably be sought in the locality of Solnok, i.e. in Gradina near Dobrinci, where the suburb of Bassanae, *Caput Bassianense*, was located. This detachment was located in the same place until the time of Diocletian and the division of Lower Pannonia, after which it was returned to its domicile garrison in Aquincum (Душанић 1968: 87-89, 90, n. 23)

15 Душанић 1968: 94-106. *Notitia Dignitatum*, which is a source for the period of Late Antiquity, reads that two legions, the *V Iovia* and *VI Herculea* (*ibid.*: 90-94), were deployed in the province *Pannonia Secunda*, while the old alae and cohorts, which *Notitia* does not mention, were most probably reorganised into new auxilia.

16 The southeastern tower and part of the southern wall were discovered and, on the basis of movable archaeological material, it was concluded that it was built in the second half of the 3rd, or at the beginning of the 4th century (Манојловић 1961: 100; Манојловић 1962: 123-125; Манојловић 1962a: 187-188; Даутова-Рушевљан, Петровић 1994: 13-25).

17 Даутова-Рушевљан, Петровић 1994: 14-15; Сопрони 1980: 222. Besides the movable archaeological material (cf. *supra* n. 16), another proof of this would be the finds of hoards of coins from the vicinity deposited in 273-275 AD (Tulari, Vladimirci, Morović, Sremska Mitrovica) and 282/3 (Donji Petrovci, Prahovo, Šimanovci, Sveleuva), cf. Јовановић 1998: 21-22, map 1.

18 Finds of Roman money range from the period of Claudius II to Gratianus, while one aes of Faustina II represents an exception (Даутова-Рушевљан 1989: 75-76, 80) (cf. *infra*, n. 25-27). Besides coin hoards, a large number of ceramic lamps were found, some jewellery, bone, glass and metal objects (Даутова-Рушевљан, Петровић 1994: 16-19; Даутова-Рушевљан 2007: 341, 347-348, 350-351).

19 A relief slab, perhaps discovered in the exploration performed during the building of the villa, subsequently built into the wall (Бунарџић 2006: 48-49, n. 37, fig. 9 a,b). It was extracted in 1990 and is now kept in the Museum of the City of Novi Sad (*ibid.*: 49, n. 38).

20 Давтова-Рушевљан 1993: 333-340

and floor bricks and mortar, which could be proof of the existence of a villa.²¹ Along the route of the ancient road next to the Danube, from Petrovaradin to Sremski Karlovci and Čortanovci, architectonic remains and graves from the Roman period were discovered in the course of reconnoitering several places. The remains of a villa rustica were discovered in the Bukovac Valley, next to a stream with the same name, as well as a smaller necropolis in the section of Podvezirac, and another villa rustica next to the Raša stream, while the scattered construction material, found together with ceramics on the Rovine hill, possibly represents the remains of a speculus. A similar facility was registered in Sremski Karlovci, and ancient constructed graves were found in the profile of the loess plateau towards the riverbank of the Danube. A little farther, on the left bank of the Stražilovo stream, the remains of a building, probably a villa rustica that was destroyed by fire, were partially unearthed and dated to the 4th century according to the discovered material. Deeper in the interior, next to the Lipovac stream, preserved remains with a square base and an access path were found, which were probably those of a speculus. To the west of this building, in the Kurjakovac area, remains of a villa rustica were found with material that is, once again, dated to the 4th century.²²

The Roman necropolis near Beška, in the vicinity of Čortanovci, with graves of cremated and inhumed deceased, dated by means of the money finds to the period from the end of the third to the first half of the 4th century, is significant testimony of the fact that the autochthonous component was still strong,²³ besides showing that both methods of burial were in parallel use at one time. The graves of cremated deceased were dated by means of the coins of Alexander Severus and Orbiana, while the constructed grave with frescoes, built at the end of the third or at the very beginning of the 4th century, next to a grave that was damaged during its construction, belongs to the oldest inhumed graves.²⁴

Apart from the large hoard of silver Roman money discovered on the property of the Krasojević family, there is little data about other monetary finds in Čortanovci. It is recorded in literature that one aes of Faustina II was found at the Prošjanice locality near the fortress²⁵ and that an antoninianus of Claudius II,²⁶ and 13 pieces of copper coins from Late Antiquity originate from the same locality.²⁷

21 Петровић 1995: 24.

22 Бунарчић 2006: 45-47.

23 The appearance of cremation in Lower Pannonia, the so-called Mala Kopašnica – Sase, and of the Stenjevac type, is connected with the native population, who were the bearers of the La Tène culture in these regions, and indicates a strong autochthonous component (Јовановић 1984: 49-51, n. 136 - Beška).

24 A total of 111 graves of inhumed and cremated deceased were explored, which were dated by coin finds in the period from Alexander Severus to Valentinian and Valens. The most significant find among them is the constructed tomb with frescoes from the period of the tetrarchy (Marijanski-Manojlović 1987: 13, 32).

25 Даугтова-Рушевљан 1995: 130, 133, 139, no. 176 (RIC III, no. 1629).

26 Даугтова-Рушевљан 1995: 130, 139, no. 177 (RIC V, 1, no. 186).

27 Urbs Roma (1), Constantius II (2), Constans (2), Constantinopolis (1), Jovian (1), Gratian (2), Valentinian I (3), Valens (1). The youngest coin among them, minted in Siscia between 379 and 383 (Gratian, cf. RIC IX, 26b), was found inside the tower of the fortress, cf. Даугтова-Рушевљан 1995: 130, 139-140, nos. 178-190.

A HOARD OF ROMAN COINS FROM ČORTANOVCI IN SREM

The find of silver coins from Čortanovci that contains 2457 denarii and 2 drachmae, ranging from Marcus Antonius (BC 32-31), and Nero (64-65 AD), to Septimius Severus (210 AD) and Caracalla under Septimius Severus (210 AD), has the following composition:

A HOARD OF ROMAN COINS FROM ČORTANOVCI IN SREM

Graph 1 – Composition of the find in the Čortanovci hoard in percentages

Table 3 – Annual quotients and percentages in the Čortanovci hoard

Ruler	Reign Year/years (yr/yr) Months (mos)	Frequency No. of pieces	Annual quotient	Annual percentage
Marcus Antonius	32-31 (2 yrs)	52	26	12.50
Nero	64/65-67/68 (4 yrs, 6 mos)	20	4.44	2.13
Galba	68-69 (6 mos)	1	2	0.96
Otho	69 (3 mos)	1	4	1.92
Vitellius	69 (8 mos)	3	4.54	2.18
Vespasian	69/71-78/79 (10 yrs)	225	22.5	10.80
Titus	79-81 (2 yrs, 3 mos)	40	17.76	8.54
Domitian	81-95/96 (15 yrs)	55	3.66	1.75
Nerva	96-98 (1 yr, 4 mos)	24	18	8.65
Trajan	98/99-114-117 (19 yrs, 6 mos)	290	14.76	7.10
Hadrian	117-134/138 (20 yrs, 11 mos)	290	13.8	6.62
Antoninus Pius	138-160/161 (22 yrs, 8 mos)	529	23.28	11.18
Marcus Aurelius	161-179/180 (19 yrs)	306	16.1	7.74
Commodus	180-191/192 (12 yrs, 9 mos)	112	8.76	4.20
Septimius Severus	193-210 (17 yrs, 10 mos)	511	28.56	13.73
	Σ	2459	208.16	100

Graph 2 – Annual percentages in the Čortanovci hoard

Coins of 25 rulers and their family members are present in the find from Čortanovci, spanning 242 years (32/31 BC – Marcus Antonius to 210 AD – Septimius Severus). The coinage of Antoninus Pius and Septimius Severus have the highest percentage (Table 2, Graph 1) and, viewed in total, the highest percentage in the hoard belongs to the 2nd century, i.e. the time from Trajan to Septimius Severus, which accounts for 82.87% of the find. It emerges from this that the biggest part of the hoard was collected during the 2nd century and that the thesaurization, which started during Vespasian, continued under Trajan and Hadrian and was especially intensified in the period of the rule of Antoninus Pius. It then dropped under Marcus Aurelius, came to a significant halt during the time of Commodus and, finally, increased once more at the time of Severus. The coinage of Marcus Antonius and issues until Trajan, would mostly represent the relics of money that was in circulation earlier. When analysing data about the annual inflow into the hoard, we obtain a somewhat different result (Table 3, Graph 2). They primarily relate to the coinage of Marcus Antonius, Titus and Nerva and, to a slightly lesser extent, Vespasian. The difference in the annual inflow is the consequence of a short (of the first three) or somewhat shorter rule (of Vespasian) compared with the duration of rule of the emperors of the 2nd century. The annual inflow for rulers of the 2nd century does not change significantly in relation to their overall percentage share in the find, except in the case of Antoninus Pius and Septimius Severus, whose coinage shows the biggest annual inflow, but this time in the opposite proportion, with issues of the Severan period prevailing.

In our further analysis of the incidence of particular ruler periods in the hoard from Čortanovci, we compared its composition with that of other hoards in the Danube and Balkan provinces, to which it corresponds best in view of the contents.²⁸

The oldest pieces in the find from Čortanovci belong to the legionary denarii of **Marcus Antonius** from 32/31 BC (Cat. 1-52), 23 pieces of which celebrate 14 different legions, while for 29 pieces it was not possible to determine which legion they were dedicated to. In the Danube and Balkan provinces, these denarii are still present in hoards from the 2nd and, sporadically, in those from the 3rd century.²⁹ In the Čortanovci find, they are still present with 2.11%, but with an exceptionally high annual inflow of around 12.5% (Table 2, 3, Graph 1, 2).³⁰

Following are the pieces of **Nero** with a total of 20 pieces and eight different types minted between the years 64/65 and 67/68 (Cat. 53-72). They account for 0.81% of

28 As the Čortanovci hoard was deposited at the very beginning of the 3rd century, it was more appropriate to compare it with the hoards from the 2nd century because, with its composition, primarily reflected in the presence of denarii of Marcus Antonius, it corresponds the most to the hoards of this period. In this regard, hoards of the Danube and Balkan provinces from three horizons were studied – the horizons of Marcus Aurelius, Commodus and Septimius Severus: **Upper Moesia**: the horizon of depositing at the time of Marcus Aurelius (Mrčevac, Nemenikuće, Grocka, Česta, Belgrade Students' Park), the horizon of Commodus (Miroslajci), the horizon of Septimius Severus (vicinity of Požarevac); **Lower Pannonia**: the horizon of Marcus Aurelius (Ušće, Mocsolad, Kurd-Gylaji, Cornacum = Sotin, Mursa = Osijek); the horizon of Commodus (Bela Reka, Radalj); the horizon of S. Severus (Karejenon, Mendén); **Upper Pannonia**: the horizon of Marcus Aurelius (Carnuntum I, Carnuntum II, Witzelsberg, Neunkirchen, Apetlon II, Savaria I); the horizon of Commodus (Prelasko, Vindobona II); the horizon of S. Severus (Savaria II, Brigetio IV, Mór); **Lower Moesia**: the horizon of M. Aurelius (Durostorum IV, Durostorum II, Mokresh, Pavlikeni, Storgosia II = Pleven; Bezhanova); the horizon of Commodus (Bregare, Gruncharovo); the horizon of S. Severus (Adamclisi, Dimum, Durostorum III); **Dacia and the barbaricum**: the horizon of M. Aurelius (Gostavát, Diviciorii Mari, Drăghiceni, Barbura); the horizon of Commodus (Butoiești, Gîrla Mare, Apulum I); the horizon of S. Severus (Lucieni, Făurei, Itești, Mircești, Bacău, Ciolpani, Lujerdiu, Puriceni, Oboroceni, Racova-Chetriș, Măgura, Ghirișa I, Lonea, Ghirișa II, Mastacăn, Sarmizegetusa V, Ardeoani, Alecuș, Avrămești, Iași; cf. Borić-Brešković, Arsenijević 2008: 101-103, Table 2-4, Graph 1-3; Borić-Brešković, Vojvoda 2010: 22-23, n. 10-13 with literature, 27-28, Table 2-6b, Graph 1-5b; Gázdac 2010: Catalogues, Mapes, Plates and Tables on CD; Moneta 73: 194-196; Kos 1986: 77 (for Prelasko); Гавриловић 1840: 116 (for Belgrade). Only finds with a published composition were taken into consideration in the calculation of the average percentage share of ruler periods in these hoards, while those which showed large deviations in composition were excluded because, due to the assumption that they were scattered to a larger extent, they could not provide a realistic picture. Accordingly, we especially point out several hoards that show significant deviations in composition and justify the suspicion that they are largely scattered: from the territory of the barbaricum, the hoards from Ludoš (tpq. Commodus, cf. Bakic 2002: 13-31; Borić-Brešković, Arsenijević 2008: 94, n. 5, Table 4) and Starčevo (cf. *supra*, n. 9), from Upper Moesia, the hoard from Kostolac (tpq. M. Aurelius ?, cf. Arsenijević 2001: 185-201) and from the territory of Thrace, the hoard from Mali Suvodol in the vicinity of Pirot (tpq. Commodus, cf. Borić-Brešković 1996: 43-52; Borić-Brešković, Arsenijević 2008: 94, n. 4, Table 3).

29 They also appear in some finds deposited in the 3rd century: **Upper Moesia**: Niška Kamenica, Niš, NM Belgrade = 3128 AR: Marcus Antonius (8)/Vespasian – Philip I; NM Niš = 3941 AR: Roman Republi? (5)/Nero – Severus Alexander; Supska II, Čuprija 935 AR: Marcus Antonius (1) – Maximinus I (tpq. 236-238); Priboj near Vranje, 11.678 + (?): AR Marcus Antonius (48 of the 3608 studied coins) -- Severus Alexander [+ antoninianii of Valerian I – Gallienus + AE, which do not belong to the original find]; **Lower Moesia**: Lipnik, 619 AR: Marcus Antonius (1) – Trajan Decius (AD 249/250); **Lower Pannonia**: Ercsi, 386 AR: Marcus Antonius (4) – Severus Alexander (AD 228); Börgönd, 587 AR: Marcus Antonius (1) – Severus Alexander (AD 231); **Upper Pannonia**: none; **Dacia**: Frâncești, 1356 AR: Marcus Antonius (2) – Elagabalus (AD 219); Ad Mediam I = Băile Herculane, 444 AR: Marcus Aurelius (1) – Severus Alexander (tpq. unknown).

30 The other two known finds of this horizon from Lower Pannonia, Karejenon and Mendén, contain no money from the period before Trajan. Otherwise, the denarii of Marcus Antonius appear in horizons from the time of Marcus Aurelius and Commodus on the average with 2.65%. In the hoards from Upper Moesia, this percentage

the total find with the annual inflow of 2.13% and are slightly below the average of 1.05% registered in other finds from Lower Pannonia.³¹

The few issues of **Galba** (Cat. 73), **Otho** (Cat. 74) and **Vitellius** (Cat. 75-77) are notably below the average values, registering a 0.04% share for Galba and Otho and 0.12% for Vitellius, while this percentage in finds from Lower Pannonia is 0.33% (Galba), 0.33% (Otho) and 0.59% (Vitellius).³² A piece that should be noted is a rarer denarius of Otho with the reverse legend depicting SECVRITAS PR (Securitas standing to the left, holding a wreath in the right and a sceptre in the left hand).³³

The issues of **Vespasian** and family members are present in the find from Čortanovci with 225 pieces minted between the years 69/71 and 79. Of this number – 182 denarii of 38 different types and one that could not be identified, belong to Vespasian (Cat. 78-259), while 17 pieces - nine types, were minted for Titus (Cat. 260-276) and 26 – eight types, for Domitian (Cat. 277-302). Together, they account for 9.15% of the find, which is within the average for other Danube and Balkan provinces,³⁴ but below the average for the Lower Pannonia hoards where this is 12.24%. With an annual inflow of 10.80%, Vespasian and family are in the fourth place in the Čortanovci find.

The coinage under **Titus** with 40 denarii, of which 26 belong to Titus (Cat. 303-328), seven to Domitian (Cat. 329-335) and seven to the consecrated coinage for Vespasian (Cat. 336-342) participates with 1.63% in the composition of the find and shows a significant annual inflow of 8.54%. It deviates from the average for the Lower Pannonia hoards, which is 1.98%, and from the average registered in hoards from the surrounding provinces.³⁵ Titus' pieces are present with 10 different types, Domitian's with three and the series Divus Vespasianus with two types. One hybrid denarius (or denarius which supplements the series) of Domitian was not registered in RIC (Cat. 335). Its obverse legend, reading CAESAR DIVI F DOMITIANVS COS VII appeared after Vespasian's deification and is dated to the late 80 AD, while the reverse, reading PRINCEPS IVVENTVTIS (Minerva advancing r., brandishing a javelin and holding a shield)³⁶ belongs to an earlier issue from the same year which, on the obverse, still held the filiation AVG F(ilius) instead of DIVI F(ilius).³⁷

is somewhat higher (3.46%), while it is significantly higher in Lower Moesia (8.45%) and, especially, in Upper Pannonia (10.08%), but lower in Dacia and the barbaricum (2.23%).

31 In the hoards from Upper Moesia this percentage is 0.72%, from Lower Moesia 0.93%, from Dacia and the barbaricum 2.18% and it is the highest in finds from Upper Pannonia (4.67%).

32 The notably smaller share of their issues is not only reflected in comparison with the Lower Pannonia hoards, but also with the hoards from the surrounding provinces: Upper Pannonia (0.69% Galba, 0.66% Otho, 1.44% Vitellius), Upper Moesia (0.39%, 0.31%, 0.61%), Lower Moesia (0.40%, 0.25%, 1.20%), Dacia and the barbaricum (0.39%, 0.91%, 1.47%).

33 RIC I: 260: no. 12 – the rarity (frequency) of this specimen is marked as R3.

34 Upper Pannonia (8.32%), Upper Moesia (8,06%), Lower Moesia (10,80%), Dacia and the barbaricum (8,06%).

35 Upper Pannonia (2,21%), Upper Moesia (1,35%), Lower Moesia (2,03%), Dacia and the barbaricum (2,17%).

36 For the obverse, cf. RIC II: 121-122, nos. 48-53; reverse, cf. RIC II, no. 41.

37 According to Kineast, the deification of Vespasian took place between September 8, 79 and May 28, 80, and Domitian became a consul for the seventh time between January 1 and 13, 80 (Kineast 2009: 109, 116). However,

Domitian's independent issues – 55 pieces (Cat. 343-397), 35 different types, three illegible and one that was not registered in RIC (Cat. 358) – were minted between 81/81 and 95/96, with a hiatus from 82 to 87 and, then, with a regular inflow until 95/96. They participate with 2.23% in the composition of the find and with 1.75% in annual inflow. As in the case of independent issues of Titus, what is notable here is a somewhat lower percentage than the average for finds from Lower Pannonia, which is 3.60%. The relation is the same in hoards from other provinces, except in those from Upper Moesia, in which the percentage of Domitian's presence is the lowest.³⁸ One denarius, which is not registered in RIC (Cat. 358) rounds off the II series from the year 88. According to the legends on the obverse IMP CAES DOMIT AVG GERM P M TR P VII and on the reverse IMP XV COS XIII CENS P P P, it is dated as issue II from the year 88,³⁹ while the reverse presentation „Minerva standing left, holding a spear in the right hand“ appears within issue I from the same year and was not registered in issue II.⁴⁰

Nerva is represented with 24 denarii and 16 different types (Cat. 398-421) minted between 96 and 98. With the share of 0.97% in the find and the annual inflow of 8.65%, it deviates minimally from the average value, which is 1.18% in the hoards from Lower Pannonia. Compared with other hoards in the region, Nerva's issues feature the least in the finds from Lower Pannonia.⁴¹

Trajan's issues encompass 289 denarii (Cat. 422-710) and one silver drachma from Lycia in Asia Minor (Cat. 711).⁴² Also belonging to this find is one drachma minted under Hadrian for Sabina in the mint of Amisus, in Pontus (Cat. 997). Besides these two, six more Lycian drachmae,⁴³ four drachmae of Caesarea in Cappadocia⁴⁴ and three drachmae from Amisus,⁴⁵ have been registered in hoards from the territory of Serbia, so far. Trajan's pieces participate in the hoard with 11.80%, with the annual inflow of 7.10%. The percentage of 11.80 is lower than the average for Trajan in other hoards from Lower Pannonia (13.14%); it is the closest to the hoards from Upper

numismatic material confirms the opinion of the authors of RIC that Vespasian was deified after the seventh proclamation of Domitian as consul, in the year 80, and this not immediately after. Namely, „the fact that on some of his coins dated COS VII he is still AVG F and not DIVI F shows that Vespasian was not consecrated till after the beginning of that year“ (RIC II: 121, n. *).

38 Upper Pannonia (5,06%), Upper Moesia (2,13%), Lower Moesia (6,14%), Dacia and the barbaricum (4,25%).

39 RIC II: 167, no. 114.

40 RIC II: 167, no. 110.

41 Upper Pannonia (3,33%), Upper Moesia (1,64%), Lower Moesia (1,68%), Dacia and the barbaricum (2,36%).

42 Borić-Brešković, Vojvoda 2010: 25, n. 19. At the time of Trajan, Lycian drachmae were so widespread (all the way to Britain), probably because they resembled the denarii, although they contained less silver than the denarii (Howgego 1994: 14-15, n. 69).

43 The hoard from Grocka (one drachma of Domitian), cf. Borić-Brešković 2003: 20, n. 15, 19, 30, Cat. 32; Mirosljci (two of Trajan's drachmae), unpublished; Priboj near Vranje (three of Trajan's drachmae), unpublished.

44 Radalj (one drachma of Trajan), cf. Borić-Brešković, Arsenijević 2008: 99, n. 32-34, Cat. 88; Priboj near Vranje (two of Trajan's drachmae and one drachma of Hadrian), unpublished.

45 Kalemegdan (two of Hadrian's drachmae), cf. Црнобрња 2008: 77, Cat. 25-26; vicinity of Požarevac (one drachma of Hadrian), cf. Borić-Brešković, Vojvoda 2010: 25, Cat. 271.

Pannonia, and is somewhat higher in the neighbouring provinces, being the highest in Upper Moesia.⁴⁶ In the group of 287 of his denarii, 96 different types have been registered, in 17 there are variants in the obverse presentations, while two identical denarii (Cat. 656 and 657) supplement the series described in RIC, in which a specimen of this typology only appears as an aureus.⁴⁷

Hadrian's coinage with a total of 289 denarii and one drachma of the mint of Amisus, covers the period between 117 and 138, within which 267 denarii belong to Hadrian (Cat. 712-978), 18 denarii (Cat. 979-996) and one drachma (Cat. 997) to Sabina, one denarius (Cat. 998) to Lucius Aelius and three denarii (Cat. 999-1001) to Antoninus Pius as Caesar. The percentage of Hadrian's issues in the find is equal to those of Trajan (11.80%), but with a lower annual inflow – 6.62%. Its share is the same as that of Trajan, but is considerably below the average for the finds from Lower Pannonia of 15.92%, and for the finds from the surrounding provinces, with the exception of the hoards from Upper Pannonia, where the average is approximately the same.⁴⁸

Among the 267 denarii of Hadrian, there are 103 different types with a large number of known variants, while fewer variants of obverse presentations, not registered in RIC, have been recognised in nine types. Also registered was one already known hybrid specimen (Cat. 978) with the Class E obverse (COS III) and the Class A reverse (COS III).⁴⁹ The group of Hadrian's coinage for Sabina, besides the already mentioned silver drachma of the mint of Amisus, in Pontus (Cat. 997), encompasses 18 denarii and six types, with variants having been registered on the reverse presentation on two pieces. One denarius belongs to Lucius Aelius, and three to Antoninus Pius as Caesar which, at the same time, represent three different types.

Of the denarii from the time of Antoninus Pius (527), 282 specimens were coined for Antoninus Pius himself (Cat. 1002-1283), one is a consecrative coin of Hadrian (Cat. 1284), three were coined for Fastrina I (Cat. 1285-1287), 138 for deified Faustina I (Cat. 1288-1425), one belongs to the joint emission of Antoninus Pius and Marcus Aurelius (Cat. 1426), 75 are of Marcus Aurelius as Caesar (Cat. 1427-1501) and 27 of Faustina II (Cat. 1502-1528). In all, they account for 21.44% in the find, with an annual inflow of 11,18%. In a comparison of their presence in percentages, one can observe that it is again lower than the value in the other Lower Pannonian hoards, which, like in the neighbouring provinces, amounts to 24,74%.⁵⁰

We distinguished 100 types of Antoninus Pius denarii (282), while minor variants on the obverse image were remarked in seven. Two denarii that were not recorded in

⁴⁶ Upper Pannonia (11,93%), Upper Moesia (15,81%), Lower Moesia (12,99%), Dacia and the barbaricum (14,36%).

⁴⁷ RIC II: 267, no. 319 (AU).

⁴⁸ Upper Pannonia (12,08%), Upper Moesia (18,58%), Lower Moesia (16,15%), Dacia and the barbaricum (14,66%).

⁴⁹ RIC II, p. 384, no. 381 (b).

⁵⁰ Upper Pannonia (23,31%), Upper Moesia (24,47%), Lower Moesia (24,83%), Dacia and barbaricum (24,31%).

RIC complete the varieties of the third emission from the year 139, and the third is a variant or hybrid specimen in the emission from 158-159. The first case refers to a poorly preserved denarius (Cat. 1015), with legends on the obverse and reverse that correspond to the specimen in RIC, but the obverse presentation (head laureate right) combined with the sacrificial instruments on the reverse (sprinkler, lituus, ewer and simpulum) is not recorded.⁵¹ Next, comes a denarius (Cat. 1017), which also depicts a different order of priestly symbols (simpulum, lituus, ewer, sprinkler and knife) than the one published in RIC.⁵² The third is a denarius with the reverse legend VOTA SVSCEP - DECENN III COS IIII and the image of Antoninus, veiled, standing left, sacrificing with a patera over a tripod, his left arm at his side, which corresponds to the emission from 158-159 (Cat. 1271), but the obverse inscription, otherwise marked on an aureus and a denarius from the same series⁵³ is ANTONINVS AVG PIVS P P instead of ANTONINVS AVG PIVS P P TR P XXII, while their obverse presentations are the same (head laureate right).⁵⁴

The specimens of Faustina I produced during her lifetime - until 141, are represented by three specimens and two different types. As usual, a much larger number (138) of her coinages were in existence after her death, among which we established 27 types, and in the case of one type there were variants. In this commemorative series, we recorded a denarius (Cat. 1420) with the obverse DIVA AVG FAVSTINA (bust, veiled right) and the reverse PIETAS AVG (Pietas standing front, head left, dropping incense on an altar and holding a box), which appears in RIC only as an aureus.⁵⁵ In the Caesar emissions of Marcus Aurelius (75 denarii, 26 types and 5 variants of the obverse and two variants of the reverse presentations), we singled out a specimen with a hybrid combination (Cat. 1501) with the obverse legend AVRELIVS CAE-SAR AVG PII F COS II (Head, bare, right) and the reverse legend COS DES • II (Honos standing left, holding a branch and cornucopiae). The obverse legend is dated to the period 145-(147?) and refers to aurei, while the reverse, attributed only to the denarii, is dated to 144 (?).⁵⁶ In the emissions of Antoninus Pius for Faustina II (27 specimens, seven types, and in one type a lesser variant of the reverse presentation) an irregular coinage was recorded (Cat. 1528) with the obverse bearing FAVSTINA AVG-TA AVG FIL (sic!) (Bust of Faustina II, draped, right) and the reverse AVG-VSTA (Vesta, veiled, standing left, holding a patera and sceptre). The reverse legend and the presentation correspond to the consecrative issues of Faustina I, while the

51 In the body of RIC III: 31, no. 45, n. 45, the same sequence of sacrificial instruments is mentioned on the reverse, but combined with the other obverse presentation (type a – head, bare, r.).

52 The obverse and reverse legends, like the obverse presentation correspond to the specimen RIC III: 31, no. 46.

53 Cf. RIC III: 61, no. 292 (d) – aureus and no. 292 (e) – denarius (rev. VOTA SOL DECENN II COS IIII).

54 Cf. RIC III: 61, no. 293 (a). A variant with the same obverse inscription is recorded in Cohen, but with the emperor bareheaded (Cohen II, p. 378, no. 1117).

55 RIC III: 74, no. 394b.

56 RIC III: 81, nos. 432, 434, AU (obv.); RIC III: 80, no. 426 (rev.).

obverse legend, and in the case of the regular form of AVGVSTA, does not appear in the official monetary titulature of Faustina I.⁵⁷

The emissions of **Marcus Aurelius** encompass 308 denarii, of which 182 belong to Marcus Aurelius himself (Cat. 1529-1710), 28 to the consecrative coinage for Antoninus Pius (Cat. 1711-1738), 25 to Lucius Verus (Cat. 1739-1763), one to the consecrative coinage for Lucius Verus (Cat. 1764), nine to Commodus as Caesar (Cat. 1765-1773), 52 to Faustina II (Cat. 1774-1825), six to the consecrative coinage for Faustina II (Cat. 1826-1831) and 5 specimens to Lucilla (Cat. 1832-1836). Their share in the find was 12.52% and with a annual inflow of 7.74%. Compared with other finds from Lower Pannonia (21.13%), then, with finds from the other Danubian provinces, the percentage of their share was significantly lower, except in the hoards of Lower Moesia, which show roughly the same ratio.⁵⁸

Within the emissions of Marcus Aurelius (182 denarii, 93 different types with minor variants - five in the obverse and one in the reverse presentation), four specimens complete the series given in RIC. In the first place this refers to a denarius (Cat. 1542) from the group TR P XVII (Dec. 162-Dec. 163), which combines the obverse M ANTONINVS AVG IMP II (head, bare, right) with the reverse CONCORD AVG TR P XVII, in ex. COS III (Concordia seated left, holding a patera and resting left arm on Spes placed on cornucopiae), recorded only with the obverse legend IMP M ANTONINVS AVG.⁵⁹ The other specimens, all from the series TR P XXX IMP VIII (Dec. 175-Dec. 176) can be distinguished by the variants of the reverse legends: one denarius (Cat. 1693) at the end of the reverse legend contains the title P(ater) P(atiae),⁶⁰ while the other two (Cat. 1699, 1700) do not contain it.⁶¹

The consecrative emissions produced for Antoninus Pius (28 denarii, 9 types) do not indicate any deviations from the known kinds, but in the emissions of Lucius Verus (25 denarii, 10 types and one variant) there is a denarius (Cat. 1761) recorded in RIC only in the form of an aureus.⁶² Among the few but diverse Caesar emissions of Commodus (9 denarii, 7 types of which one is a variant) there is a hybrid specimen (Cat. 1773) with the obverse legend L AVREL COM-MODVS AVG (head, laureate, right), which on Commodus' emissions appears at the earliest in the year 178, in a combination with the same reverse type that is also present in his later Caesar emissions, but with different legends. The reverse TR P II IMP II COS P P (Salus seated left, holding a branch; her left arm resting on a chair; at her feet a snake) is

57 Analogy for the type of obverse, cf. BMC RE IV: 515, no. 832; for the reverse, cf. RIC III: 72, no. 371.

58 Upper Pannonia (16.68%), Upper Moesia (29.79%), Lower Moesia (12.90%), Dacia and barbaricum (22.72%).

59 For the obverse, cf. RIC III: 218, no. 62, and for the reverse, cf. RIC III: 218, no. 64.

60 Cf. RIC III: 240, no. 346 (corr. Pax standing not seated as given in Cohen III: 45-46, no. 438 = Pax stg. l., hld. cornucopiae and setting fire to spoils), rev. leg. TR P XXX IMP VIII COS III, in ex. PAX AVG, which on the Čortanovci specimen ends in the title P P.

61 Both specimens correspond to the type RIC III: 241, no. 359 with a difference in the reverse legend which, here, reads TR P XXX IMP VIII COS III, without P P at the end.

62 RIC III: 260, 581 AU.

dated to autumn-December 177 and belongs to the previous series.⁶³ The emissions of Faustina II during her lifetime are represented by 52 denarii and 19 types, one of which represents a variant, her consecrative emissions with six denarii and five types, and coinage for Lucilla by five denarii and four types.

Present in the hoard are the imperial issues of **Commodus** with 112 denarii - Commodus 101 denarii, with 67 types, one of which is a variant (Cat. 1837-1937), the consecrative coinage for Marcus Aurelius of seven denarii, 5 types (Cat. 1938-1944) and for Crispina four denarii, three types (Cat. 1945-1948). Their share in the find comes to 4.55%, and the annual inflow was 4.20%. The Lower Pannonian hoards show a slightly higher percentage of representation (4.78%) and it exceeds the average values established for Commodus in other Danubian-Balkan provinces.⁶⁴

One of Commodus' denarii (Cat. 1855) with the obverse M COMMODVS ANTONINVS AVG (Head laureate, right) and the reverse TR P VIII - IMP - V - COS IIII P P (Roma seated left, holding Victory and spear) is not recorded in RIC. The obverse and reverse legends correspond to the specimens dated to 183, first issue (TR P VIII IMP V), but the type with Roma seated is not registered in this series.⁶⁵

All the denarii in the Čortanovci find up to the Severan period came from the Roman mint, except for two mentioned Asia Minor drachmae. Besides the denarii from the Roman mint, dating from that time are also denarii from the eastern mints - Emesa and Laodicea (67). They were minted during the rule of Septimius Severus and Julia Domna, whereas the specimens of Caracalla and Geta originate from the Roman mint.

The emissions of **Septimius Severus** are the most numerous and encompass 470 denarii (Cat. 1949-2418). Of this number 407 with 108 different types were produced in the Roman mint (Cat. 1949-2355), 46 in the Emesa mint - 21 types and five specimens which are not known in RIC and one of which is a hybrid (Cat. 2356-2401), and 16 in the mint Laodicea ad Mare - eight types and four unknown in the reference literature, along with one hybrid combination (Cat. 2402-2417). One denarius is a barbarian imitation (Cat. 2418). Of the 21 denarii of Julia Domna (Cat. 2419-2439), 16 with 9 types belong to the Roman mint (Cat. 2419-2434), two to the Emesa and Laodicea mints (Cat. 2435-2436) and three to Laodicea (Cat. 2437-2439), while the denarii of Caracalla with 13 types and one hybrid specimen came from the Roman mint (Cat. 2440-2458), as well as a coin of Geta (Cat. 2459). Expressed in percentages, the coinage of Septimius Severus and his family with a total share of 20.79% has a dominant place in the contents of the Čortanovci find, indicating an annual inflow of 13.73%.

63 The obverse corresponds to the type RIC III: 266, no. 649 with the same reverse presentation, but with the legend TR P III IMP II P P which dates the specimen to 178. The reverse with its inscription and image corresponds to the denarius RIC III: 266, no. 647 which is dated to the period autumn - decembar 177 exclusively in combination with the obverse L AVREL COMMODVS AVG GERM SARM.

64 Upper Pannonia (1.58%), Upper Moesia (0.84%), Lower Moesia (3.35%), Dacia and barbaricum (4.59%).

65 The denarius RIC III: 371, no. 49 (= Cohen III, p. 339, no. 49) has on the reverse a presentation of Roma with the same attributes - Victoria and a spear, but Rome is standing to the left, and on the obverse is a different inscription - M COMMODVS ANTON AVG PIVS.

All the varieties in Severus' coinage originated from the eastern mints. In the coinage of Emesa, besides the earlier observed minor variants, (e.g. Cat. 2396 -VG instead of AVG in the obverse legend and Cat. 2401 – the graphs COS II instead of COS II also in the inscription on the obverse), all the new variants belong to group III dated with COS II to 194-5 (?). A hybrid specimen (Cat. 2397) was also included in this group. Among the denarii (Cat. 2365) a new combination of the obverse legend was recorded IMP CAE L SEP SE-V PERT AVG II C (head laureate, right) and on the reverse BONI - EVENTVS (Bonus Eventus standing left, holding a basket of fruit and corn-ears), in each case known in group III. Namely, along with this reverse, earlier, the variant was noted in the obverse inscription that ended with AVG COS II, while the same obverse (obv. ends in AVG II C) appeared in the specimen with the reverse CERER FRVGIF COS.⁶⁶ The same applies to the next denarius (Cat. 2366) which has the same obverse as the previous one and the reverse CERER FRV-G II COS (Ceres standing left, holding corn-ears and a torch), where the obverse corresponds to one, and the reverse to the other type that is known in RIC and both belong to the same series from 194-5 (?).⁶⁷ The obverse IMP CA L SEP SEV PER AVG COS II (head laureate, right) and the reverse FORT R-EDVC (Fortuna (Hilaritas) standing left, holding a long palm and cornucopiae) on the specimen (Cat. 2372) were not registered in the given combination, even though they were included with the other obverse, and also reverse typology in the issues of Severus' group III.⁶⁸ Another unknown combination of obverse and reverse from the same group was noticed on the specimen Cat. 2375. Here, along with the obverse IMP CAE L SEP SE-V PERT AVG II CO (head laureate, right) the reverse (Fortuna (Pietas) standing left, sacrificing out of a patera over an altar and holding a cornucopiae) appears with a variant of the legend FORTVN-AE REDVCI, established earlier on a denarius from the hoard „Réka Devnia”.⁶⁹ In the case of the denarius Cat. 2397 with the obverse IMP CAE L SEP SE-V PERT AVG COS I (head laureate, right) and the reverse VICT AVG (Victory advancing left, holding a wreath and palm), the obverse corresponds to the rare denarii with COS I from the year 193 - Group II,⁷⁰ and the reverse to the III series from 194-5?, dated with COS II.⁷¹ This involves a hybrid combination, or, which is less probable, the introduction of a new reverse type in Group II.

66 RIC IV/1, – ; ad RIV IV/1, Group III; for rev., cf. RIC IV/1: 140, no. 369, obv. ends AVG COS II; for the same variant of legend on the obverse, which ends with II C, cf. RIC IV/1: 141, no. 370B (rev. CERER FRVGIF COS), Budapest.

67 Obverse, cf. RIC IV/1: 141, no 370B; reverse, cf. RIC IV/1: 141, no. 370A.

68 For the obverse, cf. RIC IV/1: 145, no. 404 (a), 406 (b). With the reverse legend FORT REDVC several different types of Fortuna appear, but the Fortuna recorded in Cohen is the most similar to the Čortanovci specimen, Cohen IV, p. 21, no. 158 (obv. IMP CA L SE SEVER AG (sic!) COS II), cf. RIC IV/1: 142, no. 382 note. In the description of her attributes, H. Cohen, as opposed to the authors of RIC, does not mention a long palm, but only « une longue corne d'abondance ».

69 For the obverse, cf. RIC IV/1: 140, no. 366 (a) (rev. BONAE SPEI), and for the rev., cf. RIC IV/1: 143, no. 385 note (obv. IMP CAE L SEP SEV PERT AVG COS II).

70 For group II from 193, cf. RIC IV/1: 138-139 with note: »The reading COS I is unusual, though not perhaps unprecedented. Also, the title for AD 193 regularly omits COS . (as in Group I).«

71 The obverse legend reads IMP CAE L SEP SEV PERT AVG COS II, cf. RIC IV/1: 148, no. 424.

Among Severus' issues from Laodicea ad Mare on two denarii (Cat. 2404 i 2405) with the reverse ARAB ADIABENIC, the obverse legend ends with the clearly legible IMP VII (195-196), replying affirmatively to the question of the author in RIC in the note beside this type „Is IMP VII on the obv. correct? IMP IIII?”⁷² At the same time, on the reverse of Cat. 2404, Victory holds a palm branch (not trophy) and on the reverse of Cat. 2405, the trophy in the hand of Victory is not visible or does not exist (?). Minor deviations were also established in the denarius Cat. 2406 on which, at the end of the obverse legend, instead of IMP VII, we see IM VII, and then in one denarus on which in the reverse legend, we see MONET – AVG, with the G in AVG (Cat. 2409) stamped like "S".

Among the new variants in the coinage of Laodicea ad Mare we include the denarius of Severus Cat. 2403 (obv. L SEPT SEV PERT - AVG IMP I-I, head laureate, right; rev. FORT R-D-EVC (sic!), Fortuna standing left, holding a cornucopiae in each hand), which complements group III dated to the year 194. The specimens of this obverse type, along with the same reverse legend are known in group III, but the image of Fortuna differs. The type of Fortuna, like on the Čortanovci denarius, according to the authors of RIC, appears later in the scope of the first emission from 196/197.⁷³

The series from 195-196 (?) with IMP VII on the obverse is completed with the denarius Cat. 2407 in which the reverse shows a combination of the inscription and the image, which were so far separately noted in the first group from 196-7, dated with IMP VIII.⁷⁴

The deviation in the denarius with the obverse L - SEPT SEV PE-RT AVG IMP VIII (head laureate, right) and reverse INVICT - • - IMP (trophy and arms) (Cat. 2408) lies in the fact that its obverse belongs to the emission from 196-7, and the reverse, with a small difference in the inscription, is like the type of denarius, which in the coinage of Laodicea is recorded only in group II from 193.⁷⁵

The denarius Cat. 2416 based on the inscription on the obverse L SEPT SEV AVG IMP - XI PART M-AX (head laureate, right) is part of Severus' issues from 198-202, in which, however, the reverse type FORTVN – R-EDVC (Fortuna standing left, holding a rudder and cornucopiae) does not appear.⁷⁶ This reverse, but with a different abbreviated legend (FORT REDVC), sometimes with irregular lettering (FORT RDEV), appears with the previous issues of this ruler with IMP I, IMP

72 RIC IV/1, p. 154, no. 466.

73 For the obverse, cf. RIC IV/1: 151-153; the reverse legend corresponds to the denarii RIC IV/1: 152, nos. 449A, 450, 451, but with the image of Fortuna standing or sitting, with a cornucopiae and a sceptre in her hands, or seated, holding a rudder and a cornucopiae. For the type of Fortuna as presented on the Čortanovci denarius, cf. RIC IV/1: 155, no. 477A (obv. L SEPT SEV PERT AVG IMP VIII, rev. FORT REDVC), First Group, AD 196/197.

74 Ad RIC IV/1: 155, no. 469, obv. L SEPT SEV - []RT AVG IMP VII, Head r., laur. (but reverse FORT REDVC, Fortuna stg. l., hld. rudder and cornucopiae); rev. FORT-A – REDVC, Fortuna (Hilaritas) stg. l., hld. long branch and cornucopiae (for rev. legend, cf. RIC IV/1: 155, no. 479, for type, cf. RIC IV/1: 156, no. 479A (a-b)).

75 For obverse, cf. RIC IV/1: 155-157 (196-7); reverse, cf. RIC IV/1: 151, no 441A – legend INVICTO IMP.

76 Obverse, cf. RIC IV/1: 159-162 (198-202 A.D.); reverse presentation corresponds to RIC IV/1: 155, no. 477 (196/197 A.D.), but legend FORT REDVC.

II, IMP VII and IMP VIII in the obverse inscription.⁷⁷ The same type of reverse, however, is registered in the coinage of Emesa with COS I and COS II on the obverse from 193 and 194-5 (?).⁷⁸ In Julia Domna, a denarius with FORTVN REDVC, on which Fortuna with the same attributes is seated, is classified as an issue in „Mints of Emesa and Laodicea” and dated to the interval 193-196 (?).⁷⁹ The specimen could represent a hybrid, in which the variant of an earlier reverse type of Septimius Severus is used, than the regular issue, or, perhaps, a hybrid combination with the obverse of Laodicea and the reverse of Emesa.

Also recorded in the group of Severus’ issues, was a barbarised denarius (Cat. 2418) with an obverse that was typologically similar to the coinage of Laodicea [] – PERT AVG IMP I[?] (head laureate, right) dated to (193?)/194. The reverse S P Q R OPTIMO PBINOOI (sic!) (Severus on a horse pacing left, holding a spear), with irregular lettering, contains a presentation that would have an analogy in the coinage of Emesa from approximately the same time.⁸⁰

Among the denarii of Julia Domna and Geta, are no digressions from the known kinds, whereas among the specimens of Caracalla, one hybrid coin does appear (Cat. 2458) with the obverse of Caracalla - ANTONINVS - PIVS AVG (bust draped, head laureate, right), dated to the year 205, and later, and with the reverse of Septimius Severus P M TR P XIII COS III P P (Jupiter standing left, holding a thunderbolt and sceptre, at his feet an eagle) dating from 205.⁸¹

The horizon of the hoard from the period of Severus in Lower Pannonia, besides Čortanovci, encompasses only two more hoards, the structure of which essentially differs from the find in Čortanovci. Apart from the fact that they do not contain money from the 1st century, both have lower percentages of Severus’ emissions as a result of the circumstance that they end in a small number of Severus’ specimens without the participation of members of the family - Karejenon (2,64%) and Mendén (0,97%). Hence, regardless of the fact that the date of the latest emissions is not known to us, the assumption is that they were buried at the beginning of Severus’ reign. On the other hand, in considering all three Lower Pannonian hoards together, the total average representation of Severus’ issues in them comes to 8.13%, thanks to the exclusively high values recorded in the case of Čortanovci (20.79%).

77 Cf. RIC IV/1: 151, no. 440 – FORT REDVC (AD 193), 152, nos. 448 a-b - FORT REDVC, FORT RDEVC (sic!) (AD 194), 155, no. 469 – FORT REDVC (AD 195-6), 155, no. 477 – FORT REDVC (AD 196-7)

78 Cf. RIC IV/1: 138, no. 2 (AD 193), 142, no. 377 (AD 194-5 (?)).

79 RIC IV/1: 176, no. 624 (AD 193-196 (?)).

80 The obverse perhaps belongs to group II from 193, or, most probably, group III from 194 (cf. RIC IV/1: 150-153), and the reverse presentation has an analogy in a denarius from the Emesa mint from 194-195 with a regularly shaped legend OPTIMO PRINCIPI, cf. RIC IV/1: 147, no. 415.

81 For Caracalla’s obverse, cf. RIC IV/1: 225 sqq., mint of Rome, for the reverse of Septimius Severus, cf. RIC IV/1: 117, no. 196, mint of Rome.

The finds from Upper Pannonia offer an entirely different picture: Savaria II (5.17%), Brigetio IV (5.26%) and Mór (56.93%), which for Severus comes on average to a high 22.45%. Of the three known hoards, two do not contain coins from the 1st century and besides the specimens of Septimius Severus, they include only the coinage of Julia Domna (Savaria II and Brigetio IV). The hoard from Mór, nevertheless, ranges from the denarii of the Republic to specimens of all the members of the Severus family, but its tpq. unfortunately, is unknown to us. Savaria II is dated earlier, to 196, and Brigetio IV broadly - to the period between the years 196 and 211 - and probably closer to the year 200, given the 5.26% share of coins of Septimius Severus and Domna.

From the territory of Upper Moesia, only one find from the neighbourhood of Požarevac (tpq. 198 or 199-200) belongs to this horizon of burial, in which the coinage of Septimius Severus is represented only by 0.66%.

From Lower Moesia, three finds are known from this horizon: Adamclisi (5.17%; tpq. 204), Dimum (0.67%; tpq. unknown) and Durostorum III (53.03%; tpq. unknown), which amounts to 19.62% of the average representation of coins belonging to Septimius Severus in the finds. These hoards are more similar in content to the Čortanovci hoard, because they all contain coins of the 1st century, in two (Adamclisi, Durostorum III) the coins of all the members of the family are present, and in the third (Dimum), only those of Julia Domna. However, except for the Adamclisi find (204), the other two are undated.

The hoards from Dacia and barbaricum are dated in the majority of cases to an earlier period 193-198, contain coins of the 1st century and end with specimens of Severus, and more rarely with those of Julia Domna. The two which are dated slightly later, but more broadly, also contain the coins of Caracalla as Caesar (Sarmizegetusa V, tpq. 201-206 and Ardeoani, tpq. 201-206). The percentage of the representation of Severus' emissions ranges from 0.13% to 4.76%.⁸²

Based on the material published so far and the comparisons that have been made, we may conclude that the hoard from Čortanovci according to its content is quite distinct from the other finds deposited in the time of Septimius Severus in the territory of the Danubian provinces. The „accuracy” of this statement is provisional because a number of the hoards have not been published in their entirety and we do not possess a full knowledge of their contents nor do we know the precise dating of the latest emissions, so that even the results that were obtained cannot be final. In any case, it can be remarked that the end of the reign of Septimius Severus represents the turning-point in the saturation and that the hoards deposited during the 2nd century and the others, by the year 211, give a different picture of the composition from the

82 Only the Lonea hoard deviates from this frame, in which that percentage amounts to 25%, but it involves a scattered find with only eight specimens ranging from Nero to Septimius Severus so that this percentage is not a realistic indicator.

hoards deposited later, during the 3rd century, when thesauration began principally in the time of the Antonines.⁸³

Three denarii from the Roman mint of Septimius Severus with the obverse legend SEVERVS PIVS AVG BRIT belong to the latest specimens in the hoard from Čortanovci. Thanks to the inscription on the reverse - P M TR P XVIII COS III P P (Jupiter), the authors of RIC date one to the second series from 210 (Cat. 2309),⁸⁴ while they include the other two in the undated emission from 210-211. Both undated specimens have the reverse legend VICTORIAE BRIT, which, in one case, is accompanied by the image of Victoria with a wreath and a palm leaf (Cat. 2354),⁸⁵ and in the other, the presentation of Victoria writing on a shield (Cat. 2355).⁸⁶ The obverse titulature on the latest denarius of Caracalla also contains the victorious title BRIT(annicus) - ANTONINVS PIVS AVG BRIT, and the inscription VICTORIAE BRIT appears again on the reverse with the image of Victoria with a wreath and a palm leaf (Cat. 2457).⁸⁷ The authors of RIC, however, date it to the interval 210-213. A broader chronological framework like this causes confusion in terms of making a distinction between the series that are attributed to the coinage of Caracalla under Severus, and the coinage of his sole rule. The dilemma was later solved by Ph. Hill, singling out five emissions issued during 210: Issue 1 (Jan.), Special Issue (Victories in Britain 1), Special Issue (Victories in Britain 2), Special Issue „Imperial Concordia” and Issue 2.⁸⁸ Bearing in mind Hill's chronology, the latest specimens from the Čortanovci find would be dated to the year 210 and classified in Issue 1 (Jan.) - Severus' denarius with TR P XVIII⁸⁹ and in a separate emission - Special Issue (Victories in Britain 2) - two of Severus and one of Caracalla's denarii with the victory title BRIT on the obverse and the reverse inscribed with VICTORIAE BRIT.⁹⁰ Thus, the year 210, also the year during which Severus' conducted his second British campaign, would represent the earliest *terminus a quo* of burying the find from Čortanovci.

Before his departure for Britian, Severus took steps for Rome and the rest of the Empire to remain loyal and secure during his absence. There are certain intimations of trouble recorded in two inscriptions, one undated and the other from the year 208 which suggest that a rebellion was crushed.⁹¹ They may refer to a rebellion by deserters in Gaul, which was crushed by the legatus of *I Minervia* legion with troops collected from all four Germanic legions. The dedication of the governor of Upper Pannonia

91 The inscriptions originate from mutually distant places, from Ephesus in Asia and Sicca in Africa, but both, in a similar manner, convey the idea of “insidious plots”, cf. Birley 2002: 176.

from Arrabona dated to 207 and dedicated to the „victory of the emperor and the legion *I Adiutrix*” would also point to certain conflicts in the central part of the Danube or in the immediate vicinity.⁹² Although we do not have detailed reports about Severus’ British expedition, it is mainly accepted that the *Profectio Augstormum* was in the spring of 208,⁹³ and that the military operations themselves took place in two campaigns - in 209 and in 210. The first was conducted by Septimius Severus and Caracalla, while the second was led by Caracalla himself, due to the emperor’s deteriorating state of health.⁹⁴ After the completion of military operations in 209, Geta received the title of Augustus,⁹⁵ and at beginning of 210, all three augusti assumed the title of *Britannicus Max(imus)*,⁹⁶ celebrating this also with the special monetary series *Victoria Britannica*⁹⁷ of which two series were with four denarii (three of Severus and one of Caracalla) represented in the find from Čortanovci. However, at the start of 211, on 4 February, Septimius Severus died, and Caracalla, consolidating the border at Hadrian’s wall, made peace with the enemy and immediately began preparations for the return to Rome.⁹⁸

The period of Severus was mainly peaceful in Pannonia and neighbouring Moesia. Had the situation been otherwise, the *vexillationes* of the Danubian legions would not have been able to take part in the British campaign, and apart from the Rhine and Danube land forces, the fleets of the Rhine and Danube were also engaged in this expedition.⁹⁹

The only barbarian invasion in Pannonia occurred in 212 or at the beginning of 213, in the time of Caracalla and was most probably the principal reason for the emperor’s visit to the province in the following year, in 214.¹⁰⁰ However, certain tensions were felt in the final years of the 2nd century, primarily connected with the migration of the Goths, which had the effect of moving the population in the regions of the lower Danube and the Carpathian Basin. Numerous hoards of coins in Dacia and barbaricum from the time of Septimius Severus confirm this. Dacia was under the greatest threat, but the pressure was also felt in Pannonia. It is possible

92 Birley 2002: 176.

93 Kienast 2009: 157.

94 Birley 2002: 180, 186.

95 Kienast 2009: 166.

96 S. N. Miller u CAH XII: 41 advocates the view that after completing the war operations in 209, all three augusti assumed the title *Britannicus* at the same time when Geta received the title of Augustus, but this title does not appear on coins before 210; Birley 2002: 180 summarising present knowledge, suggests early 210 and points out »furthermore, VI *Victrix*, and perhaps the other legions, became *B (ritannica)*.« According to Kienast 2009: 158, 163, 166, Geta received this victory title at the end of 209, or in 210, and Septimius Severus and Caracalla, in 210.

97 Birley 2002: 180.

98 In the view of S.N. Miller in CAH XII: 41, n. 7 Septimius Severus at the start of 211 planned the return to Rome, but the trouble in Britain was still not over. During the preparations for new operations, he died. He heralded his intention to leave Britain by minting the coin “Fortuna Redux” (RIC IV/1, nos. 246, 246 A), while it is assumed that the type “Adventus Augusti” (RIC IV/1: 133, no. 330) also anticipated his intention to make a swift return; CAH XII (2nd ed.): 8-9.

99 Birley 2002: 175, and n. 9. According to Anthony Birley the formulation in one inscription (CIL VI, 1643) seems to imply that an unknown prefect of the *classis Britannica* was at the same time the commander of the *classe Germanica, Pannonica i Moesica*.

100 Mócsy 1974: 198.

that Septimius Severus did not undertake any serious action in Pannonia until he had settled accounts with Claudius Albinus and had subsequently appointed the renowned and twice decorated general T. Claudius Claudianus as governor of Lower Pannonia. In the period between 196 and 200, the Romans renewed smaller sections of the limes in Pannonia and the *I Adutrix* legion took part in the defence of Dacia. From the time of Septimius Severus' visit to Pannonia in 202 till his death, no unrest at all was recorded in this part of the limes. He endeavoured to restore Pannonia from the destruction caused by the Marcomannic wars, to consolidate life in the province and secure conditions for economic progress.¹⁰¹

In seeking the reasons for the deposition of the hoard from Čortanovci, the latest specimens of which lead us to conclude that the year 210 was the *terminus a quo* of its burial, we can say that it just might have been because of the danger of a barbarian incursion. Data on the finds and archaeological sites from the Roman period in the broader neighbourhood of Čortanovci indicate that this part of the Pannonian limes and its hinterland was densely populated, with numerous villas, important agricultural properties and large estates.¹⁰² To this one should add numerous small and large camps and other military facilities along the route beside the Danube. The natural resources, such as the fertile soil, the sunlit slopes suitable for the cultivation of grapes, forests that were the source of building material but also offered favourable conditions for hunting, and rivers for fishing and, what is most important, for transport, favoured the economic progress of the population. The villas and large estates, as individual and independent units, had their own role to play in economic life and supplying the province.¹⁰³ In short, it is hard to find an answer for the real reasons for the deposition of such a large find at a time when the province was prospering. One should seek the answers to lie, more likely, in some private reasons, for instance, in the collection of taxes, action by raiders, or the increased movement of the population connected with the deployment of military units. Among them, although only in the domain of speculation, we may rely to some extent on the well-known large-scale confiscations of land holdings, high taxes, and changes in the system of administration carried out during the reign of Septimius Severus.

NOTES TO THE CATALOGUE

The catalogue is arranged chronologically according to the reigns of the Roman emperors, and in the context of individual emperors, by mints.

Each catalogue number contains only the standard basic data, arranged according to the following criteria: the numbers referring to the individual reigning emperor, and the members of the imperial family, living or deified; technical data about the coin (weight, diameter, and axis), the citation according to the standard literature together with additional notes on the coin, the minting year, and the inventory number.

The notes contain additional information on coins and detailed citations of possible aberrations to examples documented in the standard literature. The term „var.” is used after the standard citation to mark some minor differences between the coins published in the present catalogue and those in the standard literature (i.e., busts or legends). If the legend or type fundamentally differs from the citation in the standard literature, it is followed by the mark „ – ”, then the mark „ ad ..”, and the number of the standard reference most closely corresponding to the published coin. In cases in which a coin is unknown in the standard literature, the mark „ – ” is used, and the obverse and reverse are described in detail.

The date of minting of individual coins follows the chronology based on the relevant cited literature.

All the coins are presented in photographic form, and their numeration on the plates is coordinated with the catalogue numbers.

The following abbreviations are utilized in the catalogue:

ОСТАВА РИМСКОГ НОВЦА ИЗ ЧОРТАНОВАЦА У СРЕМУ

Резиме

Кључне речи: Римско царство, остава новца, Принципат, Септимије Север, Чортановци, Доња Панонија

Остава римског новца из Чортановаца у Срему садржи 2457 денара, једну ликијску и једну драхму исковану у понтској ковници Амисус. Откупљена је за Народни Музеј у Београду почетком 1933, али није извесно да је у пуном саставу дошла у Музеј. Најстарији примерци су денари Марка Антонија (32-31. п.н.е.), односно Нерона (64-65), а најмлађи Септимија Севера и Каракале под Севером, датовани у 210. Трећа је позната остава са територије римске провинције Доње Паноније из Северовог времена. У Горњој Панонији забележене су три, на територији Горње Мезије једна, док се њихов број умножава у Доњој Мезији, Дакији и посебно барбарикуму (27).

Чортановци су познати по римском војном логору на дунавском лимесу, али њихово римско име није познато. Припадали су територији Басијана. Новија истраживања и рекогносцирања овог терена показала су да у околини кастела и на траси пута уз Дунав, од Петроварадина преко Сремских Карловаца до Чортановаца, постоје виле рустике и други остаци из римског доба, који се углавном везују за време касне антике. Осим велике оставе сребрног римског новца, мало је података о другим монетарним налазима. Један ас Фаустине II нађен је на локалитету Просјанице у близини кастела и са истог локалитета потичу антонинијан Клаудија II и 13 примерака касно-античког бакарног новца.

У налазу из Чортановаца присутан је новац 25 владара и чланова њихових породица у распону од 242 године (32/31. п.н.е. - 210. н.е.). Анализа процентуалне заступљености показује да је највећи део оставе прикупљен током II века (82,87%) и да је тезаурација, започета у време Веспазијана и настављена под Трајаном и Хадријаном, била нарочито интензивирана за владавине Антонина Пија. Под Марком Аурелијем бележи пад, показује значајнији застој у Комодово време и нови узлет у доба Севера. Ковања Марка Антонија и издања до Трајана представљају углавном реликте ранијег оптицајног новца (Table 2, Graph 1). Подаци о годишњем приливу у оставу разликују се када је реч о ковању Марка Антонија, Тита и Веспазијана због њихове краткотрајне или краће владавине у поређењу са дужином владавине царева II века. Годишњи прилив за владаре II века се не мења битно у односу на њихову укупну процентуалну заступљеност осим код Антонина Пија и Септимија Севера, који показују највећи годишњи прилив, али сада у обрнутом односу и са превагом издања из северијанског раздобља (Table 3, Graph 2).

Најстарији примерци у налазу су легионарски денари Марка Антонија из 32/31. п.н.е. (52), а следе Неронови (20) ковани између 64/65. и 67/68. Малобројна издања Галбе (1), Отона (1) и Вителија (3) осетно су испод просечне заступљености у осталим оставама подунавско-балканских провинција које обухватају сличан временски интер-

вал. Издања Веспазијана и породице (225) у оквирима су просека, самостална Титова (40) испод просека, слично као и Домицијанова (55), кована између 81/82. и 95/96. и са хијатом од 82. до 87. Нерва (24) одговара средњим вредностима за његове емисије у подунавским оставама. Трајанова издања (289 денара и једна драхма малоазијске Ликије) заступљена су у истом броју као Хадријан и породица са разликом што је Хадријанова драхма за Сабину кована у понтској ковници Амисус. У оставама са територије Србије забележено је досада још шест ликијских, четири драхме Цезареје кападокијске и три драхме Амисуса. Хадријаново учешће је у већој мери него код Трајана испод просека за подунавско-балканске налазе, изузимајући горњопанонске са сличним просеком. Процентуална заступљеност Антонина Пија и породице (527) је поново нижа од вредности у осталим оставама, као и Марка Аурелија (308), која је још нижа осим код остава из Доње Мезије, док су Комодова царска издања (112) у границама просека за доњопанонске налазе, али надмашују вредности у другим подунавско-балканским провинцијама.

Најбројнија су издања северијанског раздобља (511) и од тада се поред денара из римске ковнице појављују и денари из источних ковница - Емесе и Лаодикеје (67), кованы за Септимија Севера и Јулију Домну.

До северијанских емисија, осим једног већ познатог хибридног примерка (Хадријан – кат. 978), уочено је више варијетета незабележених у референтном корпусу *Roman Imperial Coinage*: већи број варијанти, углавном у аверсној представи или примерци који нису правилно описани (Трајан, Хадријан, Антонин Пије и породица, доба Марка Аурелија, Комод); неколико хибридних денара (цезарска издања Марка Аурелија – ат. 1501 и Комода – кат. 1773) или хибрид/денар који употребљује серију (?) (Домицијан као цезар – кат. 335); денари који показују да је исто ковање у злату имало пандан и у сребру (Трајан – кат. 656, 657, деинфикована Фаустина I – кат. 1420, Луције Вер – кат. 1761); типови незабележени у референтном корпусу (Домицијан – кат. 358, Антонин Пије – кат. 1015, 1017, 1271, Марко Аурелије – кат. 1542, 1693, 1699, 1700, Комод – кат. 1855); нерегуларно ковање (А. Пије за Фаустину II – кат. 1528). Поред мањих варијанти већ присутних у RIC-у (кат. 2396, 2401), највише нових типолошких комбинација појављује се у Северовом ковању и готово све потичу из источних ковница: Емеса – непознати у референтном корпусу (кат. 2365, 2366, 2372, 2375), хибридни примерак (кат. 2397); Лаодикеја – варијанте (кат. 2406, 2409), непознати у референтном корпузу (кат. 2403, 2407, 2408), хибрид или регуларно ковање (кат. 2416); варварска имитација (кат. 2418). Међу примерцима римске ковнице јавља се још једна хибридна врста са аверсом Каракале и реверсом Септимија Севера (кат. 2458).

Хоризонт остава из раздобља Септимија Севера у Доњој Панонији, осим чортановачке, обухвата само две оставе битно другачије структуре: не садрже новац I века и обе се завршавају малим бројем Северових примерака без учешћа чланова породице због чега показују ниске процене његових емисија - Карејенон (2,64%) и Менден (0,97%). Низак проценат (0,66%) бележи и налаз из околине Пожаревца, једини са територије Горње Мезије и датован у прву деценију Северове владе (tpq. 198. или 199-200). С друге стране, врло високе вредности показују оставе из Горње Паноније (22,45%) и Доње Мезије (19,62%), док се у оставама из Дакије и барбарикума, датованим углавном нешто раније (193-198) проценат Северових издања креће од 0,13% до 4,76%.

На основу изведене анализе може се условно закључити (за један број остава не располажемо потпуним подацима о њиховом садржају и датовању) да се остава из Чортановца по саставу издаваја од других налаза Северовог хоризонта са простора подунавских провинција. Запажа се да крај његове владавине представља преломну

тачку у тезаурацији и да оставе похрањене током II века и остале до 211. имају другачију структуру од остава закопаних у каснијим годинама III века када тезаурација започиње углавном у време Антонина.

Најмлађим емисијама у остави из Чортановаца припадају три денара Септимија Севера из римске ковнице са аверсном легендом SEVERVS PIVS AVG BRIT. Аутори RIC-а примерак са реверсом P M TR P XVIII COS III P P (Јупитер) датују као другу серију из 210 (кат. 2309), док друга два са реверсом VICTORIAE BRIT (Викторија) укључују у недатовану емисију из 210-211 (кат. 2354, 2355). Најмлађи денар Каракале који у аверсној титулатури садржи такође назив BRIT(annicus), а на реверсу представу Викторије и исти натпис VICTORIAE BRIT (кат. 2458) везују за интервал 210-213. Према новијој хронологији Ф. Хила, који је издвојио пет емисија издатих током 210, најмлађи примерци у овом налазу били би датовани у 210. и разврстани у 1. емисију (јан.) - Северовденар са TR P XVIII и у посебну емисију (Victories in Britain 2) - два Северова и један Каракалин денар са победничким називом BRIT на аверсу и реверсом VICTORIAE BRIT. Тако би 210. година, уједно година током које је вођена друга Северова британска кампања, представљала најранији *terminus a quo* закопавања налаза из Чортановаца. Септимије Север, Каракала и Гета су добили титуле *Britannicus Max(imus)* већ почетком 210, прослављајући и посебним монетарним серијама успехе на британском тлу од којих су две присутне у налазу из Чортановаца. После Северове смрти 4. фебруара 211. Каракала је склопио мир са непријатељем и почeo припреме за повратак у Рим.

У тражењу повода за похрањивања оставе из Чортановаца мала је вероватноћа да је реч о некој опасности од варварског упада. То је време просперитета провинције током којег је Септимије Север настојао да Панонију поврати од уништења изазваних Маркоманским ратовима и обезбеди њен економски напредак. Одговоре би, највероватније, требало тражити у неким приватним разлозима, убирању пореза, деловању пљачкаша или повећаном кретању становништва повезаном са честим размештањем војних јединица. Међу њима, иако само у сфери претпоставки, известан ослонац налазимо у познатим великим конфискацијама земљишних поседа, високим таксама и променама у систему управљања спровођеним за време владавине Септимија Севера.
